

**Chapter 1 : Introduction to Operation Research****1-1 to 1-7**

Syllabus : Origin of Operation Research, Historical Standpoint, Methodology, Different Phases, Characteristics, Scope and Application of Operations Research.

1.1	Introduction to Operation Research-A Quantitative Approach to Decision Making.....	1-1
1.2	Operation Research Terminology.....	1-2
1.3	History of Operation Research	1-2
1.4	Basic Operation Research Concepts	1-2
1.4.1	Definition of Operation Research	1-2
1.4.2	Philosophy	1-2
1.5	Characteristics of Operation Research.....	1-3
1.5.1	Scientific Approach.....	1-3
1.5.2	Interdisciplinary Team Approach	1-3
1.5.3	Planned Approach	1-3
1.6	Phases of an Operation Research Project (Methodology for Conducting OR Project).....	1-3
1.6.1	Pre-modelling Phase	1-3
1.6.2	Modelling Phase	1-4
1.6.3	Post-Modelling Phase.....	1-4
1.7	Scope of Operation Research	1-5
1.7.1	Defence	1-5
1.7.2	Industrial Organizations.....	1-5
1.7.3	National Budgeting and Agriculture Projects	1-6
1.7.4	Education and Training.....	1-6
1.7.5	Transportation	1-6
1.8	Limitations of Operation Research	1-6

Chapter 2 : Linear Programming**2-1 to 2-25**

Syllabus : Introduction, Requirement of LP, Basic Assumptions, Formulation of LP, General Statement of LP, Solution techniques of LP : Graphical Methods.

2.1	Introduction to Linear Programming	2-1
2.2	Linear Programming - Mathematical Formulation(General Statement of LP).....	2-2
2.3	Introduction to Graphical Method	2-8
2.4	Special Cases of Linear Programming Problems.....	2-17
2.5	Limitations of Linear Programming.....	2-18

2.6	Solved Examples.....	2-19
-----	----------------------	------

Chapter 3 : Simplex Method**3-1 to 3-32**

Syllabus : Analytical Methods: Simplex, Big M and Two Phase, Special Case of LP Problem,

3.1	Introduction to Simplex Method.....	3-1
3.1.1	Basic Terminology.....	3-1
3.2	The Simplex Algorithm for Maximization Case.....	3-2
3.3	The Simplex Algorithm for Minimization Case.....	3-7
3.3.1	Two Phase Method.....	3-8
3.3.2	The Big M Method	3-11
3.4	Some Special Cases.....	3-14
3.4.1	Unrestricted (Unconstrained) Variables	3-14
3.4.2	Unbounded Solution.....	3-15
3.4.3	No Feasible Solution	3-15
3.4.4	Multiple Optimal Solutions.....	3-16
3.4.5	Degeneracy	3-17
3.4.6	Additional Problems	3-17
3.5	Solved Examples.....	3-21

Chapter 4 : Duality and Sensitivity Analysis 4-1 to 4-11

Syllabus : Graphical Sensitivity Analysis. Introduction of Primal and Dual Problems, Economic Interpretation.

4.1	Introduction to Duality and Sensitivity Analysis	4-1
4.2	Relationship between Primal and Dual Problem... ..	4-1
4.2.1	Mixed Constraints.....	4-3
4.2.2	Unrestricted Constraints.....	4-4
4.3	Dual Simplex Method	4-4
4.4	Sensitivity (Post-optimality) Analysis.....	4-6

Chapter 5 : Goal Programming**5-1 to 5-11**

Syllabus : Introduction of Goal Programming.

5.1	Introduction to Goal Programming	5-1
5.2	Difference between Linear Programming and Goal Programming Approach.....	5-1
5.3	Goal Programming Model Formulation	5-2
5.4	Ranking and Weighting of Unequal Multiple Goals.....	5-5
5.5	Graphical Solution Method of Goal Programming	5-6

5.6	Modified Simplex Method	5-8
-----	-------------------------------	-----

Chapter 6 : Integer Programming 6-1 to 6-7

Syllabus : Introduction of Integer Programming.

6.1	Introduction to Integer Programming	6-1
6.2	Types of Integer Programming Problems	6-1
6.3	Methods of Solving Integer Programming Problem.....	6-1
6.4	Gomory's All Integer Cutting Plane Method.....	6-2
6.5	Branch and Bound Method	6-2

Chapter 7 : Dynamic Programming 7-1 to 7-10

Syllabus : Steps involved in dynamic programming, characteristics and explanation of dynamic programming, formulation of Deterministic and probabilistic dynamic programming.

7.1	Introduction to Dynamic Programming	7-1
7.2	Characteristics of Dynamic Programming	7-1
7.3	Applications of Dynamic Programming.....	7-2
7.4	Solved Problems	7-2

Chapter 8 : Transportation Models 8-1 to 8-45

Syllabus : Transportation Problems definition, Linear form, Solution methods : North west corner method, least cost method, Vogel's approximation method. Degeneracy in transportation, Modified Distribution method, Unbalanced problems and profit maximization problems. Transshipment Problems.

8.1	Introduction to Transportation.....	8-1
8.2	Mathematical Model for Transportation Problem...	8-1
8.3	Types of Transportation Problem	8-2
8.3.1	Balanced Transportation Problem	8-2
8.3.2	Unbalanced Transportation Problem.....	8-2
8.4	Methods to Solve Transportation Problem	8-4
8.4.1	To Find the Initial Basic Feasible Solution.....	8-4
8.4.2	U-V Method for Optimizing the Initial Basic Feasible Solution	8-5
8.5	Transshipment Model	8-29
8.5.1	Transshipment Problem with Sources and Destinations Acting as Transient Nodes.....	8-29

8.5.2	Transportation Problem with Some Transient Nodes between Sources and Destinations	8-32
8.6	Solved Examples.....	8-35

Chapter 9 : Assignment Models 9-1 to 9-28

Syllabus : Assignment Problems and Travelling salesman Problem Algorithm.

9.1	Introduction and Zero-one Integer Programming Model for Assignment Problem.....	9-1
9.2	Introduction to Assignment Model	9-2
9.3	Types of Assignment Problem	9-2
9.4	Hungarian Method.....	9-3
9.5	Special Cases in Assignment Models	9-7
9.6	Maximization Problem	9-7
9.7	Unbalanced Assignment Problem.....	9-11
9.8	Assignment Problems with Restriction (Prohibited Assignments)	9-12
9.9	Alternative (Multiple) Optimal Solution	9-13
9.10	Travelling Salesman Problem	9-15
9.11	Solved Examples.....	9-17

Chapter 10 : Queuing Models 10-1 to 10-30

Syllabus : Basis of Queuing theory, Elements of queuing theory, Kendall's Notation, Operating characteristics of a queuing system, Classification of Queuing models, Preliminary examples of M/M/1 : ∞/∞ /FCFS.

10.1	Introduction to Queuing Theory.....	10-1
10.2	Queuing Systems and Structures (Components of Queuing Systems)	10-2
10.3	Modelling Arrival and Service Processes	10-3
10.4	Kendall Lee Notations for Queuing System	10-4
10.5	Birth Death Process	10-5
10.6	Relationship and Derivation of Length of the Queue and Length of the System.....	10-6
10.7	Various Queuing Models or Systems	10-7
10.8	Classification of Queuing Models and their Solutions	10-12
10.9	Solved Examples.....	10-23

Chapter 11 : Replacement Analysis 11-1 to 11-24

Syllabus : Introduction, Replacement of capital equipment which depreciated with time, Replacement by alternative equipment, Group and individual replacement policy.

11.1 Introduction..... 11-1

11.2 Replacement of Items that Deteriorates with Time..... 11-1

11.3 Replacement of Item with Constant Resale Value 11-2

11.4 Replacement of Item with Falling Resale Value 11-2

11.5 Replacement of Items with Present Worth Factor 11-4

11.6 Replacement of Items that Fail Completely..... 11-5

11.7 Staffing Problem 11-10

11.8 Solved Examples..... 11-14

Chapter 12 : Game Theory 12-1 to 12-30

Syllabus : Introduction, Characteristics of Game Theory, Two Person, Zero sum games, Pure strategy. Dominance theory, Mixed strategies (2 x 2, M x 2), Algebraic and graphical methods.

12.1 Introduction to Game Theory..... 12-1

12.1.1 Brief History of the Technique 12-1

12.1.2 Basic Terminology 12-2

12.1.3 Classification of Games..... 12-2

12.2 Two-Person-Zero-Sum-Games 12-3

12.2.1 Pure Strategy (Solutions of Games with Saddle Points)..... 12-3

12.2.2 Mixed Strategy (Rectangular Games without Saddle Point)..... 12-3

12.3 Theory of Dominance..... 12-8

12.4 2 x n Games..... 12-9

12.4.1 Graphical Method..... 12-10

12.4.2 Bidding Problems..... 12-11

12.5 Advantages and Limitations of Game Theory ... 12-20

12.6 Solved Examples..... 12-20

Chapter 13 : Decision Analysis 13-1 to 13-23

Syllabus : Introduction, Decision under certainty, Decision under risk, Decision under uncertainty : Laplace criterion, MaxiMin criterion, MiniMax criterion, savage MiniMax regret criterion, Hurwicz criterion, Decision tree.

13.1 Introduction 13-1

13.2 Decision Making Under Risk 13-2

13.3 Decision Making Under Uncertainty 13-4

13.4 Revision of Probabilities and Expected Value from Sample Information Introduction..... 13-6

13.5 Solved Examples..... 13-20

Chapter 14 : Network Models 14-1 to 14-52

Syllabus : Introduction to PERT and CPM, Critical Path calculation, Float calculation and its importance. Cost reduction by Crashing of activity.

14.1 Introduction to CPM and PERT 14-1

14.2 Rules of Network Construction..... 14-2

14.3 Critical Path Method 14-4

14.4 PERT for Project Scheduling with Uncertain Activity Times..... 14-10

14.5 Crashing that is Project Time-Cost Trade Off ... 14-14

14.6 Resource Levelling and Resource Smoothing .. 14-22

14.7 Solved Examples..... 14-38

• **University Question Paper (Winter 2020)**
..... **A-1 to A-3**
