

**UNIT I****Chapter 1 : Design of Machine Tool Gear Boxes****1-1 to 1-61**

Syllabus : Introduction to machine tool gearboxes, design and its applications, basic considerations in design of drives, determination of variable speed range, graphical representation of speed and structure diagram, ray diagram, selection of optimum ray diagram, gearing diagram, deviation diagram. (Note: Full design problem to be restricted up to 2-stages only)

1.1	Introduction To Gear Boxes.....	1-2
1.1.1	Purpose of Using Gear Box	1-2
1.1.2	Types of Gear Boxes	1-2
1.2	Need of Multi-Speed Gear Box in Machine Tools	1-4
1.3	Basic Considerations in Design of Multi-Speed Gear Box	1-4
1.4	Laws of Stepped Regulation of Speeds in Multi-Speed Gear Box.....	1-5
1.4.1	Comparison of Laws of Stepped Regulation of Speeds in Multi-Speed Gear Box	1-7
1.4.2	Advantages (Significance) of Geometric Progression	1-8
1.5	Parameters Required (Used) in Kinematic Design of Multi-Speed Gear Box	1-9
1.6	Kinematic Diagram (Gearing Diagram) of Gear Box	1-12
1.7	Structural Formulae.....	1-12
1.8	Structure Diagrams	1-14
1.8.1	Procedure for Constructing Structure Diagram	1-15
1.8.2	Examples of Structure Diagram	1-15
1.8.3	Salient Features and Limitations of Structure Diagrams	1-15
1.8.4	Types of Structure Diagrams	1-16

1.8.5	Selection of Optimum Structure Diagram	1-16
1.9	Speed Diagrams and Ray Diagrams	1-17
1.9.1	Procedure for Constructing Speed Diagrams	1-18
1.9.2	Salient Features of Speed Diagrams	1-18
1.9.3	Selection of Optimum Speed Diagram	1-18
1.9.4	Comparison between Structure Diagram and Speed Diagrams	1-18
1.10	General Guidelines in Developing Kinematic Diagram (Gearing Diagram) for Multi-Speed Gear Box.....	1-19
1.11	Procedure for Kinematic Design of Multi-Speed Gear Box For Machine Tools	1-21
1.12	Deviation Diagram for Multi-Speed Gear Box	1-22
1.13	List of Formulae	1-61

UNIT II**Chapter 2 : Statistical Considerations in Design****2-1 to 2-37**

Syllabus : Frequency distribution , histogram and frequency polygon, normal distribution, units of central tendency and dispersion, standard deviation, population combinations, design for natural tolerances, design for assembly, statistical analysis of tolerances, mechanical reliability and factor of safety.

2.1	Causes for Variations	2-2
2.2	Terminology in Statistical Analysis	2-2
2.3	Frequency Distribution.....	2-3
2.4	Parameters Defining Frequency Distribution	2-4
2.4.1	Central Value or Central Tendency	2-4
2.4.2	Standard Deviation	2-4
2.5	Normal or Gaussian Distribution Curve	2-5
2.6	Standard Normal Distribution Curve	2-6
2.6.1	Comparison Between Normal Distribution and Standard Normal Distribution Curves	2-8
2.7	Population Combinations.....	2-10

2.7.1	Population Combination	2-10
2.7.2	Mean and Standard Deviation of Resultant Population	2-10
2.7.3	Summary of Population Combinations	2-11
2.8	Design and Natural Tolerances	2-13
2.9	Factor of Safety and Reliability	2-30
2.9.1	Factor of Safety and Reliability	2-30
2.9.2	Factor of Safety based Design	2-30
2.9.3	Reliability based Design	2-30
2.10	List of Formulae	2-36

UNIT III

Chapter 3 : Design of Belt Conveyor System for Material Handling 3-1 to 3-45

Syllabus : System concept, basic principles, objectives of material handling system, unit load and containerization, belt conveyors, flat belt and troughed belt conveyors, capacity of conveyor, rubber covered and fabric ply belts, belt tensions, conveyor pulleys, belt idlers, tension take-up systems, power requirement of horizontal belt conveyors for frictional resistance of idler and pulleys.

3.1	System Concept For Material Handling	3-2
3.2	Types of Loads Handled by Material Handling Systems	3-2
3.3	Containerization	3-2
3.4	Introduction to Material Handling Equipment	3-3
3.4.1	Principles (Guidelines) In Selecting Material Handling Equipment	3-3
3.5	Objectives of Material Handling System	3-4
3.6	Classification of Material Handling Equipment.....	3-5
3.7	Hoisting Equipment	3-6
3.8	Surface and Overhead Equipment.....	3-6
3.9	Conveyors (Conveying Equipment)	3-6
3.10	Advantages, Limitations and Applications of Conveyors	3-7
3.10.1	Advantages of Conveyors	3-7
3.10.2	Limitations of Conveyors	3-7
3.10.3	Applications of Conveyors	3-7
3.11	Types of Materials Handled by Conveyors.....	3-7
3.12	Types of Conveyors.....	3-8
3.12.1	Flat Belt Conveyors	3-8
3.12.2	Troughed Belt Conveyors.....	3-10
3.12.3	Blanket Belt Conveyors	3-10
3.12.4	Woven Wire Belt Conveyors	3-11
3.12.5	Chain Conveyors	3-11
3.12.6	Apron Conveyors	3-11
3.12.7	Screw Conveyors	3-12
3.12.8	Comparison Between Belt, Chain and Screw Conveyors	3-12
3.13	Elements of Belt Conveyor System	3-13
3.14	Conveyor Belt.....	3-13
3.14.1	Components of Conveyor Belt	3-13
3.14.2	Types of Conveyor Belts	3-13
3.14.3	Capacity of Belt Conveyors (Q)	3-14
3.15	Head (Drive) and Tail Pulleys	3-17
3.16	Snub Pulleys	3-18
3.17	Idlers	3-18
3.17.1	Purpose of Using Idlers	3-18
3.17.2	Types of Idlers	3-18
3.17.3	Idler Size and Spacing	3-19
3.18	Belt Take-Up Devices.....	3-20
3.18.1	Purpose of Belt Take-Up Device	3-20
3.18.2	Types of Belt Take-Up Devices	3-20
3.19	Methods of Feeding (Loading) To Flat Belt Conveyor.....	3-21
3.20	Methods of Discharge (Unloading) from Flat Belt Conveyor.....	3-22
3.21	Drive Unit For Belt Conveyors	3-24
3.22	Estimation of Power Requirement of Belt Conveyors	3-24
3.23	Approximate Estimation of Power Requirement of Belt Conveyors	3-24
3.24	Exact Estimation of Power Requirement of Belt Conveyors	3-25
3.24.1	Different Resisting Forces on Conveyor Belt	3-25
3.24.2	Belt Tensions At Various Points Along Conveyor Path (Steps in Belt conveyor Analysis)	3-28

3.24.3	Power Requirement of Belt Conveyors	3-31
3.25	Selection of Number of Plies For Conveyor Belts	3-31
3.26	Conveyor Belt Sag.....	3-32
3.27	List of Formulae	3-44

UNIT IV

Chapter 4 : Design of Cylinders 4-1 to 4-35

Syllabus : Thin and thick cylinders, Lamé's equation, Clavarino's and Birnie's equations, design of hydraulic and pneumatic cylinders, auto-fretting and compound cylinders (no derivation), gasketed joints in cylindrical vessels (no derivation)

4.1	Types Of Cylinders	4-2
4.2	Thin Cylinders	4-2
4.2.1	Stresses in Thin Cylinders	4-2
4.2.2	Stresses in Thin Spherical Vessels	4-3
4.3	Thick Cylinders.....	4-6
4.3.1	Difference between Thin Cylinders and Thick Cylinders	4-6
4.4	Thick Cylinders Subjected to Internal and External Pressures	4-6
4.5	Thick Cylinders Subjected to Internal Pressure	4-8
4.5.1	Principal Stresses at Inner Surface and Outer Surface of Thick Cylinder	4-9
4.5.2	Principal Stresses Used in Design of Thick Cylinder Subjected to Internal Pressure	4-9
4.6	Design of Thick Cylinders Subjected to Internal Pressure	4-10
4.6.1	Design Based on Maximum Principal Stress Theory (Lamé's Equation)	4-10
4.6.2	Design Based on Maximum Principal Strain Theory (Clavarino's Equation and Birnie's Equation)	4-10
4.6.3	Design Based on Maximum Shear Stress Theory	4-12

4.6.4	Design Based on Distortion Energy Theory	4-12
4.7	Thick Cylinders Subjected to External Pressure	4-17
4.7.1	Principal Stresses Used in Design of Thick Cylinder Subjected to External Pressure	4-18
4.8	Increasing Pressure Capacity (Pre-Stressing) of Thick Cylinders.....	4-20
4.9	Methods of Pre-Stressing of Thick Cylinders	4-21
4.9.1	Autofretting.....	4-21
4.9.2	Wire Wound Cylinders	4-21
4.9.3	Tape Wound Cylinders	4-22
4.9.4	Compound Cylinders	4-22
4.10	Gasketed Joints in Cylinders	4-29
4.11	List of Formulae	4-34

Chapter 5 : Design of Pressure Vessels 5-1 to 5-32

Syllabus : Modes of failures in pressure vessels, unfired pressure vessels, classification of pressure vessels as per IS. 2825 - categories and types of welded joints, weld joint efficiency, stresses induced in pressure vessels, materials for pressure vessel, thickness of cylindrical shells and design of end closures as per code, nozzles and openings in pressure vessels, reinforcement of openings in shell and end closures - area compensation method, types of vessel supports (theoretical treatment only).

5.1	Introduction to Pressure Vessels	5-2
5.2	Unfired Pressure Vessels	5-2
5.3	Types of Welded Joints Used in Pressure Vessels	5-2
5.4	Categories of Welded Joints in Unfired Pressure Vessels	5-3
5.5	Classification of Unfired Pressure Vessels	5-4
5.6	Selection of Material for Unfired Pressure Vessels	5-5
5.6.1	Materials Used for Unfired Pressure Vessels	5-5

5.7	Selection of Design Parameters For Unfired Pressure Vessels	5-5
5.8	Design of Unfired Pressure Vessels	5-6
5.9	Design of Pressure Vessel Shell	5-6
5.9.1	Pressure Vessel Shell Subjected to Internal Pressure	5-7
5.9.2	Pressure Vessel Shell Under Combined Loading	5-7
5.10	Design of End Closures In Unfired Pressure Vessels	5-11
5.10.1	Flat Heads	5-11
5.10.2	Formed Heads	5-11
5.10.3	Attachment of Head to Shell	5-14
5.11	Design of Nozzles and Openings in Unfired Pressure Vessels	5-20
5.11.1	Area for Area Method of Compensation	5-20
5.11.2	Methods of Reinforcement	5-22
5.11.3	Types of Attachments of Nozzles with Pressure Vessel Shell	5-22
5.12	Supports for Pressure Vessels	5-30
5.12.1	Supports for Vertical Pressure Vessels	5-30
5.12.2	Supports for Horizontal Pressure Vessels	5-31
5.13	List of Formulae	5-31

UNIT V**Chapter 6 : Design of I.C. Engine Components****6-1 to 6-64**

Syllabus : Introduction to selection of material for I. C. engine components, design of cylinder and cylinder head, construction of cylinder liners, design of piston and piston-pins, piston rings, design of connecting rod, design of crank-shaft and crank-pin. (Theoretical treatment only).

6.1	Introduction	6-2
6.2	Cylinder and Cylinder Head	6-2
6.2.1	Construction of Cylinder Liners	6-2
6.2.2	Stresses in Cylinder Liner	6-3

6.2.3	Design of Cylinder and Cylinder Head	6-4
6.3	Piston	6-16
6.3.1	Construction of Piston	6-16
6.3.2	Design of Piston Head (Crown)	6-18
6.3.3	Design of Piston Barrel	6-20
6.3.4	Design of Piston Rings	6-20
6.3.5	Design of Piston Skirt	6-22
6.3.6	Design of Reinforcing Ribs	6-22
6.3.7	Design of Piston Pin (Gudgeon Pin)	6-22
6.3.8	Piston Clearance	6-24
6.4	Connecting Rod	6-35
6.4.1	Construction of Connecting Rod	6-36
6.4.2	Materials for Connecting Rods	6-37
6.4.3	Loads Acting on Connecting Rod	6-37
6.4.4	Summary of Loads on Connecting Rod	6-40
6.4.5	Design of Connecting Rod Body	6-40
6.4.6	Design of Other Parts of Connecting Rod	6-41
6.5	Crankshaft	6-57
6.5.1	Construction of Crank Shaft	6-57
6.5.2	Types of Crankshafts	6-57
6.5.3	Materials for Crankshafts	6-58
6.5.4	Design of Crank Pin	6-58
6.5.5	Design of Crank Web (Crank)	6-59
6.5.6	Design of Crankshaft	6-60
6.6	Summary of Design of I.C. Engine Components	6-61
6.7	List of Formulae	6-61

UNIT VI**Chapter 7 : Optimum Design****7-1 to 7-37**

Syllabus : Objectives of optimum design, adequate and optimum design, Johnson's method of optimum design, primary design equations, subsidiary design equations and limit equations, optimum design with normal specifications of simple machine elements : tension bar, transmission shaft, helical spring and pressure vessel, introduction to redundant specifications (theoretical treatment).

7.1	Classification of Design Parameters.....7-2	7.7.1	Optimum Design Procedure for Normal Specifications7-7
7.1.1	Functional Requirement Parameters (Including Undesirable Effects)7-2	7.8	Johnson's Method of Optimum Design for Redundant Specifications7-32
7.1.2	Material Parameters7-2	7.8.1	Optimum Design Procedure for Redundant Specifications7-33
7.1.3	Geometrical Parameters7-3	7.8.2	Difference Between Optimum Design for Normal Specifications and Redundant Specifications7-35
7.1.4	Summary of Design Parameters7-3	7.9	Johnson's Method of Optimum Design for Incompatible Specifications7-37
7.2	Classification of Design Parameters based on Status in Design Problem7-4	➤	Appendix – A :.....A – 1 to A-12
7.3	Adequate Design.....7-4	➤	Appendix – B : B – 1 to B-22
7.4	Objective of Optimum Design.....7-4	➤	Question Papers :.....Q-1 to Q-25
7.5	Optimum Design7-5		
7.5.1	Difference Between Adequate Design and Optimum Design7-5		
7.6	Johnson's Method of Optimum Design7-6		
7.6.1	Classification of Design Equations7-6		
7.6.2	Categories of Optimum Design Problems7-7		
7.7	Johnson's Method of Optimum Design for Normal Specifications7-7
