

<b>Chapter 1 : Introduction to Control Systems</b>	<b>1-10</b>	2.11.2	Force - Current Analogy.....	2-17	
1.1	Introduction.....	1-1	2.11.3	Advantages of Analogous Systems.....	2-18
1.2	Important Definitions .....	1-1	2.12	Representation by Nodal Method .....	2-18
1.3	Open Loop System .....	1-2	2.13	Solved Examples on Mathematical Modeling .....	2-18
1.3.1	Open Loop Examples .....	1-2	2.14	Armature Controlled D.C. Motor .....	2-25
1.3.2	Advantages and Disadvantages of Open Loop Systems .....	1-3	<b>Chapter 3 : Block Diagram Representation 3-1 to 3-32</b>		
1.4	Closed Loop System.....	1-3	3.1	Introduction .....	3-1
1.4.1	Closed Loop Examples .....	1-3	3.1.1	How to Draw a Block Diagram ?.....	3-1
1.4.2	Advantages and Disadvantages of Closed Loop System.....	1-5	3.2	Block Diagram Definitions.....	3-1
1.5	How Does One Convert an Open Loop System to a Closed Loop System ? .....	1-5	3.3	Generating a Block Diagram from a Physical System.....	3-1
1.5.1	Comparison of Open and Closed Loop Systems .....	1-6	3.4	Block Diagram Reduction .....	3-2
1.6	Servo Mechanisms.....	1-6	3.4.1	Derivation of Closed Loop (Feedback) Transfer Function .....	3-3
1.6.1	Requirements of a Good Control System .....	1-6	3.4.2	Advantages of Block Diagram Reduction.....	3-3
1.7	Feed Forward Systems .....	1-7	3.4.3	Disadvantages of Block Diagram Reduction .....	3-4
1.8	Adaptive Control Systems.....	1-7	3.5	Rules for Block Diagram Reduction .....	3-4
1.9	Solved Examples.....	1-8	3.6	Solved Examples.....	3-9
1.10	The Design Process .....	1-10	<b>Chapter 4 : Signal Flow Graph 4-1 to 4-27</b>		
1.10.1	Linear System.....	1-10	4.1	Introduction .....	4-1
<b>Chapter 2 : Transfer Function and Mathematical Modelling 2-1 to 2-26</b>			4.1.1	How to Draw a Signal Flow Graph ? .....	4-1
2.1	Introduction .....	2-1	4.2	Method to Draw SFG from System Equations .....	4-1
2.2	Transfer Function .....	2-1	4.3	Method to Draw SFG from Block Diagrams .....	4-2
2.3	Poles and Zeros of a Transfer Function .....	2-3	4.4	Some Important Signal Flow Graph Terms.....	4-3
2.4	Properties of Transfer Function (T. F.) .....	2-5	4.5	Properties of SFG .....	4-5
2.5	Proper and Improper Transfer Functions .....	2-5	4.5.1	Comparison of Block Diagram and SFG Methods.....	4-5
2.6	Advantages and Disadvantages of Transfer Function ...	2-6	4.6	Mason's Gain Formula.....	4-5
2.7	Impulse Response .....	2-6	4.6.1	Mason's Gain Equation .....	4-6
2.7.1	Impulse Response of a System .....	2-7	4.7	Steps for Solving S.F.G. using Mason's Gain Formula....	4-6
2.8	Transfer Functions of Basic Devices.....	2-8	4.7.1	Solved Examples.....	4-6
2.9	Solved Examples on Transfer Functions .....	2-11	4.8	Solving SFG When Equations are Given.....	4-24
2.10	Mathematical Modeling of Mechanical and Electrical Systems.....	2-13	4.8.1	Solved Examples on SFG .....	4-24
2.10.1	Translational Motion.....	2-14	4.9	Use of Mason's Gain Formula for Electrical Network....	4-26
2.10.2	Rotational Motion.....	2-15	<b>Chapter 5 : Time Response Analysis 5-1 to 5-46</b>		
2.10.3	Electrical Systems.....	2-16	5.1	Introduction .....	5-1
2.11	Analogous Systems .....	2-16	5.1.1	Time Response.....	5-1
2.11.1	Force - Voltage Analogy.....	2-17	5.2	Inputs Supplied to a System .....	5-2
			5.3	Steady State Response .....	5-4
			5.3.1	Effect of Input R (s) on Steady State Error .....	5-5

5.3.2	Effect of Open Loop Transfer Function $G(s)H(s)$ on Steady State Error $e_{ss}$ .....	5-7
5.4	Subjecting a Type 0 System to a Step, Ramp and Parabolic Input.....	5-7
5.4.1	Step Input to a Type 0 System.....	5-7
5.4.2	Ramp Input to a Type 0 System.....	5-8
5.4.3	Parabolic Input to a Type 0 System.....	5-9
5.5	Subjecting a Type 1 System to a Step, Ramp and Parabolic Input.....	5-10
5.5.1	Step Input to a Type 1 System.....	5-10
5.5.2	Ramp Input to a Type 1 System.....	5-10
5.5.3	Parabolic Input to a Type 1 System.....	5-11
5.6	Subjecting a Type 2 System to a Step, Ramp and Parabolic Input.....	5-12
5.6.1	Step Input to a Type 2 System.....	5-12
5.6.2	Ramp Input to Type 2 System.....	5-12
5.6.3	Parabolic Input to Type 2 System.....	5-13
5.6.4	Disadvantages of Static Error Coefficient Method.....	5-14
5.6.5	Examples on Steady State Response.....	5-14
5.7	Transient Response.....	5-19
5.7.1	Analysis of First Order Systems.....	5-19
5.7.2	Analysis of Second Order System.....	5-21
5.7.2(A)	Damping Factor and Natural Frequency of Oscillation.....	5-21
5.7.2(B)	Natural Frequency of Oscillation ( $\omega_n$ ).....	5-22
5.7.2(C)	Position of Poles in a 2nd Order System.....	5-22
5.7.3	Effect of $\xi$ on the Position of Closed Loop Poles.....	5-22
5.7.4	Unit Step Response of a 2nd Order System.....	5-24
5.7.5	Time Response of a Second Order System with $0 < \xi < 1$ .....	5-27
5.7.5(A)	Derivation of Unit Impulse Response of a 2 <sup>nd</sup> Order Underdamped System.....	5-27
5.7.5(B)	Derivation of Unit Step Response of a 2 <sup>nd</sup> Order Underdamped System.....	5-28
5.8	Transient Response Specifications.....	5-30
5.8.1	Derivation of Rise Time ( $T_r$ ).....	5-31
5.8.2	Derivation of Peak Time ( $T_p$ ).....	5-32
5.8.3	Derivation of Peak Overshoot ( $M_p$ ).....	5-33
5.8.4	Derivation of Settling Time ( $T_s$ ).....	5-34
5.9	Solved Problems on Transient Response.....	5-34
5.10	Sensitivity.....	5-45

**Chapter 6 : Stability****6-1 to 6-25**

6.1	Introduction.....	6-1
6.1.1	Stable System.....	6-1
6.1.2	Unstable System.....	6-1
6.1.3	Marginally Stable System.....	6-2
6.2	Time Response of Poles.....	6-2
6.3	Hurwitz Stability Criterion.....	6-7
6.3.1	Disadvantages of the Hurwitz Criterion.....	6-8
6.4	Routh Stability Criterion.....	6-8
6.5	Routh Criterion Special Cases.....	6-11
6.5.1	Special Case 1.....	6-11
6.5.2	Special Case 2.....	6-13
6.6	Relative Stability.....	6-16
6.7	Application of Routh's Criterion.....	6-17
6.8	Solved Examples.....	6-18

**Chapter 7 : Root Locus****7-1 to 7-37**

7.1	Introduction.....	7-1
7.2	Angle and Magnitude Condition.....	7-2
7.3	Construction of Root Locus.....	7-3
7.3.1	General Method for Drawing Root Locus.....	7-3
7.4	Determining the Value of k from the Damping Ratio.....	7-8
7.5	Steps for Solving Problems on Root Locus.....	7-8
7.6	Solved Examples.....	7-9
7.7	Some Additional Important Points.....	7-34
7.7.1	More Zeros and Less Poles.....	7-34
7.7.2	Value of Gain Margin.....	7-34
7.7.3	Phase Margin from Root Locus.....	7-34
7.8	Effect of Addition of Poles and Zeros on Root Locus.....	7-34
7.8.1	Effect of Addition of Poles.....	7-34
7.8.2	Effect of Addition of Zeros.....	7-35

**Chapter 8 : Frequency Response Analysis****8-1 to 8-15**

8.1	Introduction.....	8-1
8.2	Frequency Response.....	8-1
8.2.1	Sinusoidal Response of a Linear System.....	8-1
8.2.2	Methods Used in Frequency Response.....	8-3
8.2.3	Advantages of Frequency Response Analysis.....	8-3
8.2.4	Time Response and Frequency Response Analysis.....	8-3
8.2.5	Disadvantages of Frequency Response Methods.....	8-3

8.3	Transfer Function and Frequency Response.....	8-3
8.3.1	Transfer Function and Frequency Response of a R - C Circuit.....	8-4
8.4	Frequency Response Specifications.....	8-5
8.5	Co-relation between Time and Frequency Domain.....	8-6
8.5.1	Derivation of $\omega_r$ and $M_r$ .....	8-6
8.5.2	Relationship between Frequency Response Specifications and Time Response Specifications.....	8-7
8.6	Bandwidth.....	8-8
8.7	Solved Examples.....	8-9

### Chapter 9 : Bode Plots 9-1 to 9-55

9.1	Introduction.....	9-1
9.2	Log-Scales.....	9-2
9.2.1	Why Do We Use the Log Scales on the X-axis ? .....	9-2
9.2.2	What are Log-Scales ?.....	9-2
9.2.3	Scale Marking.....	9-3
9.3	Standard Form for GH ( $j\omega$ ).....	9-3
9.4	Bode Plots of Standard Factors .....	9-4
9.4.1	Bode Gain Factor $K_1$ .....	9-4
9.4.2	Poles at Origin or Integral Factor $\left(\frac{1}{j\omega}\right)^k$ .....	9-4
9.4.3	Zeros at Origin or Derivative Factor ( $j\omega$ ) <sup>g</sup> .....	9-6
9.4.4	First Order Poles $\frac{1}{\left(1 + j\frac{\omega}{p_1}\right)}$ .....	9-6
9.4.5	First Order Zeros $\left(1 + j\frac{\omega}{z_1}\right)$ .....	9-8
9.4.6	Second Order Poles.....	9-8
9.4.7	Second Order Zeros.....	9-10
9.5	Frequency Domain Specifications.....	9-11
9.5.1	Gain Margin (G.M.).....	9-11
9.5.2	Phase Margin ( $\phi_{pm}$ ).....	9-11
9.5.3	Bandwidth.....	9-12
9.5.4	Cut off Frequency ( $\omega_c$ ).....	9-12
9.5.5	Cut off Rate .....	9-12
9.5.6	Resonance Peak Frequency ( $M_p$ ).....	9-12
9.5.7	Resonant Frequency ( $\omega_p$ ).....	9-12
9.5.8	Gain Crossover Frequency ( $\omega_{gc}$ ).....	9-12
9.5.9	Phase Margin Angle ( $\gamma$ ).....	9-12
9.5.10	Phase Crossover Frequency ( $\omega_{pc}$ ).....	9-12
9.6	Relative Stability.....	9-12
9.7	Steps for Solving Bode Plots.....	9-14

9.8	Summary of Bode Magnitude and Phase Plots of Various Terms.....	9-14
9.9	How to Draw Lines of 20, 40, 60 dB/dec ?.....	9-15
9.10	Advantages of Bode Plots.....	9-17
9.11	Solved Examples.....	9-17
9.12	Other Terms in Bode Plots.....	9-48
9.12.1	Bode Plot for Transportation Lag .....	9-48
9.13	All-Pass and Minimum Phase Functions .....	9-53
9.14	Determination of $k_p$ , $k_v$ , $k_a$ from Bode Plots .....	9-54

### Chapter 10 : Polar and Nyquist Plots 10-1 to 10-34

10.1	Introduction.....	10-1
10.2	Polar Plots.....	10-1
10.2.1	Advantages of Polar Plots.....	10-1
10.2.2	Polar Plot of a 1 <sup>st</sup> Order Pole $\left(\frac{1}{s+p}\right)$ .....	10-2
10.3	Effect of Adding More Simple Poles.....	10-3
10.4	Effect of Adding Pole at Origin.....	10-5
10.5	Stability on Polar Plots.....	10-10
10.5.1	A Simple Way to Check Stability on Polar Plots.....	10-12
10.6	Nyquist Analysis - Mapping.....	10-13
10.7	Nyquist Stability Criterion.....	10-15
10.7.1	Actual Encirclement.....	10-16
10.7.2	Modified Nyquist Contour.....	10-16
10.7.3	Advantages of Nyquist Plot .....	10-17
10.8	Relative Stability.....	10-17
10.9	Solved Examples.....	10-17

### Chapter 11 : Compensator Design 11-1 to 11-34

11.1	Introduction.....	11-1
11.2	Series Compensation.....	11-2
11.3	Gain Adjustment.....	11-2
11.4	Standard Compensators.....	11-4
11.5	Lead Compensator .....	11-4
11.6	Lag Compensators.....	11-6
11.7	Difference between Phase Lead and Lag Compensation.....	11-7
11.8	Lag - Lead Compensator.....	11-7
11.9	Design of Compensators using Bode Plot.....	11-8
11.9.1	Bode Plot of Lead Compensator .....	11-8
11.9.1(A)	Derivation of Maximum Phase-Lead Frequency ( $\omega_m$ ).....	11-9

11.9.1(B) Derivation of Maximum Phase Lead Angle ( $\phi_m$ ).....	11-9	13.5.1 Definition of State and State Variables, State Vectors and State Space .....	13-2
11.9.2 Steps to Design Lead Compensator .....	11-10	13.6 State Variable Representation of Control System .....	13-4
11.9.3 Design of Lag Compensator using Bode Plot .....	11-17	13.6.1 State Model of Linear Systems .....	13-5
11.9.4 Steps to Design a Lag Compensator .....	11-18	13.7 State Diagram Representation.....	13-6
11.9.5 Bode Plot of Lag-Lead Compensator .....	11-21	13.7.1 Non-uniqueness of the State Variable.....	13-6
11.10 Compensation using Root Locus .....	11-25	13.8 State Space Representation by Specific Types of State Variables .....	13-7
11.10.1 Lead Compensator Design using Root Locus .....	11-25	13.8.1 Different Representation of State Model.....	13-7
11.10.2 Designing a Lag Compensator using Root Locus .....	11-28	13.8.2 Forming State Models by Physical Variables.....	13-7
11.10.3 Designing Lag-Lead Compensator using Root Locus .....	11-30	13.8.3 Forming State Model by Phase Variables.....	13-9
<b>Chapter 12 : Controllers 12-1 to 12-10</b>		13.8.4 State Space Representation using Phase Variable in Observable Controllable Form .....	13-10
12.1 Introduction to Controllers.....	12-1	13.8.5 Explanation of State Variable Model by Phase Variables using Differential Equation.....	13-11
12.2 Types of Controllers .....	12-1	13.9 To Obtain Transfer Function from State Variable Model and Vice Versa .....	13-12
12.2.1 ON-OFF Controllers.....	12-1	13.9.1 To Obtain State Variable Form from Transfer Function .....	13-15
12.2.2 Proportional Controller (P-Controller) .....	12-1	13.9.2 Canonical Form of State Variable Model .....	13-16
12.2.3 Proportional + Integral Controller (P-I Controller).....	12-4	13.10 Diagonalisation.....	13-18
12.2.4 Proportional + Derivative Controller (P-D Controller).....	12-5	13.10.1 Eigen Values and Eigen Vectors .....	13-18
12.2.5 Proportional-Integral-Derivative Controller (P-I-D Controller).....	12-6	13.10.2 To Obtain Model Matrix.....	13-18
12.3 Effect of Proportional, Integral and Derivative Control on the Time Response of the System.....	12-7	13.11 Equivalent State Equations.....	13-20
12.4 Solved Examples.....	12-7	13.12 Solution of LTI State Equations .....	13-20
<b>Chapter 13 : State Space Analysis 13-1 to 13-31</b>		13.12.1 Solution of Homogeneous State Equation .....	13-20
13.1 Introduction.....	13-1	13.12.2 Properties of State Transition Matrix.....	13-21
13.2 Difference between State Space Analysis and Transfer Function.....	13-1	13.12.3 Solution of Non-homogeneous State Equation.....	13-22
13.3 Advantages and Disadvantages of Conventional Control Theory .....	13-1	13.12.4 Another Way of Solution of LTI State Equations.....	13-23
13.4 Advantages and Disadvantages of Modern Control Theory .....	13-1	13.12.4(A) Solution in Time Domain .....	13-23
13.5 Concepts of State, State Variables and State Model .....	13-2	13.12.5 Properties of State Transition Method .....	13-23
		13.12.6 Solution using Laplace Transform .....	13-24
		13.12.7 Controllability and Observability.....	13-24
		13.12.8 Transformations.....	13-28
		13.12.9 Transformation to Observable Canonical form CCF.....	13-28
		13.12.10 Another way of Computation by Canonical Transformation.....	13-29
