

Unit I

Chapter 1 : Flow Over Notches and Weirs 1-1 to 1- 21

Classification of notches and weirs, flow over sharp crested rectangular weir/notch, Francis formula, ventilation of weirs, flow over triangular weir/notch, flow over trapezoidal weir/notch, Cipolletti weir, effect on discharge due to error in measurement of head, broad crested weir, submerged weir, proportional weir or sutro weir. Hydraulic Jump: Assumptions in the theory of hydraulic jump, application of momentum equation to hydraulic jump in rectangular channel: Conjugate depths and relations between conjugate depths. Energy dissipation in hydraulic jump, classification of hydraulic jump and its applications.

1.1	Introductions to Notch.....	1-1
1.2	Introduction to Weir.....	1-1
1.2.1	Classification of Weir.....	1-1
1.2.2	Flow Over Sharp Crested Rectangular weir/ Notch.....	1-2
1.3	Francis Formula.....	1-2
1.4	Ventilation of Weirs.....	1-3
1.5	Flow Over Triangular Weir/Notch.....	1-4
1.6	Flow Over Trapezoidal Notch or Weir.....	1-4
1.7	Cipolletti Weir.....	1-5
1.7.1	Discharge Over Narrow - Crested Weir.....	1-5
1.7.2	Discharge Over Ogee Weir.....	1-5
1.8	Solved Examples.....	1-5
1.9	Effect on Discharge due to Error in Measurement of Head.....	1-7
1.9.1	For Rectangular Weir / Notch.....	1-7
1.9.2	For Triangular Weir / Notch.....	1-8
1.10	Broad Crested Weir.....	1-9
1.11	Submerged Weir.....	1-9
1.12	Proportional Weir or Sutro Weir.....	1-10
1.13	Phenomenon of Hydraulic Jump.....	1-11
1.13.1	Location and Examples of Occurrence Hydraulic Jump.....	1-11
1.13.2	Advantages of Hydraulic Jump.....	1-11
1.13.3	Disadvantages of Hydraulic Jump.....	1-11
1.13.4	Assumptions in the Theory of Hydraulic Jump..	1-11

1.14	Application of Hydraulic Jump in Rectangular Channel.....	1-11
1.14.1	Relation between Conjugate Depths.....	1-12
1.15	Energy Dissipation in Hydraulic Jump.....	1-13
1.16	Classification of Hydraulic Jump.....	1-13
1.17	Gauging Flumes.....	1-14
1.18	Solved Examples.....	1-14

Unit II

Chapter 2 : Laminar Flow & Hydraulics For High Rise Buildings 2-1 to 2-27

Laminar flow between parallel plates: plates at rest, one plate moving and other at rest (Couette flow), laminar flow through porous media. Introduction of high-rise building, importance and significance of plumbing design, list of components in high rise plumbing, provisions for pressure, velocity and discharge as per uniform plumbing code-India (UPC-I), water supply fixture unit (WSFU) and peak water demand of plumbing fixtures, drainage fixture unit (DFU), maximum loads for horizontal fixture branches and building drains or sewers.

2.1	Introduction to Laminar Flow.....	2-1
2.2	Reynolds Experiment.....	2-1
2.2.1	Critical Velocity.....	2-2
2.3	Laminar Flow Through Circular Pipes.....	2-2
2.3.1	Pressure Drop for a Given Length of Pipe or Hagen Poiseuille's Formula.....	2-3
2.4	Flow between Two Parallel Plates.....	2-4
2.4.1	When Plates are Stationary.....	2-4
2.4.2	When One Plate is Fixed and Other is Moving.....	2-5
2.4.3	Derive the Equation of Velocity.....	2-5
2.5	Kinetic Energy Correction and Momentum Correction Factor.....	2-6
2.5.1	Kinetic Energy Correction Factor (α).....	2-6
2.5.2	Momentum Correction Factor (β).....	2-6
2.6	Dash Pot Mechanism.....	2-6
2.7	Solved Examples.....	2-7
2.8	Flow in Porous Media.....	2-20
2.9	High-Rise Building.....	2-21
2.9.1	Need of High Rise Buildings.....	2-21

2.9.2 Three Generations of High-Rise Buildings..... 2-22

2.9.3 Types of High-Rise Buildings..... 2-23

2.9.4 Plumbing System 2-23

2.9.5 Importance of Plumbing Design..... 2-23

2.9.6 Components of plumbing system 2-24

2.9.7 Water Supply fixture Unit (WSFU) 2-24

Unit III

Chapter 3 : Unsteady Flow 3-1 to 3-18

Introduction to flow through sharp crested circular orifice under constant head, types of unsteady flow, flow through openings under varying head, fluid compressibility, celerity of elastic pressure wave through fluid medium. Water hammer phenomenon, rise of pressure due to water hammer, surge tanks and its function.

3.1 Introduction 3-1

3.2 Classification of Orifices..... 3-1

3.3 Flow Through Sharp Crested Circular Orifice Under Constant Head 3-1

3.4 Hydraulic Coefficients 3-2

3.5 Unsteady Fluid Flow 3-3

3.5.1 Types of Unsteady Flow 3-3

3.6 Flow Through Openings Under Varying Head 3-3

3.6.1 Time of Emptying a Hemispherical Tank 3-4

3.6.2 Time of Emptying a Cylindrical Tank Through an Orifice at its Bottom..... 3-4

3.6.3 Discharge from a Tank with Inflow 3-5

3.6.4 Time of Flow from One Vessel to Another 3-6

3.7 Speed of Sound for Adiabatic Process..... 3-7

3.8 Fluid Compressibility 3-7

3.9 Celerity of Elastic Pressure Wave Through Fluid Medium 3-8

3.10 Water Hammer 3-8

3.10.1 Rise of Pressure due to Water Hammer..... 3-9

3.10.2 Gradually Closure of Valve..... 3-9

3.10.3 Sudden Closure of Valve in Elastic Pipe 3-9

3.10.4 Sudden Closure of Valve in Rigid Pipe 3-10

3.11 Velocity of Approach 3-10

3.12 Empirical Formulas for Discharge Over Rectangular Weirs / Notches3-10

3.13 Surge Tank.....3-11

3.13.1 Functions of Surge Tank3-11

3.14 Solved Examples3-11

Unit IV

Chapter 4 : Impact of Free Jets 4-1 to 4-38

Impulse momentum equation, force exerted by jet on stationary and moving flat plate (normal & inclined to the jet), flat plates mounted on periphery of a wheel, force exerted by jet on symmetrical stationary curved vane at centre, on unsymmetrical stationary curved vane tangentially at one of the tips. Force exerted by jet on symmetrical moving curved vane at the centre, symmetrical curved vanes mounted on periphery of a wheel, force exerted by jet on unsymmetrical moving curved vane tangentially at one of the tips, torque exerted on a wheel with radial curved vanes.

4.1 Introduction..... 4-1

4.2 Impulse-Momentum Principle..... 4-1

4.3 Force Due to Impact of Jet On a Flat Fixed Plate.... 4-2

4.3.1 When the Fixed Plate is Normal to Jet 4-2

4.3.2 When Fixed Plate is Inclined at an Angle θ with Jet 4-2

4.4 Force Exerted by a Jet on Stationary Curved Plate or a Vane..... 4-3

4.4.1 When Jet Strikes at the Centre of a Symmetrical Curved Plate..... 4-3

4.4.2 When Jet Strikes an Unsymmetrical Curved Plate at One End Tangentially..... 4-4

4.4.3 For Semicircular Curved Vane or Plate 4-4

4.5 Force Exerted by a Jet on a Hinged Plate..... 4-9

4.5.1 When the Plate is Held Vertical by External Force..... 4-9

4.5.2 Angle Turned by Plate when Holding Force P is not Applied.....4-10

4.6 Force Exerted by Jet on Moving Plates.....4-13

4.6.1 Force On Moving Flat Plate in Direction of Jet.....4-14

4.6.2 Force on Moving Inclined Plate in the Direction of Jet..... 4-15

4.6.3 Impact of Jet on a Series of Flat Moving Plate 4-15

4.7 Impact of Jet on Moving Curved Vanes..... 4-20

4.7.1 Curved Vane Moving in the Direction of Jet..... 4-20

4.7.2 Impact of Jet in case of Series of Moving Vanes in Direction of Jet..... 4-21

4.7.3 Impact of Jet on Unsymmetrical Moving Curved Vane When Jet Strikes on One Tip of Vane Tangentially and Leaves at the Other..... 4-22

4.7.4 Force Exerted on a Series of Moving Radial Curved Vanes..... 4-23

Unit V

Chapter 5 : Hydraulic Turbines 5-1 to 5-82

Elements of hydroelectric power plants, heads and efficiencies and classification of turbines, Pelton wheel turbine : component parts and its working, work done and efficiencies, working proportions, design, multiple jet Pelton wheel (introduction). Francis turbine: component parts and its working, work done and efficiencies, working proportions, design, draft tube theory, cavitation in hydraulic turbines, governing of turbines. Performance of turbine, prediction of performance in terms of unit quantities and specific quantities, specific speed, characteristic curves, model testing of turbines, selection of turbines.

5.1 Introduction 5-1

5.1.1 Classification of Hydraulic Turbines..... 5-1

5.2 General Layout of a Hydro-Electric Power Plant.... 5-2

5.3 Pelton Wheel or Pelton Turbine 5-3

5.3.1 Construction and Working of Pelton Wheel..... 5-3

5.4 Workdone and Efficiency of Pelton Wheel 5-5

5.5 Design Aspects and Important Points to Remember for Pelton Wheel 5-8

5.5.1 Number of Buckets, Z on the Periphery of Pelton Wheel 5-8

5.5.2 Dimensions of Bucket..... 5-9

5.6 Introduction to Governing of Turbines 5-9

5.7 Governor and it's Functions.....5-10

5.8 Requirements of a Good Governor5-10

5.9 Governing System for Turbines of a Hydro-Electric Power Plant.....5-11

5.10 Governing Mechanism5-11

5.11 Governing of Pelton Turbine5-11

5.11.1 Double Regulation Speed in Pelton Turbine.....5-13

5.12 Introduction to Reaction Turbines5-30

5.13 Classification of Reaction Turbines.....5-30

5.14 Constructional Features of Reaction Turbines.....5-31

5.14.1 Scroll Casing.....5-31

5.14.2 Guide Mechanism.....5-32

5.14.3 Runner and Shaft.....5-32

5.14.4 Draft Tube.....5-33

5.15 Comparison between Impulse Turbine and Reaction Turbine.....5-33

5.16 General Layout of a Reaction Turbine Plant.....5-34

5.17 Calculation of Work, Power and Efficiencies of Inward Radial Reaction Turbines5-35

5.17.1 Working Proportions of a Radial Flow Reaction Turbine.....5-36

5.17.2 Degree of Reaction, R.....5-36

5.17.3 Degree of Reaction of Pelton Wheel5-37

5.18 Outward Radial Flow Reaction Turbines5-37

5.19 Comparison Between Inward and Outward Radial Flow Reaction Turbines5-38

5.20 Francis Reaction Turbine.....5-39

5.21 Cavitation in Reaction Turbines5-48

5.21.1 Effects of Cavitation5-49

5.21.2 Methods of Preventing Cavitation5-49

5.21.3 Recent Development to Prevent Cavitation.....5-49

5.21.4 Thoma's Cavitation Factor for Turbines.....5-49

5.22 Governing Mechanism of a Francis Turbine5-52

5.23 Performance of Water Turbines5-52

5.23.1 Introduction.....5-52

5.23.2 Standard Characteristics Curves..... 5-53

5.23.3 Unit Quantities..... 5-53

5.23.3.1 Unit Speed (N_u)..... 5-53

5.23.3.2 Unit Discharge, Q_u 5-54

5.23.3.3 Unit Power, P_u 5-54

5.23.4 Main Characteristics 5-54

5.23.5 Operating Characteristics (Constant Speed Characteristics) 5-56

5.23.6 ISO-Efficiency Curves 5-57

5.24 Specific Speed (N_s) and Shape of Runner 5-58

5.24.1 Derivation of Specific Speed 5-58

5.24.2 Shape of Runners..... 5-58

5.24.3 Specific Speed for Pelton Wheel 5-59

5.24.4 Specific Speed of Francis Turbine..... 5-60

5.24.5 Specific Speed of Kaplan Turbine..... 5-60

5.25 Classification and Selection of Turbine 5-60

5.25.1 Sizes of Hydraulic Turbines..... 5-61

5.26 Dimensionless Parameters and Dimensional Analysis in Turbo Machines 5-67

5.26.1 Dimensional Analysis 5-67

5.27 Dimensions of Some Physical Quantities..... 5-67

5.28 Dimensional Homogeneity 5-68

5.28.1 Applications of Dimensional Homogeneity..... 5-68

5.29 Methods of Dimensional Analysis 5-69

5.30 Rayleigh Method of Dimensional Analysis..... 5-69

5.31 Buckingham Pi (π) Theorem..... 5-70

5.31.1 Selection of Repeating Variables 5-71

5.32 Application of Dimensional Analysis as Applied to Turbo Machines 5-71

5.32.1 Incompressible Fluid Flow Turbo Machines (Hydraulic Turbines and Pumps)..... 5-71

5.32.1.1 Significance of π - Terms 5-72

5.32.2 Scale Effect..... 5-73

5.32.3 Moody's and Other Relationship Considering the Scale Effect..... 5-73

Unit VI

Chapter 6 : Centrifugal Pumps 6-1 to 6-56

Component parts, working, types of centrifugal pumps, work done by impeller, head of pump, losses and efficiencies, minimum starting speed, loss of head due to increased or reduced flow, diameters of impeller and pipes, pumps in series and parallel, suction lift, net positive suction head, cavitations in centrifugal pump, introduction to submersible pumps. Performance centrifugal pump : characteristic curves, specific speed, model testing.

6.1 Introduction..... 6-1

6.2 Classification of Pumps 6-1

6.2.1 Difference between Centrifugal Pump and Inward Flow Hydraulic Turbine 6-2

6.2.2 Pump Applications 6-2

6.2.3 Advantages of Centrifugal Pumps over Reciprocating Pumps 6-2

6.3 Components of a Centrifugal Pump (C.F. Pump) ... 6-2

6.3.1 Working of Centrifugal Pump 6-4

6.3.2 Comparison between Centrifugal and Reciprocating Pump 6-4

6.4 Classification of Centrifugal Pumps 6-5

6.5 Work done by Impeller on Water 6-9

6.6 Various Heads and Efficiencies of a Centrifugal Pump 6-10

6.6.1 Relation between Manometer Head and Workdone by Impeller on Liquid 6-11

6.6.2 Virtual Head, $H_{virtual}$ 6-11

6.6.3 Manometric Head in terms of Suction and Delivery Pressure Measured by Pressure Gauge..... 6-11

6.7 Losses and Efficiencies 6-11

6.7.1 Losses in Pumps..... 6-11

6.7.2 Efficiencies of a Centrifugal Pump 6-12

6.7.3 Specific Speed of Centrifugal Pump, N_s 6-13

6.8 Effect of Vane Discharge Angle ϕ on Manometric Efficiency 6-13

<p>6.9 Minimum Starting Speed of Pump 6-14</p> <p>6.9.1 Minimum Diameter of Impeller, D_1 6-14</p> <p>6.10 Effect of Variation of Discharge on Head Loss and Efficiency 6-29</p> <p>6.11 Effect of Finite Number of Vanes of Impeller on Head and Efficiency 6-30</p> <p>6.12 Working Proportions of Centrifugal Pump 6-30</p> <p>6.13 Effect of Discharge Vane Angle, ϕ (Vane Shapes) 6-31</p> <p>6.14 Multistage Centrifugal Pumps 6-33</p> <p>6.14.1 Multistage Centrifugal Pumps for High Heads 6-33</p> <p>6.14.2 Multistage Centrifugal Pumps for High Discharge 6-34</p> <p>6.15 Performance Characteristics of a Centrifugal Pump 6-35</p> <p>6.15.1 Test Set up for Conduct of Tests on Centrifugal Pump in a Laboratory 6-35</p> <p>6.15.2 Types of Performance Characteristic Curves 6-36</p> <p>6.15.3 Main Characteristic Curves 6-36</p> <p>6.15.4 Operating Characteristic Curves 6-36</p> <p>6.15.5 ISO-efficiency or Maschel Curves 6-37</p>	<p>6.15.6 Constant Head and Constant Discharge Curves 6-37</p> <p>6.16 Selection of Pump Based on System Resistance Curve 6-38</p> <p>6.16.1 Undersized and Oversized Pumps 6-38</p> <p>6.17 Characteristic Curves of Multistage Pumps 6-39</p> <p>6.17.1 Multistage Pumps in Series 6-39</p> <p>6.17.2 Multistage Pumps in Parallel 6-39</p> <p>6.18 Cavitation in Centrifugal Pumps 6-42</p> <p>6.18.1 Estimation of Maximum Permissible Suction Lift (Limited by Cavitation) 6-43</p> <p>6.18.2 Net Positive Suction Head (NPSH) 6-43</p> <p>6.18.3 NPSH (Required) 6-44</p> <p>6.18.4 NPSH (Available) 6-44</p> <p>6.18.5 Thoma's Cavitation Factor 6-44</p> <p>6.18.6 Suction Specific Speed (NSS) 6-44</p> <p>6.19 Priming of a Centrifugal Pump 6-45</p> <p>6.19.1 Methods of Priming 6-45</p> <p>6.20 Submersible Pump 6-46</p> <p>6.21 Similarity Relations for Model Testing 6-49</p> <p>6.21.1 Ackeret Relationship for Pumps 6-49</p>
