

11.7	State Diagram Representation	11-4	11.11	Equivalent State Equations	11-21
11.7.1	Non-uniqueness of the State Variable	11-5	11.12	Solution of LTI State Equations	11-22
11.8	State Space Representation by Specific Types of State Variables	11-5	11.12.1	Solution of Homogeneous State Equation	11-22
11.8.1	Different Representation of State Model	11-5	11.12.2	Properties of State Transition Matrix.....	11-22
11.8.2	Forming State Models by Physical Variables.....	11-5	11.12.3	Solution of Non-homogeneous State Equation	11-24
11.8.3	Forming State Model by Phase Variables.....	11-9	11.12.4	Another Way of Solution of LTI State Equations.....	11-24
11.8.4	State Space Representation using Phase Variable in Observable Controllable Form (Dec. 17)	11-10	11.12.4(A)	Solution in Time Domain	11-24
11.8.5	Explanation of State Variable Model by Phase Variables using Differential Equation	11-11	11.12.5	Properties of State Transition Method	11-24
11.9	To Obtain Transfer Function from State Variable Model and Vice Versa (Dec. 15, May 16)	11-12	11.12.6	Solution using Laplace Transform	11-25
11.9.1	To Obtain State Variable Form from Transfer Function	11-15	11.12.7	Controllability and Observability.....	11-25
11.9.2	Canonical Form of State Variable Model	11-18	11.12.8	Transformations	11-33
11.10	Diagonalisation.....	11-19	11.12.9	Transformation to Observable Canonical form CCF.....	11-33
11.10.1	Eigen Values and Eigen Vectors	11-19	11.12.10	Another way of Computation by Canonical Transformation	11-34
11.10.2	To Obtain Model Matrix	11-19	11.13	University Questions	11-39
				• Chapter Ends	11-40
				• University Question Paper Dec.2018	Q-1 to Q-4
