

**Module I****Chapter 1 : Complex Numbers 1-11 to 1-42**

1.1	Introduction of Complex Numbers	1-1
1.2	Operations of Complex Numbers.....	1-1
1.3	Example based on Operations of Complex Numbers.....	1-2
1.4	Polar Form of the Complex Numbers	1-5
1.5	Example based on Polar Form of Complex Number	1-6
1.6	Exponential Form of the Complex Numbers	1-8
1.7	Properties of Modulus and Argument of the Complex Numbers.....	1-9
1.7.1	Conjugate Numbers.....	1-9
1.8	Some Example based on Modulus and Argument.....	1-9
1.9	De Moivre's Theorem	1-11
1.9.1	Examples based on De Moivre's Theorem.....	1-12
1.10	Application of De Moivre's Theorem to Find the Root of An Equation.....	1-21
1.11	Examples based on Root of an Equation	1-22
1.12	Expansion of $\cos^n \theta$, $\sin^n \theta$ in terms of sines or cosines of Multiples of θ	1-30
1.12.1	Examples based on expansion of $\cos^n \theta$, $\sin^n \theta$ in terms of sines or cosines of multiples of θ	1-31
1.13	Expansion of $\sin(n\theta)$, $\cos(n\theta)$ in powers of $\sin \theta$, $\cos \theta$	1-36

MODULE II**Chapter 2 : Hyperbolic Functions 2-1 to 2-39**

2.1	Introduction.....	2-1
2.2	Circular Functions of a Complex Numbers.....	2-1
2.3	Hyperbolic Functions	2-1
2.4	Relationship between Hyperbolic and Circular Functions.....	2-2
2.5	Hyperbolic Identities.....	2-2
2.6	Examples based on Definition of Hyperbolic Functions.....	2-3
2.7	Example based on Hyperbolic Identify.....	2-6
2.8	Inverse Hyperbolic Functions	2-11
2.8.1	Examples based on Inverse Hyperbolic Functions.....	2-11
2.9	Separation of Real and Imaginary Parts	2-16
2.10	Logarithm of a Complex Number.....	2-29

MODULE III**Chapter 3 : Partial Differentiation 3-1 to 3-47**

3.1	Introduction	3-1
3.2	Notation	3-1
3.3	Geometrical Interpretation.....	3-1
3.4	Principles of Partial Derivative.....	3-1
3.5	Example based on Cartesian and Polar Co-Ordinates ...	3-2
3.6	Partial Differentiation of Composite Function	3-18
3.7	Example based on Composite Function.....	3-18
3.8	Partial Differentiation of Implicit Function	3-29
3.9	Example Based on Implicit Function	3-29
3.10	Homogeneous Functions.....	3-34
3.10.1	Eulers Theorem : (For two variables).....	3-34
3.10.2	Eulers Theorem (For Three Variable)	3-34
3.10.3	Corollary 1	3-35
3.10.4	Corollary 2	3-35
3.10.5	Corollary 3	3-36
3.10.6	Corollary 4	3-36
3.11	Example based on Homogeneous Function.....	3-36

MODULE IV**Chapter 4 : Applications of Partial Differentiation 4-1 to 4-15**

4.1	Introduction	4-1
4.2	Maxima and Minima.....	4-1
4.3	Examples based on Maxima and Minima	4-2
4.4	Lagrange's Method of Undertermined Multipliers :.....	4-8
4.5	Jacobian.....	4-13
4.5.1	Examples based on Definition of Jacobian.....	4-13

Chapter 5 : Successive Differentiation 5-1 to 5-34

5.1	Introduction	5-1
5.2	Standard Results.....	5-1
5.2.1	Algebraic Function.....	5-1
5.2.2	Trigonometric Function.....	5-2
5.2.3	Exponential Function	5-3
5.3	Examples based on Algebraic Function	5-4
5.4	Examples based on Trigonometric Function.....	5-10
5.5	Example based on Exponential Function	5-13
5.6	Miscellaneous Examples.....	5-17
5.7	Leibnitz's Theorem	5-22
5.8	Example based on Leibnitz's Theorem	5-22

**MODULE V****Chapter 6 : Matrices - I 6-1 to 6-37**

6.1	Introduction.....	6-1
6.1.1	Matrix.....	6-1
6.1.2	Row Matrix.....	6-1
6.1.3	Column Matrix.....	6-1
6.1.4	Null Matrix.....	6-1
6.1.5	Square Matrix.....	6-1
6.1.6	Diagonal Matrix.....	6-1
6.1.7	Identity Matrix.....	6-1
6.1.8	Upper Triangular Matrix.....	6-2
6.1.9	Lower Triangular Matrix.....	6-2
6.1.10	Triangular Matrix.....	6-2
6.1.11	Singular and Non-Singular Matrices.....	6-2
6.1.12	Transpose of a Matrix.....	6-2
6.1.13	Symmetric Matrix.....	6-2
6.1.14	Skew Symmetric Matrix.....	6-2
6.1.15	Conjugate Transpose of a Matrix.....	6-2
6.1.16	Hermitian Matrix.....	6-3
6.1.17	Skew Hermitian Matrix.....	6-3
6.1.18	Orthogonal Matrix.....	6-3
6.1.19	Unitary Matrix.....	6-3
6.1.20	Properties of Conjugate Transpose of a Matrix.....	6-3
6.2	Elementary Transformations.....	6-18
6.2.1	Elementary Matrix.....	6-18
6.2.2	Rank of a Matrix.....	6-18
6.2.3	Echelon Form of a Matrix.....	6-19
6.2.4	Normal Form.....	6-19

Chapter 7 : Matrices - II 7-1 to 7-21

7.1	Introduction.....	7-1
7.2	Homogeneous Linear Equations.....	7-1
7.2.1	Solution of Homogeneous Linear Equations.....	7-1
7.3	Non-homogeneous Linear Equations.....	7-6
7.3.1	Solution of Non-homogeneous Systems.....	7-6

7.4	Application of Inverse of a Matrix to Coding Theory....	7-15
7.4.1	Introduction.....	7-15
7.4.2	Some Definitions.....	7-15
7.4.3	Modular Mathematics.....	7-15
7.4.3.1	Definition.....	7-16
7.4.4	Coding and Decoding.....	7-16
7.4.5	Encipherment with a Hill cipher.....	7-17
7.4.5.1	Working Rule /Algorithm for Encoding and decoding.....	7-17
7.4.6	Deciphering Ciphertext with Given Hill Key.....	7-19

MODULE VI**Chapter 8 : Numerical Methods 8-1 to 8-27**

8.1	Solution of Transcendental Equations.....	8-1
8.1.1	Newton Raphson Method.....	8-1
8.1.2	Regula Falsi Method (Method of False Position).....	8-8
8.2	Solution of System of Linear algebraic Equation.....	8-16
8.2.1	Iterative Method.....	8-16
8.2.2	Jacobi's Method.....	8-16
8.2.3	Gauss-Seidel Method.....	8-20

Chapter 9 : Expansion of Functions 9-1 to 9-17

9.1	Introduction.....	9-1
9.2	Taylor's Series Theorem.....	9-1
9.3	Examples based on Expansion in Powers of $(x - a)$	9-1
9.4	Examples based on Expansion in Powers of x or h	9-3
9.5	Examples to Find Approximate Value.....	9-5
9.6	Maclaurin's Series Theorem.....	9-6
9.7	Some Standard Series Expansions.....	9-6
9.8	Examples based on Standard Expansions.....	9-9
9.9	Examples based on Differentiation and Integration Method.....	9-12
9.10	Examples based on Method of Substitution.....	9-14
9.11	Examples based on Method of Inversion.....	9-16
