MODULE 1

Chapter 1 : Governors 1-1 to 1-43

Governors : Introduction to Centrifugal and Inertia governors, Study and Force analysis of Porter and Hartnell governors including Performance characteristics, Governors effort and power.

1.1 Introduction 1-2

1.2 Comparison between Flywheel and Governor 1-2

1.3 Types of Governors 1-3

1.4 Centrifugal Governor 1-3

1.5 Inertia Governor 1-4

1.6 Terminology used in Governor 1-4

1.7 Watt Governor 1-5

1.7.1 Limitations of Watt Governor 1-6

1.8 Porter Governor 1-8

1.8.1 Effect of Friction 1-8

1.9 Proell Governor 1-16

1.9.1 Difference between Watt, Porter and Proell Governor 1-17

1.10 Hartnell Governor 1-18

1.10.1 Spring Stiffness (p) 1-19

1.10.2 Effect of Friction 1-19

1.11 Performance Characteristics of Governors 1-24

1.11.1 Sensitiveness of Governor 1-24

1.11.2 Stability of Governor 1-25

1.11.3 Isochronous Governor 1-25

1.11.4 Hunting of Governors 1-25

1.12 Governor Effort and Power 1-26

1.12.1 Effort and Power of Porter Governor 1-26

1.12.2 Effort and Power of Hartnell Governor 1-27

1.13 Controlling Force 1-30

1.13.1 Controlling Force Diagram for Porter Governor and its Stability 1-30

1.13.2 Stability of Spring Controlled Governor 1-31

1.14 Insensitiveness of Governors (Effect of Friction) 1-32

1.14.1 Coefficient of Insensitiveness of Porter Governor 1-32

1.15 Wilson Hartnell Governor 1-37

Chapter 2 : Gyroscope 2-1 to 2-60

Gyroscope : Introduction, Gyroscopic couple and its effect on spinning bodies, naval ships during steering, pitching, rolling and their stabilization.

2.1 Introduction to Gyroscopic Effect 2-2

2.2 Gyroscope 2-2

2.3 Precessional Angular Motion 2-3

2.4 Concept of Gyroscopic Couple 2-4

2.4.1 Active and Reactive Gyroscopic Couples 2-6

2.4.2 Directions of Active and Reactive Gyroscope Couples 2-6

2.5 Gyroscopic Effect on Aeroplanes 2-9

2.6 Gyroscopic Effect on Ships 2-16

2.6.1 Terminology used in Ship 2-17

2.6.2 Gyroscopic Effect on Ships During Steering 2-17

2.6.3 Gyroscopic Effect on Ships during Pitching 2-20

2.6.4 Gyroscopic Effect on Ships during Rolling 2-24

2.7 Gyroscopic Stabilization 2-25

2.8 Stabilization of Ships 2-25

2.9 Stability of Four-Wheel Vehicle Moving in Curved Path 2-35

2.9.1 Reactions of Ground on Four Wheels of Vehicle 2-35

2.9.2 Condition for Stability of Four Wheel Vehicle 2-37

2.10 Stability of Four Wheel Vehicle Moving in Curved Path With Banking 2-45

2.10.1 Reactions of Ground on Wheels of Vehicle 2-46

2.10.2 Condition for Stability of Four Wheel Vehicle With Banking 2-47

2.11 Stability of Two Wheel Vehicle Moving in Curved Path 2-49

2.11.1 Forces and Couple Acting on Two Wheel Vehicle Moving in Curved Path 2-50
2.11.2 Condition for Stability of Two Wheel Vehicle Moving in Curved Path 2-51
2.12 Gyroscopic Effect on Inclined Rotating Disc ... 2-54

MODULE 2

Chapter 3 : Static and Dynamic Force Analysis 3-1 to 3-37

Static and Dynamic force analysis of Slider crank mechanism (neglecting mass of connecting rod and crank), Turning moment on crank shaft
Dynamically equivalent systems to convert rigid body into two mass with and without correction couple (Case study- Connecting rod)

3.1 Introduction 3-2
3.2 Definitions 3-2
3.3 D'Alembert's Principle 3-3
3.4 Simple Harmonic Motion (S.H.M) 3-3
3.5 Radius of Gyration of Rigid Bodies 3-4
3.5.1 Compound Pendulum : (Theory and Analysis) 3-4
3.5.2 Bifilar Suspension 3-6
3.5.3 Trifilar Suspension (Torsional Pendulum) 3-9
3.6 Two Mass Statically and Dynamically Equivalent Systems 3-11
3.7 Correction Couple 3-15
3.8 Force Analysis in IC Engine Mechanism 3-18
3.8.1 Static Force Analysis of IC Engine Mechanism 3-18
3.8.2 Dynamic Force Analysis or Inertia Force Analysis of IC Engine Mechanism 3-26
3.9 Determination of Position of Mass m_2 of Dynamically Equivalent System of Two Masses by Graphical Method 3-33
3.10 Introduction to T - θ Diagram 3-33
3.10.1 Turning Moment Diagrams 3-34
3.10.2 Turning Moment Diagram for a Single Cylinder Double Acting Reciprocating Steam Engine 3-34
3.10.3 Turning Moment Diagram for a Single Cylinder Four Stroke IC Engine 3-35
3.10.4 Turning Moment Diagram for Multicylinder Engines (For Two Cylinder Double Acting Steam Engine) 3-36
3.10.5 Turning Moment Diagram for Multicylinder in Line Four Stroke IC Engine 3-36
3.10.6 Applications of Turning Moment Diagrams 3-36

MODULE 3

Chapter 4 : Basic Concepts of Vibration 4-1 to 4-11

Basic Concepts of Vibration : Vibration and oscillation, causes and effects of vibrations, Importance of study of vibrations, Vibration parameters - springs, mass, damper, Motion- periodic, non-periodic, degree of freedom, static equilibrium position, vibration classification, steps involved in vibration analysis

4.1 Introduction to Vibrations 4-2
4.1.1 Phenomenon of Vibration 4-2
4.1.2 Causes of Vibrations 4-2
4.1.3 Disadvantages of Vibrations 4-2
4.1.4 Advantages of Vibrations 4-2
4.1.5 Methods of Reducing Effects of Undesirable Vibrations 4-2
4.2 Terminology and Basic Concepts 4-3
4.3 Elements of Vibratory System 4-4
4.4 Modeling of System 4-5
4.5 Equivalent Springs 4-6
4.5.1 Springs in Series 4-6
4.5.2 Springs in Parallel 4-6
4.6 Equivalent Dampers 4-7
4.6.1 Dampers in Series 4-7
4.6.2 Dampers in Parallel 4-7
4.7 Types of Vibrations 4-7
4.8 List of Formulae 4-10

Chapter 5 : Free Undamped Single Degree of Freedom Vibration System 5-1 to 5-45

Free Undamped Single Degree of Freedom Vibration System : Longitudinal, transverse, torsional vibration system, Methods for formulation of differential equations by Newton, Energy, Lagrangian and Rayleigh's method

5.1 Introduction 5-2

5.2 Determination of Natural Frequency 5-2

5.2.1 Equilibrium Method (D'Alembert's Principle) 5-2

5.2.2 Energy Method 5-4

5.2.3 Rayleigh's Method 5-5

5.3 Undamped Free Transverse Vibrations 5-6

5.3.1 Torsional Stiffness (K_t) 5-8

5.4 Undamped Free Torsional Vibrations 5-8

5.5 List of Formulae 5-44

MODULE 4

Chapter 6 : Free Damped Single Degree of Freedom Vibration System 6-1 to 6-43

Free Damped Single Degree of Freedom Vibration System : Introduction to different methods of damping, Study and analysis of 1) Viscous damped system (under damped, critically damped, over damped; Logarithmic decrement) 2) Coulomb's damping (Combined Viscous and Coulomb damping excluded)

Equivalent Single Degree of Freedom Vibration System : Conversion of multi-springs, multi masses, multi-dampers into a single spring and damper with linear or rotational co-ordinate system(Refer Chapter 4).

6.1 Introduction to Damping 6-2

6.2 Types of Dampings 6-2

6.2.1 Material or Solid or Structural or Hysteresis Damping 6-4

6.2.2 Comparison between Viscous and Coulomb Dampings 6-5

6.3 Damped Free Vibrations with Viscous Damping 6-6

6.3.1 General Solution to Differential Equation and Types of Damped Systems 6-8

6.4 Logarithmic Decrement (δ) 6-11

6.5 Damped Free Torsional Vibrations 6-12

6.6 Free Vibrations with Coulomb or Dry Friction Damping 6-35

6.6.1 Rate of Decay of Vibrations 6-38

6.6.2 Damped Free Torsional Vibrations with Coulomb or Dry Friction Damping 6-39

6.7 List of Formulae 6-42

MODULE 5

Chapter 7 : Forced Single Degree of Freedom Vibration System 7-1 to 7-27

Forced Single Degree of Freedom Vibratory System : Analysis of linear and torsional systems subjected to harmonic force excitation and harmonic motion excitation (excluding elastic damper)

7.1 Introduction to Forced Vibrations 7-2

7.2 Forced Damped Vibrations with Constant Harmonic Excitation 7-2

7.2.1 Complementary Function(x_c) 7-3

7.2.2 Particular Integral(x_p) 7-3

7.2.3 Complete Solution for Differential Equation 6

7.2.4 Magnification Factor or Dynamic Magnifier (MF) 7-6

7.2.5 Frequency Response Curves 7-7

7.2.6 Plot of Phase Angle (ϕ) Versus Frequency Ratio (ω / ω_n) 7-7

7.3 Forced Vibrations Due to Rotating Unbalance 7-14

7.3.1 Plot of Dimensionless Steady-State Amplitude Versus Frequency Ratio 7-15

7.4 Forced Vibrations Due to Reciprocating Unbalance 7-16

7.5 Forced Vibrations Due to Excitation of Support Instead of Mass 7-20

7.5.1 Absolute Amplitude 7-20

7.5.2 Relative Amplitude 7-21

Chapter 8 : Vibration Isolation And Transmissibility **8-1 to 8-14**

Vibration Isolation and Transmissibility : Force Transmissibility, motion transmissibility, typical isolators & mounts.

8.1 Introduction **8-2**
8.1.1 Vibration Isolators 8-2
8.2 Vibration Transmissibility **8-2**
8.2.1 Force Transmissibility(T_R) 8-3
8.2.2 Transmissibility Versus Frequency Ratio 8-5
8.2.3 Motion Transmissibility 8-6

Chapter 9 : Vibration Measuring Instruments **9-1 to 9-30**

Vibration Measuring instruments : Principle of seismic instruments, vibrometer, accelerometer - undamped and damped, Introduction to conditioning monitoring and fault diagnosis

9.1 Introduction **9-2**
9.2 Vibration Measurement Process **9-2**
9.3 Classification of Vibration Measuring Instruments **9-2**
9.4 Vibrometers (Amplitude Measuring Instruments) **9-3**
9.4.1 Stylus Recording Instrument 9-4
9.4.2 Seismic Instrument or Seismometer or Vibration Pick-up 9-4
9.4.3 Optical Recording Instrument 9-6
9.4.4 Simple Potentiometer 9-6
9.4.5 Capacitance Pick-Up 9-6
9.4.6 Mutual Inductance Pick-Up 9-7
9.5 Velocity Pick-Ups (Velometers) **9-7**
9.5.1 Active Type Pick-up 9-8
9.5.2 Passive Type Pick-Up(Electromagnetic Pick-Up) 9-8
9.6 Acceleration Pick-Ups (Accelerometers) **9-9**
9.6.1 Difference between vibrometer and accelerometer 9-10
9.7 Frequency Measuring Instruments **9-10**
9.7.1 Single-Reed Frequency Meter or Fullarton Tachometer 9-10
9.7.2 Multi-Reed Frequency Meter or Frahm's Tachometer 9-11
9.7.3 Stroboscope 9-11
9.8 Measurement of Damping **9-11**
9.9 Vibration Exciters **9-12**
9.9.1 Mechanical Exciters 9-13
9.9.2 Electrodynamic Exciters 9-13
9.9.3 Hydraulic and Pneumatic Exciters 9-14
9.10 Introduction to FFT Spectrum Analyzer **9-20**
9.10.1 Applications of FFT Spectrum Analyzer 9-22
9.11 Introduction to Vibration Monitoring (Condition Monitoring and Diagnosis) of Machines 9-22
9.11.1 Condition Monitoring Techniques 9-22
9.11.2 Vibration Monitoring Techniques 9-23
9.11.3 Instrumentation Systems for Condition Monitoring 9-24
9.11.4 Analysis of Results 9-26
9.12 Case Studies **9-26**
9.13 List of Formulae **9-30**

MODULE 6

Chapter 10 : Rotor Dynamics **10-1 to 10-15**

Rotor Dynamics : Critical speed of single rotor, undamped and damped

10.1 Introduction 10-2
10.2 Critical Speed of Shaft Carrying Single Rotor (Without Damping) 10-2
10.2.1 Ranges of Shaft Speed 10-3
10.3 Critical Speed of Shaft Carrying Single Rotor (With Damping) 10-7
10.3.1 Various Possible Phase Angles 10-9
10.4 Secondary Critical Speed 10-9
10.5 Critical Speed of Shaft Carrying Multiple Rotors 10-12

10.5.1 Rayleigh's Method....10-12
10.5.2 Dunkerley's Method....10-12
10.6 List of Formulae....10-14

Chapter 11 : Balancing 11-1 to 11-62

Balancing : Static and Dynamic balancing of multi rotor system(up to four rotors), balancing of reciprocating masses in In-line engines(up to four cylinders) , Introduction to V-engines (excluding other radial engines)

11.1 Introduction to Balancing.... 11-2
11.1.1 Types of Forces Acting on Components of Machine 11-2
11.1.2 Balancing and Need of Balancing 11-2
11.2 Unbalanced System 11-2
11.3 Static and Dynamic Balancing.... 11-3
11.3.1 Difference between Static Balancing and Dynamic Balancing.... 11-3
11.4 Study of Balancing 11-4
11.5 Balancing of Rotating Masses.... 11-4
11.6 Balancing of Masses Rotating in Single Plane.... 11-5
11.6.1 Balancing of Single Rotating Mass 11-5
11.6.2 Balancing of Several Masses Rotating in Same Plane.... 11-7
11.7 Balancing of Several Masses Rotating in Different Planes....11-10
11.7.1 Balancing by Graphical Method 11-10
11.7.2 Balancing by Analytical Method....11-11
11.8 Balancing of Reciprocating Masses 11-29
11.9 Balancing of Reciprocating Masses in Single Cylinder Engines.... 11-29
11.9.1 Primary and Secondary Unbalanced Forces Due to Reciprocating Masses....11-29
11.9.2 Difference between Unbalanced Force Due to Reciprocating Mass and Rotating Mass....11-31
11.9.3 Partial Balancing of Primary Unbalanced Force in Reciprocating Engine....11-31
11.10 Balancing of Reciprocating Masses in Multicylinder Inline Engines.... 11-33
11.10.1 Conditions for Complete Balancing of Multi-cylinder Inline Engines....11-34
11.10.2 Primary Balancing of Inline Multi-cylinder Engines 11-34
11.10.3 Secondary Balancing of Inline Multi-cylinder Engines 11-34
11.10.4 Balancing of Four Cylinder Inline Engines 11-35
11.11 Concept of Direct and Reverse Cranks 11-50
11.11.1 Primary Force 11-50
11.11.2 Secondary Force 11-51
11.12 Balancing of V-Engines 11-55
11.12.1 Variation of Resultant Primary and Secondary Forces with Crank Angle....11-57
11.13 Balancing Machines 11-60
11.13.1 Static Balancing Machines 11-60
11.13.2 Dynamic Balancing Machines 11-61
