

Unit 01

**Chapter 1 : Power Semiconductor Devices - Thyristors
1-1 to 1-45**

Syllabus : Construction, Static and dynamic characteristics, Specifications / rating of SCR, Triggering circuits (R, R-C, UJT), Commutation circuits (class C and D), Gate Turn Off (GTO), Thyristor (Construction, Working and Application), TRIAC- four mode operation, Triggering of TRIAC using DIAC, **Application**-light dimmer.

1.1	Introduction to Power Electronics	1-2	1.9.5	Applications of SCR	1-17
1.1.1	Principle of Power Electronics	1-2	1.10	Triggering Devices for SCRs	1-17
1.1.2	Requirements of Power Devices	1-2	1.10.1	Unijunction Transistor (UJT)	1-17
1.2	Thyristors	1-2	1.11	Bidirectional Triode SCRs (Triacs)	1-18
1.3	Silicon Controlled Rectifier (SCR)	1-3	1.11.1	Construction of a Triac	1-18
1.3.1	Basic Structure of SCR	1-3	1.11.2	Characteristics of Triac (Static Characteristics)	1-19
1.3.2	Gate Cathode Layouts	1-3	1.11.3	Different States of Triac Operation	1-20
1.4	Static V-I Characteristic of SCR	1-4	1.11.4	Modes of Operation	1-20
1.5	Operation of SCR	1-6	1.11.5	Advantages of Triac	1-23
1.5.1	Operation without Gate Current	1-6	1.11.6	Disadvantages of Triac	1-23
1.5.2	Operation with Gate Current	1-6	1.11.7	Applications of Triac	1-23
1.5.3	Reverse Blocking Capacity	1-6	1.12	DIAC	1-23
1.5.4	Forward Blocking Capacity of SCR	1-7	1.12.1	Construction of Diac	1-23
1.6	Two Transistor Equivalent Circuit	1-7	1.12.2	I-V Characteristics of a Diac	1-23
1.6.1	SCR as a Switch	1-9	1.12.3	DIAC Applications	1-24
1.6.2	SCR Turn ON Methods	1-9	1.12.4	Disadvantages of DIAC	1-24
1.6.3	Merits of Gate Turn on	1-10	1.13	Gate Turn Off (GTO) Thyristor	1-24
1.7	Dynamic Characteristics of SCR	1-10	1.13.1	Construction of GTO	1-24
1.7.1	Turn-On Characteristics of SCR	1-11	1.13.2	Operating Principle	1-25
1.7.2	Turn-off Process	1-12	1.13.3	GTO Turn off Mechanism	1-25
1.7.3	Turn-off Characteristics (Dynamic turn off Characteristics) of SCR	1-12	1.13.4	Magnitude of $I_G^{(-)}$ for Reliable Turn Off	1-26
1.7.4	Turn-off Time (t_q)	1-13	1.13.5	I-V Characteristics of GTO	1-26
1.8	Various Losses in Power Devices	1-13	1.13.6	Other Important Characteristics of GTO	1-26
1.8.1	Static Losses	1-14	1.13.7	Advantages of GTO over SCR	1-26
1.8.2	Switching Losses (Dynamic Losses)	1-14	1.13.8	Advantages of GTO over BJT	1-26
1.9	SCR Ratings	1-14	1.13.9	Difference between Gating Characteristics of GTO and SCR	1-27
1.9.1	Current Ratings	1-14	1.13.10	Applications of GTO	1-27
1.9.2	Voltage Ratings	1-15	1.14	Comparison of GTO and SCR	1-27
1.9.3	Advantages of SCR	1-16	1.14.1	Comparison of SCR and Triac	1-27
1.9.4	Drawbacks of SCR	1-17	1.15	SCR Gate Characteristics	1-28
			1.15.1	Types of Gate Triggering	1-29
			1.15.2	Pulsed Triggering of SCR	1-29
			1.15.3	Requirements of Gate Drive for SCR	1-30
			1.15.4	Delay Angle and Conduction Angle	1-30
			1.16	Isolation Circuits	1-31
			1.16.1	Pulse Transformers	1-31
			1.16.2	Opto Couplers / Isolators	1-31

1.16.3	LED-phototransistor Opto-Coupler	1-31
1.17	SCR Triggering Circuits	1-32
1.17.1	Simple Resistor Trigger Circuit (R-Trigger Circuit)	1-32
1.17.2	Half Wave RC Triggering Circuit	1-34
1.17.3	Full Wave RC Triggering Circuit	1-35
1.17.4	Synchronized UJT Relaxation Oscillator for Triggering SCR	1-36
1.17.5	Comparison of Triggering Circuits	1-38
1.18	TRIAC Control using DIAC	1-38
1.18.1	Light Dimmer using Triac	1-39
1.19	Commutation	1-40
1.20	Commutation Techniques	1-40
1.20.1	Natural Commutation	1-40
1.20.2	Forced Commutation	1-41
1.20.3	Conditions for Successful Commutation	1-41
1.21	Classification of Forced Commutation Methods	1-41
1.21.1	Complementary Voltage Commutation (Class C Commutation)	1-41
1.21.2	Auxiliary Voltage Commutation (Class D Commutation)	1-43
	Review Questions	1-45

Unit 01**Chapter 2 : Protection Circuits of SCR 2-1 to 2-14**

Syllabus : Protection (Over voltage, Over current and thermal).

2.1	Introduction	2-2
2.2	Over Current Protection	2-2
2.2.1	Semiconductor Fuses	2-2
2.2.2	Auto Current Limiting	2-3
2.3	Over Current / Over Voltage Protection	2-4
2.3.1	Protection for Supply Voltage Transients	2-4
2.3.2	Protection for Load Voltage Transients	2-5
2.4	dv/dt and di/dt Protection	2-6
2.4.1	di/dt Protection (Turn on Snubber)	2-6
2.4.2	dv/dt Protection (Turn off Snubber)	2-7
2.4.3	Design of a Snubber Circuit	2-8
2.5	Thermal Protection	2-9

2.5.1	Heat Transfer Considerations	2-9
2.5.2	Thermal Resistance of a Power Device	2-10
2.5.3	Thermal Model of a Power Device	2-10
2.5.4	Factors Affecting the Value of θ_{CS}	2-11
2.5.5	Thermal Resistance of the Heat Sink θ_{SA}	2-11
2.5.6	Heat Sink	2-12
2.5.7	Solved Examples	2-12
2.6	Different Cooling	2-13

- Review Questions** 2-14

Unit 02**Chapter 3 : Transistor Based Devices 3-1 to 3-18**

Syllabus : Transistor based Devices : MOSFET and IGBT - Construction, Working, Static and dynamic characteristics.

3.1	Power Transistors	3-2
3.1.1	Classification of Power Transistors	3-2
3.1.2	Power BJT	3-2
3.2	Construction of Power BJT	3-2
3.3	I-V Characteristics of the Power Transistor	3-3
3.3.1	Operation of Power Transistor	3-5
3.4	Power MOSFET	3-5
3.4.1	Structure of a Power MOSFET	3-6
3.4.2	Simplified Structure of Power MOSFET	3-6
3.4.3	Principle of Operation	3-7
3.4.4	I-V (Static) Characteristic of MOSFET	3-8
3.4.5	Equivalent Circuit of Power MOSFET	3-9
3.4.6	Switching Characteristic of MOSFETs	3-9
3.5	Gate Driving Requirements of a Power MOSFET	3-11
3.5.1	Gate Drive for MOSFETs	3-11
3.5.2	Merits of a Power MOSFET	3-12
3.5.3	Demerits of a Power MOSFET	3-12
3.5.4	Applications of Power MOSFETs	3-12
3.6	Insulated Gate Bipolar Transistor (IGBT)	3-12
3.6.1	Features of IGBT	3-13
3.7	Construction of IGBT	3-13
3.8	Static (I-V) Characteristic of IGBT	3-14
3.9	Principle of Operation of IGBT	3-14

3.10	IGBT Driving Circuits	3-15	4.6.2	Class A Chopper with RLE Load and Continuous Load Current	4-9
3.10.1	IGBT Drive Circuit Requirements	3-15	4.6.3	Class A Chopper with RLE Load and Discontinuous Load Current	4-10
3.10.2	Merits of IGBT	3-16	4.6.4	Step Down Chopper with RL Load and Discontinuous Load Current	4-11
3.10.3	Demerits of IGBT	3-16	4.7	Chopper Classification on the Basis of Operating Quadrants	4-16
3.10.4	Applications of IGBT	3-16	4.7.1	Quadrant of Operation of Class A Chopper	4-16
3.10.5	Advantages of IGBT over BJT	3-16	4.7.2	Class B Chopper (Regenerative Chopper)	4-16
3.10.6	Advantages of IGBT over MOSFET	3-17	4.7.3	Type C Chopper	4-18
3.11	Comparison of SCR, BJT, MOSFET and IGBT	3-17	4.7.4	Type D Chopper	4-19
3.12	University Questions and Answers	3-18	4.7.5	Fourth Quadrant Operation of Type D Chopper	4-20
	• Review Questions.....	3-18	4.8	Class E Chopper	4-21
			4.8.1	Operation in the First Quadrant	4-21
			4.8.2	Type E Chopper in Fourth Quadrant	4-22
			4.8.3	Type E Chopper in the Third Quadrant	4-23
			4.8.4	Type E Chopper in Second Quadrant	4-23
			4.9	Step Up Chopper	4-24
			4.9.1	Expression for the Output Voltage (RL Load)	4-25
			4.9.2	Step up Chopper with RLE Load	4-27
			4.10	Necessity of Input Filter	4-28
			4.11	Applications of a Chopper	4-29
			4.12	Switch Mode Converters	4-29
			4.12.1	Classification of SMPS	4-30
			4.12.2	Types of Non-isolated SMPS	4-30
			4.13	Buck Switching Chopper	4-30
			4.14	Switching Boost Chopper	4-31
			4.15	Switching Buck-Boost Chopper	4-31
			4.15.1	Operation	4-31
			4.15.2	Features of Buck-Boost Regulator	4-33
			4.16	Applications - Chargers for Battery Operated Vehicles.....	4-33
			4.17	University Questions and Answers	4-34
				• Review Questions	4-34

Unit 02

Chapter 4 : DC - DC Converter 4-1 to 4-34

Syllabus : Principle of operation of chopper, Classification on the basis of operating quadrants (A, B, C, D, E), **Control Techniques :** CLC, TRC, PWM and FM techniques. Analysis of step-up chopper and numerical with RLE load. Buck boost chopper (Descriptive treatment), **Applications :** Chargers for battery operated vehicles.

4.1	A DC Chopper	4-2
4.2	Classification of Choppers Based on Quadrant of Operation	4-2
4.2.1	Class A Chopper	4-3
4.2.2	Class B Chopper	4-3
4.2.3	Class C Chopper	4-3
4.2.4	Class D Chopper	4-3
4.2.5	Class E Chopper	4-3
4.3	Control Strategies	4-4
4.3.1	Time Ratio Control (TRC) or PWM	4-4
4.3.2	Frequency Modulation	4-5
4.3.3	Current Limit Control (CLC)	4-5
4.3.4	Variable Pulse Width and Frequency	4-6
4.4	Comparison between Different Control Strategies of a Chopper	4-6
4.5	Class A Chopper with R load	4-6
4.5.1	Analysis of Step Down Chopper (Output Side)	4-7
4.6	Class A Chopper with RLE Load	4-9
4.6.1	Modes of Operation	4-9

Unit 03

Chapter 5 : Single Phase AC - DC Converter 5-1 to 5-58

Syllabus : Single phase Converter : Fully controlled converter, **Half controlled converter (Semi-converter)** : Operation of all converters with R and RL load, Derivation of Average and RMS output voltage, Power factor, THD, TUF. Numerical based on output voltage and current calculations, Single phase dual converter (Descriptive treatment only), **Application** : Speed control of DC motor.

5.1	Controlled Rectifiers (AC to DC Converters)	5-2	5.5.2	Operation with Resistive Load	5-25
5.1.1	Principle of AC-DC Converter	5-2	5.5.3	Operation with RL Load	5-27
5.2	Classification of AC to DC Converters.....	5-3	5.5.4	Analysis of Midpoint Configuration	5-29
5.2.1	Two Pulse Converters	5-3	5.5.5	Why is it called as M_2 Configuration ?	5-29
5.3	Half Wave Controlled Rectifier	5-3	5.6	Full Converter (Bridge Converter)	5-30
5.3.2	Analysis of HWCR with Resistive Load	5-4	5.6.1	Operation of Full Converter with RL Load	5-31
5.3.3	Operation of HWCR with (RL) Load	5-6	5.6.2	Analysis of Full Converter with the RL Load (Output Side)	5-33
5.3.4	Effect of Freewheeling Diode in AC-DC Converter	5-7	5.6.3	Two Quadrant Operation of Full Converters	5-34
5.3.5	Effect of Freewheeling Diode in HWCR.....	5-7	5.6.4	Conditions for Inversion Mode	5-35
5.3.6	Drawbacks of HWCR	5-8	5.6.5	Performance Parameters for Full Converter	5-35
5.4	Half Controlled Converter (Semiconverter)	5-9	5.6.6	Fourier Analysis of Supply Current Waveform of Full Converter	5-36
5.4.1	Operation with Highly Inductive Load	5-9	5.6.7	Performance Parameters	5-38
5.4.2	Asymmetrical Configuration Operation with RL Load	5-12	5.6.8	Operation of Full Converter with Resistive Load	5-41
5.4.3	Semiconverter with a Freewheeling Diode (RL Load)	5-13	5.6.9	Analysis of Full Converter with Resistive Load	5-43
5.4.4	Output Voltage Analysis of Semi converter	5-15	5.6.10	Comparison of Semiconverter and Full Converter	5-46
5.4.5	Analysis on the Input Side of Semiconverter	5-17	5.6.11	Advantages of Full Converter	5-47
5.4.6	Performance Parameters for a Semiconverter	5-19	5.6.12	Disadvantages of Full Converter	5-48
5.4.7	Operation with the Resistive Load (Symmetrical Configuration)	5-21	5.6.13	Application	5-48
5.4.8	Analysis of Semiconverter with Resistive Load	5-22	5.6.14	Applications of Controlled Rectifiers	5-48
5.4.9	Comparison between Configurations of Semiconverter	5-24	5.6.15	Comparison of Controlled H.W.R. and Controlled F.W.R.	5-48
5.4.10	Advantages of Semiconverters	5-24	5.7	Single Phase Dual Converters	5-48
5.4.11	Disadvantages of Semiconverters	5-24	5.7.1	Ideal Dual Converter	5-49
5.4.12	Application	5-24	5.7.2	Practical Dual Converters	5-49
5.5	Fully Controlled Converter	5-24	5.7.3	Dual Converter with Circulating Current	5-50
5.5.1	Midpoint (M_2) Configuration.....	5-25	5.7.4	Comparison of Circulating and Non-circulating Current Modes	5-51
			5.7.5	Single Phase Dual Converter	5-51
			5.8	Application- Speed Control of DC Motors	5-52
			5.8.1	Armature Voltage Control	5-52
			5.8.2	Field Current Control	5-52
			5.8.2	Converter based DC Drives	5-52
			5.9	Single Phase DC Drives	5-53
			5.9.1	Semiconverter Based DC Drive	5-53
			5.9.2	Full Converter Based DC Drive	5-54

5.9.3	Dual Converter Based DC Drives	5-55
-------	--------------------------------------	------

• **Review Questions..... 5-57**

Unit 04

Chapter 6 : Three Phase Converter 6-1 to 6-29

Syllabus : Three phase converters : Fully controlled converter, **Half controlled converter (Semi converter) :** Operation of all converters with R, RL load, Derivation of Average and RMS output voltage. Numerical based on output voltage and current calculations.

6.1	Introduction	6-2
6.1.1	3-Phase Transformers	6-2
6.2	Three Phase AC Supply	6-2
6.3	Drawing Phase and Line Voltages	6-2
6.3.1	How to Draw the Phase Voltages ?	6-2
6.3.2	How to Draw the Line Voltages ?	6-3
6.4	Classification of Three Phase Controlled Rectifiers	6-3
6.5	Three Phase Half Wave Controlled Rectifier (HWCR)	6-3
6.5.1	3 - ϕ HWCR with RL Load	6-4
6.5.2	HWCR with Purely Resistive Load	6-6
6.5.2.1	Continuous Conduction Mode ($\alpha \leq 30^\circ$ or $\pi / 6$)	6-6
6.5.2.2	Discontinuous Conduction Mode ($\alpha > 30^\circ$ or $\pi / 6$)	6-6
6.6	Three Phase Full Converter	6-7
6.6.1	Operation with Highly Inductive Load	6-8
6.6.1.1	Rectification Mode ($\alpha < 90^\circ$)	6-8
6.6.1.2	Inverter Mode of Operation ($\alpha > 90^\circ$)	6-11
6.6.2	Operation with a Purely Resistive Load [Full Converter]	6-13
6.6.2.1	Operation in Continuous Conduction Mode $\alpha \leq 60^\circ$	6-13
6.6.2.2	Operation in Discontinuous Conduction Mode ($\alpha > 60^\circ$)	6-14
6.6.3	6 Pulse Converter	6-15
6.7	3 Phase Semiconverters (Half Controlled Converter)	6-16
6.7.1	Operation with Inductive (RL) Load	6-17
6.7.1.1	6 Pulse Mode ($\alpha \leq 60^\circ$)	6-17
6.7.1.2	Operation with $\alpha > \pi / 3$ or 60° (3 Pulse Mode)	6-20

6.7.2	3 Phase Semiconverter with Purely Resistive Load	6-21
-------	--	------

6.7.3	Comparison of 1 ϕ and 3 ϕ converters ...	6-27
-------	--	------

6.8	Comparison between Three Phase Semiconverters and Full Converters	6-28
-----	---	------

6.9	University Questions and Answers	6-29
-----	--	------

• **Review Questions 6-29**

Unit 04

Chapter 7 : AC Voltage Regulators 7-1 to 7-19

Syllabus : AC voltage regulator : Single phase AC voltage regulator ; Operation with R and RL Load, Derivation of average and RMS output voltage. Concept of two stage AC voltage regulator (Descriptive treatment only).

7.1	AC Voltage Regulator	7-2
7.1.1	Types of AC Controllers	7-2
7.1.2	Applications of AC Voltage Controllers ...	7-2
7.1.3	Merits of AC Voltage Controllers	7-2
7.1.4	Demerits of AC Voltage Controllers	7-2
7.2	Principle of Phase Angle Control	7-2
7.2.1	Classification of Controllers with Phase Angle Control	7-2
7.3	1- Phase Half Wave Controller	7-3
7.3.1	Operation	7-3
7.3.2	Analysis	7-4
7.3.3	Advantages and Disadvantages of Half Wave ac Controller	7-5
7.4	Full Wave AC Voltage Controller	7-5
7.4.1	Operation with Resistive Load	7-5
7.4.2	Analysis of Full Wave Controller (R Load)	7-6
7.4.3	Advantages and Disadvantages of Full Wave Controller	7-6
7.4.4	Applications	7-7
7.4.5	Bidirectional AC Voltage Controller with RL Load	7-9
7.4.6	Effect of Load Inductance Why Short Gate Pulses are not Suitable for Inductive Loads ?	7-11
7.4.7	Analysis of Full Controller with RL Load	7-11

7.4.8	Other Parameters of Full Controller with RL Load7-11	8.5	Single Phase Full Bridge Inverter (Square Wave Output)8-10
7.5	Concept of Two Stage AC Voltage Regulator7-15	8.5.1	Operation with Resistive Load8-11
7.5.1	Operation with Resistive (R) Load7-16	8.5.2	Bridge Inverter with RL Load8-12
7.5.2	Operation with RL Load7-17	8.5.3	Analysis of Bridge Inverter8-14
7.5.3	Advantages7-18	8.5.4	Drawbacks of Square Wave Output Voltage.....8-17
7.5.4	Applications7-18	8.5.5	Comparison of Half Bridge and Full Bridge Inverters8-17
7.6	Comparison of Half Wave and Full Wave AC Voltage Controllers7-18	8.6	Quasi - Square Waveform8-18
•	Review Questions..... 7-19	8.7	Quasi-Square Wave Bridge VSI8-18
		8.7.1	Operation with the Resistive Load8-18
		8.7.2	Operation with RL Load8-19
		8.8	Voltage Control Techniques8-21
		8.8.1	Need of Voltage Control8-21
		8.8.2	Need of Harmonic Control8-22
		8.8.3	Classification of Voltage Control Techniques8-22
		8.8.4	Control of DC Input Voltage8-22
		8.8.5	Control of Voltage Delivered by Inverter8-23
		8.9	Control of Voltage within Inverter using PWM Technique8-24
		8.9.1	Various PWM Techniques8-24
		8.9.2	Single Pulse Width Modulation (SM)8-24
		8.9.3	Symmetrical Multiple Pulse Width Modulation8-26
		8.9.4	Comparison of SM and SMM8-28
		8.9.5	Multiple Pulse Modulation with Selective Elimination of Harmonics (MMSR)8-29
		8.9.6	Sinusoidal Pulse Width Modulation (SPWM)8-30
		8.9.7	Comparison of Various Methods of Output Voltage Control8-32
		8.10	Current Source Inverters8-33
		8.11	Principle of Operation of CSI8-33
		8.12	Single Phase CSI Using Thyristors (ASCI)8-34
		8.12.1	Advantages of CSI8-36
		8.12.2	Drawbacks of CSI8-36
		8.12.3	Comparison of VSI and CSI8-36
		8.13	Applications of Inverter8-37
		8.14	UPS8-37
		8.14.1	Important Parameters8-37

Unit 05

Chapter 8 : Single Phase DC - AC Converter 8-1 to 8-40

Syllabus : Full bridge VSI, Derivation of output voltage and current, Numerical, Current source inverter with ideal switches and Load commutated CSI, Voltage control techniques, **Application :** UPS.

8.1	Introduction8-2
8.2	Classification of Inverters8-2
8.2.1	VSI and CSI8-2
8.2.2	Classification Based on the Configuration of the Inverter8-2
8.2.3	Classification Based on Output Waveform8-2
8.2.4	Classification Based on Type of Commutation Circuit8-3
8.2.5	Classification Based on the Power Semiconductor Devices8-3
8.3	Transistor based Inverters8-3
8.3.1	Half Bridge Square Wave VSI8-3
8.3.2	Fourier Analysis of the Load Voltage of a Half Bridge Inverter8-5
8.3.3	Instantaneous Output Current8-6
8.3.4	Fundamental Output Power8-7
8.4	Performance Parameters of Inverters8-7
8.4.1	Harmonic Factor of nth Harmonics HF_n8-7
8.4.2	Total Harmonic Distortion (THD)8-7
8.4.3	Distortion Factor DF8-7
8.4.4	Lowest Order Harmonic (LOH)8-8
8.4.5	Cross Conduction8-8

8.14.2	Types of UPS	8-37
8.14.3	On Line UPS	8-38
8.14.4	Off Line UPS System	8-39

• **Review Questions..... 8-40**

Unit 06

Chapter 9 : Three Phase DC-AC Converter 9-1 to 9-39

Syllabus : Three phase VSI using 120° and 180° mode and their comparison, PWM based VSI, Voltage control and harmonic elimination techniques (Single pulse modulation, Multilevel control), Multilevel converter concept, Its classification (Neutral point clamped converter, Flying capacitor converter, Cascaded multilevel converter) and their Comparison, **Application :** Speed control of 3-phase induction motor.

9.1	Introduction	9-2
9.1.1	Three Phase Bridge Inverter	9-2
9.2	180° Mode of Conduction	9-3
9.2.1	Operation in 180° Mode with a Star Connected Resistive Load	9-4
9.2.2	Cross Conduction or Shoot Through Fault in 180° Mode	9-7
9.2.3	120° Mode of Conduction with Star Connected Resistive Load	9-8
9.2.4	Device Utilization Factor (DUF)	9-11
9.2.5	Comparison of 120° and 180° Modes	9-11
9.3	PWM Based VSI	9-11
9.3.1	1-Phase PWM Half Bridge Inverter	9-11
9.3.2	Analysis of PWM Half Bridge Inverter	9-12
9.3.3	1-Phase Bipolar PWM Bridge Inverter	9-14
9.3.4	1-Phase Unipolar PWM Bridge Inverter	9-15
9.3.5	Three Phase PWM Inverter	9-15
9.3.6	Advantages of SPWM	9-17
9.3.7	Disadvantages of SPWM	9-17
9.4	Three Phase Current Source Inverter	9-17
9.5	Harmonic Elimination Techniques	9-18
9.5.1	Harmonic Reduction using Single Pulse Width Modulation	9-18
9.5.2	Harmonic Reduction using Transformer Connections	9-19
9.5.3	Harmonic Reduction using the PWM Techniques	9-19
9.5.4	Harmonic Elimination Technique	9-20

9.5.5	Harmonic Injected Modulation	9-20
9.5.6	Third Harmonic PWM	9-20
9.5.7	Space Vector Modulation (SVM)	9-21
9.5.8	Comparison of PWM Techniques	9-21
9.6	Multilevel Inverters	9-22
9.6.1	Need of Multilevel Inverters	9-22
9.6.2	Multilevel Concept	9-23
9.6.3	Output Phase Voltage	9-23
9.6.4	Realization of multilevel Inverters	9-24
9.6.5	Features/Advantages of MLI	9-24
9.6.6	Limitations of MLI	9-24
9.7	Types of Multilevel Inverter	9-24
9.8	Diode Clamped Multilevel Inverter	9-25
9.8.1	Features of Diode-Clamped Inverter	9-26
9.8.2	Advantages of Diode-Clamped Inverter	9-26
9.8.3	Disadvantages of Diode-Clamped Inverter	9-27
9.9	Flying Capacitors Multi-level Inverter (FCMLI)	9-27
9.9.1	Features of Flying Capacitors Multi-level Inverter	9-28
9.9.2	Advantages of FCMLI	9-29
9.9.3	Disadvantages of FCMLI	9-29
9.10	Cascaded Multi-level Inverter	9-29
9.10.1	Generation of Quasi-square Waveform	9-30
9.10.2	Features of Cascaded Inverter	9-31
9.10.3	Advantages of Cascaded Inverter	9-31
9.10.4	Disadvantages of Cascaded Inverter	9-31
9.10.5	Comparison of Multi-level Converters	9-31
9.10.6	Comparison of Multi-pulse and Multi-level Inverters	9-32
9.11	Applications of Multilevel Inverter	9-32
9.12	Application- Speed Control of 3-Phase Induction Motor	9-32
9.12.1	Stator Voltage Control	9-33
9.12.2	Stator Voltage and Frequency Control (V / f Control)	9-34
9.12.3	Square Wave Inverter Based Drive	9-35
9.12.4	Constant V/f Control using PWM Inverter	9-37
