

**UNIT I****Chapter 1 : Introduction to Refrigeration 1-1 to 1-21****Syllabus :**

- 1.1 Necessity of Refrigeration, Unit of Refrigeration, concept of COP (actual and Theoretical)
- 1.2 Reversed Carnot cycle and its representation on P-V and T-S diagram
- 1.3 Bell coleman cycle and its representation on P-V and T-S diagram with simple numerical.
- 1.4 Air refrigeration system, component of air refrigeration system, Its applications

1.1	Introduction of Refrigeration	1-1
1.1.1	Necessity of Refrigeration	1-1
1.1.2	Thermodynamic Law Related to Refrigeration	1-2
1.1.3	Refrigeration Effect	1-2
1.1.4	Unit of Refrigeration	1-2
1.1.5	Coefficient of Performance	1-2
1.1.6	Difference between Heat Pump and Refrigerator.....	1-3
1.2	Reversed Carnot Cycle.....	1-3
1.2.1	Limitation of Carnot Cycle	1-5
1.3	Bell Coleman Air Refrigerator Cycle	1-5
1.3.1	Advantages of Bell Coleman Cycle	1-7
1.3.2	Disadvantages of Bell Coleman Cycle	1-7
1.4	Air Refrigeration system	1-7
1.4.1	Reversed Brayton Cycle	1-8
1.4.2	Actual Analysis	1-9
1.4.3	Necessity of Cooling Aircraft	1-10
1.4.3.1	Various Air-Craft Refrigeration Systems	1-10
1.5	Solved Examples.....	1-12

UNIT II**Chapter 2 : Refrigeration Cycles and Refrigerants****2-1 to 2-62****Syllabus :**

- 2.1 Principle of Vapour Compression Cycle, Main components, Representation on P-h and T-S diagram, conditions- dry compression, effect of superheating, effect of undercooling, Calculation of Refrigeration capacity and Power required. Multistage-Vapour compression Refrigeration system, its necessity, advantages and applications.

- 2.2 Vapour Absorption Cycle, principle, its component, working of Aqua -Ammonia Vapour absorption system, working of Li-Br absorption system, Electrolux refrigerator- working, main components, applications. Comparison between Vapour Compression system and Vapour absorption system
- 2.3 Refrigerants, desirable properties, classification, designation of refrigerant, selection of refrigerant for relevant applications, System vaccumisation Charging processes, leak testing methods and process.
- 2.4 Montreal protocol, Kyoto protocol. Concept of Ozone Layer Depletion, Green House effect, Global warming, Eco friendly Refrigerants.
- 2.5 Applications of Refrigeration, House hold refrigerators, Water coolers, name of Manufacturers and their products with capacity.

2.1	Simple Vapour Compressor Cycle.....	2-1
2.1.1	Components of Vapour Compression Refrigeration Cycle	2-2
2.1.2	Representation of P-h and T-S diagram according to Condition of Cycle	2-4
2.1.3	Pressure-Enthalpy and Temperature-Entropy Diagram for Simple Vapour Compression Refrigeration Cycle	2-4
2.1.4	Superheating	2-6
2.1.5	Subcooling (Undercooling)	2-7
2.1.6	Comparison of Dry and Wet Compression	2-8
2.1.7	Difference between Ideal and Actual Vapour Compression	2-8
2.1.8	Calculation of Refrigeration Capacity and Power Required	2-9
2.1.9	Methods of Improving C.O.P	2-9
2.1.10	Multistage Vapour Compression Refrigeration System	2-9
2.2	Vapour Absorption System.....	2-12
2.2.1	Principle of Absorption System	2-12
2.2.2	Simple Vapour Absorption Refrigeration System (Aqua-Ammonia Vapour Absorption System)	2-13
2.2.3	Practical Vapour Absorption Refrigeration System (Practical Aqua-Ammonia Vapour Absorption Refrigeration System)	2-14

2.2.4	Coefficient of Performance for Vapour Absorption Refrigeration System	2-15
2.2.5	Advantages of Vapour Absorption Refrigeration System Over Vapour Compression Refrigeration System	2-16
2.2.6	Difference between Simple and Practical NH ₃ Absorption System	2-17
2.2.7	Difference between Vapour Compression and Vapour Absorption System	2-17
2.2.8	Electrolux (Domestic) Absorption Refrigeration System or Three Fluid Absorption Refrigeration System	2-18
2.2.9	Lithium Bromide Absorption System	2-19
2.3	Refrigerant	2-44
2.3.1	Classification of Refrigerant	2-44
2.3.1.1	Primary Refrigerants	2-44
2.3.1.2	Secondary Refrigerant	2-46
2.3.2	Difference between Primary and Secondary Refrigerant	2-46
2.3.3	Desirable Properties of Refrigerant	2-46
2.3.4	Designation (Nomenclature) of Refrigerants	2-49
2.3.5	Selection of Refrigerant for Relevant Application	2-50
2.3.6	Applications of Refrigerant	2-51
2.4	Refrigerant System Vaccumisation.....	2-51
2.5	Charging Processes	2-51
2.6	Montreal protocol and Kyoto protocol	2-53
2.6.1	Concept of Ozone layer Depletion	2-53
2.6.2	Concept of Green House Effect	2-54
2.7	Eco - Friendly Refrigerant.....	2-55
2.7.1	R - 134 - a (HFC - 134a) (Tetrafluoroethene)	2-55
2.7.2	Hydrocarbon Refrigerants	2-55
2.7.3	Major Applications of Refrigeration	2-56
2.7.4	Domestic Refrigerator	2-57
2.7.4.1	Water cooler	2-60
2.8	Manufacturer their product and capacity.....	2-61

UNIT III**Chapter 3 : Refrigeration System Components****3-1 to 3-33****Syllabus :**

- 3.1 Refrigeration compressor, classifications, construction and working of hermetically sealed compressor, open type compressor, rotary compressors- centrifugal, Screw and Scroll compressors and their applications.
- 3.2 Condensers – classifications, working of air and water-cooled condensers, evaporative condensers , comparison and applications.
- 3.3 Evaporators- Classification- working of finned type, bared tube, plate type, flooded, shell and tube type evaporators, their applications. Chillers- Direct expansion and flooded type chillers, working and applications.
- 3.4 Expansion device- classifications, capillary tube, automatic expansion valve, Thermostatic expansion valve, selection, working and application.
- 3.5 Other components- Drier, Solenoid valve, Thermostatic switch, defrosting devices, working and applications.

3.1	Compressors.....	3-1
3.1.1	Classification of Compressors	3-1
3.1.2	Hermetically Sealed Compressor	3-2
3.1.3	Open Type Reciprocating Compressor	3-4
3.1.4	Difference between Open Type and Hermetically Sealed Compressor	3-5
3.2	Rotary Compressor	3-6
3.2.1	Centrifugal Compressor	3-6
3.2.2	Screw Compressor	3-7
3.2.3	Scroll Compressor	3-8
3.2.3.1	Working of Scroll Compressor	3-9
3.3	Introduction to Condensers	3-10
3.3.1	Classification of Condenser	3-10
3.3.1.1	Air Cooled Condenser	3-10
3.3.2	Type of Air Cooled Condenser	3-11

3.3.3	Types of Water Cooled Condenser	3-12
3.3.4	Evaporative Condenser	3-14
3.3.5	Comparison between Air and Water Cooled Condenser	3-15
3.4	Evaporators and Chillers	3-16
3.4.1	Classification of Evaporators	3-16
3.4.1.1	Extended Surface Evaporator (Finned Evaporator)	3-17
3.4.1.2	Bare-Tube Evaporator	3-18
3.4.1.3	Plate Sheet Type Evaporator	3-18
3.4.1.4	Flooded Evaporator	3-19
3.4.1.5	Dry Expansion Evaporator	3-20
3.4.1.6	Shell and Tube type Evaporator	3-20
3.5	Classification of Chillers	3-21
3.5.1	D-X Chillers	3-21
3.5.2	Flooded Chillers	3-22
3.6	Expansion Devices	3-23
3.6.1	Capillary Tube	3-24
3.6.2	Thermostatic Expansion Valve	3-24
3.6.3	Automatic Expansion Valve or Constant Pressure Valve	3-25
3.6.4	Comparisons	3-26
3.7	Selection Criteria for Vapour Compression Refrigeration System Components	3-27
3.7.1	Selection of Condenser for Ice Plant	3-28
3.7.2	Selection of Evaporator for Ice Plant	3-28
3.7.3	Selection of Compressor for Domestic Refrigerator	3-28
3.7.4	Selection of Expansion Device (Capillary Tube) for Domestic Refrigerator	3-29
3.8	Other components	3-29
3.8.1	Drier-strainer	3-29
3.9	Solenoid Valve	3-29

3.10	Thermostatic Switch	3-30
3.11	Thermostatic (Control)	3-31
3.12	Defrost Device (Heater)	3-32

UNIT IV

Chapter 4 : Basics of Air Conditioning 4-1 to 4-41

Syllabus :

4.1	Air conditioning- necessity, types of air conditioning- comfort air conditioning, industrial air conditioning, applications.	
4.2	Principle of Psychrometry, Dalton's law of partial pressure, air properties.	
4.3	Psychrometric processes, Representation of processes on Psychrometric chart. Types and construction of Psychrometers.	
4.4	Components used for air conditioning-Humidifiers, dehumidifiers, filters, heating and cooling coils.	
4.1	Air Conditioning	4-1
4.2	Types of Air Conditioning Systems	4-2
4.2.1	Industrial and Commercial Air Conditioning Systems	4-2
4.3	Applications Areas of Air Conditioning Systems	4-3
4.3.1	Application of Commercial Air Conditioning	4-3
4.3.2	Applications of Industrial Air Conditioning	4-4
4.3.3	Automobile Air Conditioning	4-5
4.3.4	Railway Air Conditioning	4-5
4.3.5	Air Craft Air Conditioning	4-5
4.4	Special Application of Air Conditioning	4-5
4.4.1	Air Conditioning for Computer Centre	4-5
4.4.2	Air Conditioning of Television Centre	4-6
4.4.3	Air Conditioning of Automatic Telephone Exchange Building	4-6
4.5	Principle of Psychrometry	4-6
4.5.1	Dalton's Law of Partial Pressures	4-6
4.6	Properties of Air	4-6
4.6.1	Dry Air	4-6
4.6.2	Moist Air	4-7

4.6.3	Saturated Air	4-7
4.6.4	Dry Bulb Temperature	4-7
4.6.5	Wet Bulb Temperature	4-7
4.6.6	Wet Bulb Depression	4-7
4.6.7	Dew Point Temperature	4-7
4.6.8	Dew Point Depression	4-8
4.6.9	Specific Humidity (W) or Humidity Ratio	4-8
4.6.10	Degree of Saturation or Percentage Humidity (μ)	4-9
4.6.11	Relative Humidity (ϕ)	4-10
4.6.12	Absolute Humidity or Vapour Density (ρ_v)	4-10
4.6.13	Enthalpy (Total Heat) of Moist Air	4-11
4.6.14	Pressure of Water Vapour (Vapour Pressure)	4-11
4.7	Psychrometric Charts	4-12
4.8	Psychrometric Processes	4-13
4.9	Description and Representation of Psychrometric Processes	4-14
4.9.1	Sensible Cooling	4-14
4.9.2	Sensible Heating	4-15
4.9.3	Bypass Factor (BF)	4-15
4.9.4	Humidification and Dehumidification	4-16
4.9.5	Heating and Humidification	4-17
4.9.6	Cooling with Dehumidification	4-18
4.9.7	Cooling with Adiabatic Humidification [Evaporative Cooling]	4-19
4.9.8	Heating and Dehumidification or Adiabatic Chemical Dehumidification	4-20
4.10	Components used for Air-conditioning like Humidifier, Dehumidifier, Filter, Heating and Cooling Coils	4-22
4.11	Introduction of Humidifiers	4-25
4.11.1	Humidification by Injection of Steam	4-25
4.11.2	Humidification by Atomizing the Water into the Air ...	4-25
4.11.3	Revolving Wicks Type Humidifier	4-26
4.11.4	Humidification by Evaporating the Water into the Air	4-26
4.11.4.1	Pan and Coil Type Humidifier	4-27

4.11.4.2	Humidification by Air Washing	4-27
4.12	Dehumidifiers	4-28
4.12.1	Spray Type Dehumidifier	4-28
4.12.2	Cooling Coil Type Dehumidifier	4-29

UNIT V**Chapter 5 : Cooling Load Calculation 5-1 to 5-18****Syllabus :**

- 5.1 Comfort condition, heat exchange by human body with environment, factors affecting on human comfort.
- 5.2 Calculation of Sensible and Latent heat gain sources.
- 5.3 Cooling load calculation for- auditorium, Metrology laboratory, class room.

5.1	Comfort Condition	5-1
5.1.1	Effective Temperature	5-1
5.1.2	Thermal or Heat Exchange by human Body with Environment	5-2
5.1.3	Factors Affecting Human Comfort	5-3
5.2	Components of Cooling Load	5-4
5.2.1	Sensible Heat Load	5-5
5.2.2	Latent Heat Load	5-6
5.3	Calculation of Cooling Load	5-6
5.3.1	Heat Gain by Conduction through Building Structure	5-7
5.3.2	Heat Gain from Solar Radiation	5-9
5.3.3	Solar Heat Gain through Glasses	5-9
5.3.4	Load Due to Occupant / Person	5-9
5.3.5	Heat Gain due to Infiltration	5-10
5.3.6	Ventilation	5-11
5.3.7	Equipment Load	5-11
5.3.8	Product Load	5-11
5.3.9	Miscellaneous Heat Gain	5-11
5.3.10	Safety Factor	5-12
5.4	Cooling Load Calculation of Auditorium	5-12

5.4.1	Cooling Load Calculation for MQC laboratory of institute for Air Conditioning	5-14
5.4.2	Cooling Load Calculation for class room	5-14

UNIT VI

Chapter 6 Air Conditioning Systems 6-1 to 6-32

Syllabus	
6.1 Classification of air conditioning system- Summer and winter, Year around air conditioning, construction, application, comparison.	
6.2 Construction and working of window, split, package type air conditioners.	
6.3 Central air conditioning- types, direct and indirect central air conditioning construction, capacity, application.	
6.4 Concept of air handling unit, air distribution system- closed perimeter system, extended plenum system, radial duct system, losses in ducts, construction and application of supply, return and make up ducts, grills diffusers, types of fans and blowers.	
6.5 Insulation- purpose, types of insulation, material and their properties.	
6.6 Introduction to Automobile Air conditioning system.
