

Unit I

Syllabus : Review of 3D Coordinate Geometry, Vector Calculus, Physical significance of Gradient, Divergence, Curl, Electric field intensity (E), Displacement Flux Density (D), Gauss's law, Electric potential (V), Potential Gradient, E/D/V due to uniform sources (point charge, infinite line charge, infinite surface charge), Maxwell Equations for Electrostatics, Current, Current Density, physical interpretation.

Chapter 1 : Electrostatics 1-1 to 1-33

1.1	Sources and Effects of Electromagnetic Field	1-1
1.2	Co-ordinate System.....	1-1
1.2.1	Cartesian Co-ordinate System.....	1-1
1.2.1(A)	Point in Cartesian Plane	1-2
1.2.1(B)	Unit Vectors in Cartesian System	1-3
1.2.1(C)	Differential Length, Area and Volume in Cartesian Co-ordinate System.....	1-3
1.2.2	Cylindrical Co-ordinate System	1-3
1.2.2(A)	Unit Vectors in Cylindrical System.....	1-4
1.2.2(B)	Differential Length, Area and Volume in Cylindrical Co-ordinate System.....	1-4
1.2.2(C)	How to Convert Cartesian to Cylindrical System and Vice-versa?.....	1-4
1.2.3	Spherical Co-ordinate System	1-5
1.2.3(A)	Unit Vectors in Spherical System	1-5
1.2.3(B)	Differential Lengths, Area and Volume	1-5
1.2.3(C)	How to convert Cartesian to Spherical System and Vice-versa ?.....	1-6
1.3	Vector Fields : Gradient, Divergence and Curl.....	1-6
1.3.1	Gradient	1-7
1.3.2	Divergence	1-7
1.3.3	Curl	1-8
1.4	Coulomb's Law of Electrostatics.....	1-10
1.4.1	Dielectric Constant (K) or Relative Permittivity	1-10
1.4.2	Coulomb's Law in Vector Form.....	1-10
1.4.3	Solved Examples on Coulomb's Law (Due to 2 charges).....	1-11

1.4.4	Principle of Superposition of Forces	1-12
1.5	Electric Field Intensity (\vec{E}).....	1-14
1.5.1	Electric Field.....	1-14
1.5.2	Definition of Electric Field Intensity.....	1-15
1.5.3	Derivation of Electric Field Intensity.....	1-15
1.5.4	Electric Field Intensity due to Discrete Charges	1-16
1.5.5	Solved Examples on Electric Field Intensity	1-16
1.6	Electric Field Intensity due to Continuous Charges....	1-18
1.7	Electric Field Due to an Infinite Line Charge.....	1-19
1.7.1	Solved Examples on Line Charge.....	1-20
1.8	Electric Field Intensity due to Infinite Sheet Charge (Surface Charge).....	1-24
1.8.1	Solved Examples on Sheet Charge	1-25
1.9	Electric Field Intensity due to Volume Charge Distribution.....	1-31
1.9.1	Solved Examples on Volume Charge Distribution.....	1-32

Chapter 2 : Gauss's Law and Electric Potential 2-1 to 2-44

2.1	Introduction	2-1
2.2	Electric Flux.....	2-1
2.2.1	Properties of Electric Flux (ψ).....	2-1
2.3	Electric Flux Density (\vec{D}).....	2-2
2.3.1	Relationship Between \vec{D} and \vec{E}	2-2
2.3.2	Solved Examples on Electric Flux Density	2-3
2.4	Gauss's Law.....	2-6
2.5	Applications of Gauss's Law.....	2-7
2.5.1	The Case of Point Charge	2-7
2.5.2	The Case of Infinite Line Charge	2-8
2.5.3	The Case of Infinite Sheet Charge	2-9
2.5.4	The Case of Co-axial Cable.....	2-10
2.5.5	Application of Gauss's Law for Uniformly Charged Sphere	2-11
OR	Derivation of \vec{E} due to Uniform Volume Charge Density (ρ_V) C/m ³ Distributed in a Sphere of Radius 'a' Centered at Origin.....	2-11

2.5.6	Application of Gauss's Law for Spherical Shell of Charge.....	2-13
OR	Derivation of \vec{E} due to Uniform Surface Charge Density ρ_S (C/m^2) Distributed on the Surface of a Sphere of Radius 'a' Centered at Origin	2-13
2.5.7	Solved Examples on Gauss's Law.....	2-14
2.6	Divergence Theorem	2-21
2.6.1	Solved Examples on Divergence Theorem	2-22
2.7	Work Done in Moving a Point Charge.....	2-27
2.7.1	Proof of "Work Done is Independent of Distance Travelled"	2-28
2.7.2	Solved Examples on Work Done	2-28
2.8	Electric Potential	2-31
2.8.1	Potential Difference (P.D.).....	2-31
2.8.2	Potential due to a Point Charge.....	2-31
2.8.3	Scalar or Absolute Potential	2-31
2.8.4	Electrical Potential due to Charge Distributions	2-32
2.8.5	Potential Difference in the Field of Infinite Line Charge.....	2-33
2.8.6	Potential Difference in the Field of an Infinite Surface Charge	2-34
2.9	Equipotential Surfaces.....	2-34
OR	Concept of Uniform and Non-Uniform Fields, Utilization Factor.....	2-34
2.9.1	Conservative Property in Electrostatics	2-35
2.10	Solved Examples on Electric Potential	2-35
2.11	Potential Gradient.....	2-37
2.11.1	Relation Between \vec{E} and \vec{V}	2-38
2.11.2	Solved Examples on Potential Gradient.....	2-38
2.12	Equation for Continuity of Current.....	2-41
2.12.1	Steady State Current.....	2-41
2.12.2	Solved Examples on Current Density	2-42
2.13	Electrostatic Discharge (ESD)	2-43

Unit II

Syllabus : Lorentz force, magnetic field intensity (H), Magnetic Flux Density(B), Biot–Savart's Law – Ampere's Circuit Law – H due to straight conductors, circular loop, infinite sheet of current, Maxwell Equations for Magneto- Statics, physical interpretation.

Chapter 3 : Magnetostatics	3-1 to 3-36	
3.1	Lorentz Force	3-1
3.1.1	Solved Example on Lorentz's Force Equation.....	3-2
3.2	Magnetic Field Intensity (H)	3-2
3.3	Biot-Savart's Law.....	3-2
3.3.1	Mathematical Equation of Biot-Savart's Law	3-3
3.3.2	Solved Examples on Calculation of $d\vec{H}$	3-4
3.4	Magnetic Field Intensity (\vec{H}) due to an Infinite Straight Conductor.....	3-7
3.4.1	Magnetic Field Intensity due to Finite Length Current Filament.....	3-8
3.4.2	Magnetic Field Intensity due to Surface Current Density.....	3-10
3.4.3	Magnetic Field Intensity on the Axis of a Circular Loop	3-10
3.4.4	Solved Examples on Magnetic Field Intensity.....	3-11
3.5	Ampere's Circuital Law	3-18
3.5.1	Application of Ampere's Circuital Law.....	3-19
3.5.2	Solved Examples on Ampere's Circuital Law	3-23
3.6	Curl [Point Form of Ampere's Circuital Law]	3-25
3.7	Stoke's Theorem : (Applications of Ampere's Circuital Law).....	3-26
3.7.1	Solved Examples on Curl and Stoke's Theorem	3-26
3.8	Magnetic Flux Density (\vec{B}) in Free Space and Conductors	3-33
3.8.1	Magnetic Flux over a Closed Surface	3-33
3.8.2	Relation between \vec{B} and \vec{H}	3-34
3.8.3	Magnetic Flux Density and Magnetic Flux of a Co-axial Cable	3-34
3.8.4	Solved Examples on Magnetic Flux Density	3-35

Unit III

Syllabus : Electric Dipole, Dielectric Polarization, Properties of Conductors, Dielectric Materials, Boundary conditions (dielectric-dielectric, conductor – dielectric), Significance and applications of Poisson's and Laplace's equations - Capacitance, Energy density. Magnetization, Magnetic materials, Boundary conditions for Magnetic Fields, Magnetic force, Torque.

Chapter 4 : Boundary Conditions 4-1 to 4-42

4.1	Electric Field in Free Space.....	4-1
4.1.1	Electric Potential due to an Electric Dipole	4-1
4.2	Conductors.....	4-3
4.2.1	Drift Velocity.....	4-3
4.2.2	Equation of Resistance.....	4-3
4.2.3	Properties of Perfect Conductors.....	4-4
4.2.4	Solved Examples on Conductors.....	4-4
4.3	Relaxation Time	4-5
4.3.1	Solved Example on Relaxation Time	4-6
4.4	Dielectrics.....	4-6
4.4.1	Polarization in Dielectrics	4-6
4.4.2	Dielectric Constant and Strength	4-7
4.4.3	Types of Dielectric Medium	4-7
4.4.4	Properties of Dielectric Material.....	4-7
4.4.5	Solved Examples on Dielectrics	4-8
4.5	Electric Field in Multiple Dielectrics	4-10
4.6	Boundary Conditions	4-10
4.6.1	Boundary Condition between Conductor and Free Space.....	4-10
4.6.2	Boundary Condition between Conductor and Dielectric	4-12
4.6.3	Boundary Condition between Conductor- Conductor Interface.....	4-12
4.6.4	Boundary Conditions between Perfect Dielectrics [Dielectric–Dielectric Boundary].....	4-14

4.6.5	Solved Examples on Boundary Conditions	4-15
4.7	Magnetic Materials	4-22
4.7.1	Arrangement of Dipoles in Different Materials	4-24
4.8	Boundary Conditions of Magnetostatics	4-24
4.8.1	Solved Examples on Magnetic Boundary Conditions	4-26
4.9	Poisson's Equation.....	4-32
4.9.1	Poisson's Equation for Magnetostatics	4-32
4.9.2	Biot -Savart's Law based on Magnetic Potential	4-32
4.9.3	Ampere's Circuital Law based on Magnetic Potential	4-34
4.10	Magnetic Force.....	4-34
4.10.1	Force on Differential Current Element	4-35
4.10.2	Force between Differential Current Elements	4-35
4.10.3	Force between Parallel Conductors	4-36
4.11	Torque.....	4-37
4.12	Inductance.....	4-38
4.12.1	Self Inductance	4-38
4.12.2	Mutual Inductance	4-38
4.13	Energy Density	4-39
4.13.1	Solved Examples on Energy Density	4-40
4.14	Applications.....	4-41

Chapter 5 : Laplace and Poisson's Equations 5-1 to 5-24

5.1	Laplace and Poisson's Equations	5-1
5.1.1	Laplace's Equation in Different Co-ordinate System	5-1
5.1.2	Significance of Poisson's and Laplace's Equations	5-2
5.2	Capacitance	5-2
5.2.1	Parallel Plate Capacitor	5-3
5.2.2	Spherical Capacitor	5-4
5.2.2(A)	Isolated Spherical Capacitors.....	5-4
5.2.2(B)	Isolated Spherical Capacitors Coated with Dielectric	5-5
5.2.3	Cylindrical Capacitors (Co-axial Cable).....	5-6
5.2.4	Solved Examples on Capacitors	5-7

5.3	Equation of capacitance using Laplace's and Poisson's Equations	5-12
5.3.1	Parallel Plate Capacitor	5-12
5.3.2	Spherical Capacitor	5-14
5.3.3	Co-axial Capacitor Cable	5-15
5.3.4	Solved Examples on Laplace's and Poisson's Equations	5-17
5.4	Potential Energy Density	5-20
5.4.1	Potential Energy in a Continuous Charge Distribution...	5-20
5.4.2	Solved Examples on Potential Energy of Charged Distribution	5-21

Unit IV

Syllabus : Scalar and Vector Magnetic Potential, Poisson's and Laplace Equations, Faraday's law, Translational and motional emf, Displacement current density, Continuity Equation, Time varying Maxwell's equations - point form, integral form, Power and Poynting theorem, Concept of Retarded magnetic vector potential.

Chapter 6 : Time Varying Electromagnetic Fields : Maxwell Equations 6-1 to 6-32

6.1	Introduction.....	6-1
6.1.1	Scalar and Vector Potential	6-1
6.1.2	Solved Example on Scalar and Vector Potential	6-2
6.2	Faraday's Law	6-3
6.3	Translational and Motional EMF	6-4
6.3.1	Lenz's Law.....	6-5
6.3.2	Solved Examples on Faraday's and Lenz's law.....	6-5
6.4	Displacement Current.....	6-8
6.4.1	Ratio of Conduction Current Density and Displacement Current Density (J_c/J_d).....	6-9
6.4.2	Solved Examples on Displacement Current.....	6-10
6.5	Time Varying Maxwell's Equations in Point Form and Integral Form.....	6-12
6.5.1	Maxwell's Equation for Static Fields	6-12
6.5.2	Maxwell's Equation for Time Varying Fields.....	6-14
6.5.3	Maxwell's Equation for Free Space.....	6-15
6.5.4	Maxwell's Equation for Good Conductor.....	6-15

6.5.5	Solved Examples on Maxwell's Equations	6-16
6.6	Power and Poynting Theorem	6-22
6.6.1	Interpretation of Poynting Theorem	6-24
6.6.2	Energy stored and Radiated Power	6-24
6.6.3	Complex Poynting Vector	6-25
6.6.4	Solved Examples on Poynting Theorem.....	6-26
6.7	Concept of Retarded Magnetic Vector Potential	6-30
6.8	Applications.....	6-32

Unit V

Syllabus : Maxwell's equation using phasor notations, Electromagnetic wave equations (Helmholtz equation), Relation between E and H, depth of penetration, concept of polarization, Reflection by perfect conductor-normal incidence, reflection by perfect dielectric- normal incidence, snell's law.

Chapter 7 : Uniform Plane Waves 7-1 to 7-29

7.1	Maxwell's Equations Using Phasor Notations.....	7-1
7.2	Electromagnetic Wave Equation	7-2
7.2.1	Electromagnetic Wave Equations for Free Space	7-2
7.2.2	Standard Form of Wave Equation	7-4
7.2.3	Electromagnetic Wave Equations for Conductors	7-4
7.3	Relation between \vec{E} and \vec{H}	7-6
7.3.1	Perpendicular Relation between \vec{E} and \vec{H}	7-7
7.4	Plane Waves in Lossless Dielectric Medium (Perfect Dielectric) (Helmholtz Equation).....	7-11
7.5	Velocity of Propagation	7-12
7.5.1	Wave Impedance (Intrinsic Impedance)	7-12
7.6	Solved Examples on EM Waves in Perfect Dielectric....	7-12
7.7	Depth of Penetration (δ)	7-17
7.7.1	Derivation of δ for Good Conductors.....	7-18
7.7.2	Derivation for Velocity and Wavelength in Terms of δ For Good Conductors	7-18
7.8	Surface Impedance and Surface Resistance.....	7-18
7.8.1	Calculation of Surface Resistance for a Rectangular Conductor with Infinite Depth	7-18

7.9	Solved Examples on Intrinsic Impedance, Propagation Constant and Skin Effect.....	7-20
7.10	Concept of Polarization	7-21
7.10.1	Types of Polarization.....	7-21
7.11	Reflection by Perfect Conductor - Normal Incidence	7-23
7.12	Reflection by Perfect Dielectric - Normal Incidence	7-24
7.13	Solved Examples on Reflection.....	7-25
7.14	Snell's Law.....	7-28

Unit VI

Syllabus : Line parameters, skin effect, general solution, physical significance of the equations, wavelength, velocity of propagation, the distortion less line, Reflection on a line not terminated in Z_0 , reflection coefficient, open and short circuited lines, reflection factor and reflection loss, standing waves; nodes; standing wave ratio, Input impedance of dissipation less line, Smith chart and its applications in solving the transmission line parameters.

Chapter 8 : Transmission Line Theory 8-1 to 8-48

8.1	Introduction.....	8-1
8.2	Types of Transmission Lines	8-1
8.3	Line Parameters	8-3
8.3.1	Equivalent Circuit of Transmission Line [of Type Cascaded T Sections].....	8-3
8.3.2	RF Equivalent circuit.....	8-3
8.3.3	Primary Constants.....	8-4
8.3.4	Secondary Constants	8-4
8.3.5	Wavelength, Velocity of Propagation	8-5
8.3.6	Relation between Primary and Secondary Constants	8-6
8.3.7	Practical Values of Z_0 , α and β for Underground Cables	8-9
8.3.8	Solved Examples on Transmission Line	8-10
8.4	Skin Effect.....	8-14
8.5	Distortions in Transmission Line.....	8-14

8.5.1	Distortionless Line (Condition for No Distortion i.e. Lossless Medium)	8-15
8.5.2	How LG = RC Condition Minimizes Distortion.....	8-15
8.5.3	Solved Examples on Distortionless Line	8-16
8.6	General Solution.....	8-17
8.7	Physical Significance of Equation (Finite Length of Line Terminated in Z_0 Infinite Line)	8-20
8.7.1	Equation of Current and Voltage at a Distance x from Receiving End	8-21
8.8	Reflection on a Line not Terminated in Z_0	8-21
8.8.1	Disadvantages of Reflection	8-22
8.8.2	Reflection Co-efficient	8-23
8.9	Open and Short Circuited Line.....	8-24
8.10	Reflection Factor and Reflection Loss	8-25
8.10.1	Solved Examples on Reflection Factor and Reflection Loss	8-25
8.11	Standing Waves, Nodes	8-28
8.12	Standing Wave Ratio (SWR)	8-29
8.12.1	Relation between SWR and Reflection Co-efficient (K)	8-29
8.12.2	Maximum and Minimum Impedance in Terms of SWR.....	8-30
8.13	Input Impedance of Dissipationless Line.....	8-30
8.13.1	Input Impedance in Terms of Reflection Co-efficient	8-31
8.14	Input Impedance of Short Circuited Line.....	8-33
8.15	Input Impedance of an Open Circuited Line.....	8-33
8.15.1	Solved Examples on Open Circuited Line.....	8-34
8.16	Power and Impedance Measurement on Lines	8-35
8.16.1	Measurement of Power.....	8-35
8.16.2	Measurement of Impedance	8-36
8.17	Reflection Losses on the Unmatched Load	8-36
8.18	Problems Solving using Smith Chart	8-37
