1.24.4	Accessing Function and Utility Function	1-43																																																																																																																																						
1.25	Constructors	1-43																																																																																																																																						
1.26	Types of Constructor	1-44																																																																																																																																						
1.26.1	Parameterized Constructor	1-44																																																																																																																																						
1.26.2	Multiple Constructors within Class	1-44																																																																																																																																						
1.26.3	Constructor with Default Parameters	1-45																																																																																																																																						
1.26.4	Copy Constructor	1-45																																																																																																																																						
1.26.5	Default Copy Constructor	1-46																																																																																																																																						
1.27	Destructors	1-46																																																																																																																																						
1.28	Objects and Memory Requirements	1-47																																																																																																																																						
1.29	Static Members (Variable and Functions)	1-48																																																																																																																																						
1.30	Static Data Members	1-49																																																																																																																																						
1.31	Inline Functions	1-50																																																																																																																																						
1.31.1	Call by Value and Call by Reference	1-51																																																																																																																																						
1.32	Friend Functions	1-52																																																																																																																																						
1.32.1	Advantages and Disadvantages of Friend Functions	1-54																																																																																																																																						
2.8.2	Private Inheritance	2-10																																																																																																																																						
2.8.3	Member Access Control	2-11																																																																																																																																						
2.9	Types of Inheritance	2-11																																																																																																																																						
2.9.1	Single Inheritance	2-12																																																																																																																																						
2.9.2	Multiple Inheritance	2-13																																																																																																																																						
2.9.3	Hierarchical Inheritance	2-15																																																																																																																																						
2.9.4	Hybrid Inheritance	2-15																																																																																																																																						
2.10	Ambiguity in Multiple Inheritance	2-16																																																																																																																																						
2.11	Virtual Base Class	2-17																																																																																																																																						
2.12	Abstract Class	2-18																																																																																																																																						
2.13	Friend Classes	2-19																																																																																																																																						
2.14	Static Class	2-20																																																																																																																																						
2.15	Nested Class	2-20																																																																																																																																						
Chapter 3 : Pointers		3-1 to 3-14																																																																																																																																						
3.1	Pointer : Indirection Operators	3-1																																																																																																																																						
3.2	Memory Management : New and Delete	3-2																																																																																																																																						
3.3	Pointers to Objects	3-3																																																																																																																																						
3.4	this Pointer	3-4																																																																																																																																						
3.5	Pointers vs Arrays	3-5																																																																																																																																						
3.6	Accessing Arrays using Pointers	3-6																																																																																																																																						
3.6.1	Pointer and String	3-7																																																																																																																																						
3.7	Arrays of Pointers	3-7																																																																																																																																						
3.8	Function Pointers	3-9																																																																																																																																						
3.9	Pointers to Pointer	3-10																																																																																																																																						
3.10	Pointers to Derived Classes	3-10																																																																																																																																						
3.11	Passing Pointers to Functions	3-11																																																																																																																																						
3.12	Return Pointers from Functions	3-11																																																																																																																																						
3.13	Null Pointer	3-12																																																																																																																																						
3.14	Void Pointer	3-13																																																																																																																																						

Unit - II

**Unit - III****Chapter 4 : Polymorphism 4-1 to 4-19**

4.1	Introduction to Polymorphism	4-1
4.2	Types of Polymorphism	4-2
4.2.1	Function Overloading	4-2
4.2.2	Operator Overloading	4-3
4.2.3	Function Overriding	4-4
4.2.4	Difference between Compile Time and Run Time Polymorphism	4-4
4.3	Concept of Overloading	4-5
4.4	Overloading Unary Operators	4-5
4.5	Overloading Binary Operators	4-6
4.6	Data Conversion	4-7
4.6.1	Conversion between Basic and User Defined Data Types	4-7
4.6.2	Conversion between User Defined Data Types	4-8
4.7	Type Casting (Implicit and Explicit)	4-10
4.7.1	Implicit Type Casting	4-10
4.7.2	Explicit Type Casting	4-11
4.8	Pitfalls of Operator Overloading and Conversion	4-11
4.9	Keywords : Explicit and Mutable	4-11
4.10	Pointer to Base Class	4-14
4.11	Virtual Function and its Significance in C++	4-15
4.12	Pure Virtual Function and Virtual Table	4-16
4.12.1	Pure Virtual Functions	4-16
4.12.2	Virtual Table	4-16
4.13	Virtual Destructor	4-18
4.14	Abstract Base Class	4-18

Unit - IV**Chapter 5 : Files and Streams 5-1 to 5-20**

5.1	Data Hierarchy	5-1
5.2	Streams and Files	5-1
5.3	Stream Classes	5-2
5.4	Stream Errors	5-4
5.5	Files	5-6
5.5.1	File Handling in C++	5-6
5.5.2	C++ Classes for File Handling	5-7
5.6	Disk File I/O with Streams	5-7
5.6.1	File Opening Mode	5-10
5.6.2	Reading and Writing Class Object from File	5-10
5.6.3	Reading and Writing Multiple Class Objects	5-11
5.7	File Pointers	5-12
5.8	Error Handling in File I/O	5-14
5.9	File I/O with Member Functions	5-15
5.10	Overloading the Extraction and Insertion Operators ..	5-16
5.11	Memory as a Stream Object	5-17
5.12	Command-Line Arguments	5-18
5.13	Printer Output	5-19

Unit - V**Chapter 6 : Exception Handling 6-1 to 6-13**

6.1	Fundamentals of Exception Handling	6-1
6.2	Other Error Handling Techniques	6-2
6.3	Simple Exception Handling - Divide by Zero	6-3
6.4	Multiple Catching	6-5
6.5	Re-throwing an Exception	6-5
6.6	Exception Specifications	6-7
6.7	User Defined Exception	6-9
6.8	Processing Unexpected Exceptions	6-10

6.9	Constructor, Destructor and Exception Handling	6-11
6.10	Exception and Inheritance	6-12

Chapter 7 : Templates **7-1 to 7-10**

7.1	Introduction to Generic Programming	7-1
7.2	Power of Templates	7-3
7.2.1	Need of Templates in C++	7-4
7.3	Function Template / Applying Generic Function	7-4
7.4	Overloading Function Templates	7-6
7.5	Overloading Class Template	7-7
7.6	Class Template and Nontype Parameters	7-8
7.7	Template and Friends Generic Functions	7-8
7.8	The Type Name and Export Keywords	7-9

Unit - VI

Chapter 8 : Standard Template Library (STL) 8-1 to 8-20

8.1	Introduction to Standard Template Library (STL)	8-1
8.1.1	Components of STL	8-1
8.2	Containers	8-2
8.2.1	Sequence Container and Associative Containers	8-2
8.2.2	Container Adapters	8-3

8.3	Functions in Container Classes	8-4
8.3.1	Array	8-4
8.3.2	Deque	8-4
8.3.3	Queue	8-8
8.4	STL Vector	8-8
8.5	STL Stack	8-9
8.6	STL Lists	8-10
8.7	Algorithms	8-11
8.8	Basic Searching and Sorting Algorithms	8-12
8.9	Min Max Algorithms	8-13
8.10	Set Operations	8-13
8.11	Heap Sort	8-14
8.12	Iterators - Input, Output, Forward, Bidirectional and Random Access	8-15
8.12.1	Types of Iterators	8-16
8.13	Object Oriented Programming - Road Map to Future	8-17
	• Model Question Paper (End Sem.)	Q-1 to Q-2
