

**Module I****Chapter 1 : Introduction To Finite Element Analysis****1-1 to 1-38**

1.1	Introduction to Finite Element Method.....	1-2
1.2	Brief History of FEM	1-2
1.3	Relationships to be Used in Finite Element Analysis	1-3
1.3.1	Strain - Displacement Relationship	1-3
1.3.2	Stress - Strain Relationship	1-4
1.3.3	Stress - Strain Relationship for One-Dimensional Problems	1-6
1.4	General Procedure of Finite Element Analysis.....	1-6
1.4.1	Problem Solving by Finite Element Analysis	1-9
1.5	Advantages and Limitations of Finite Element Method.....	1-9
1.5.1	Advantages of Finite Element Method	1-9
1.5.2	Disadvantages (Limitations) of Finite Element Method	1-10
1.6	Applications of Finite Element Method.....	1-10
1.7	Mathematical Modelling.....	1-10
1.7.1	Mathematical Modelling	1-10
1.7.2	Practical Example of Mathematical Modeling	1-10
1.7.3	Governing Differential Equations in Different Fields ..	1-12
1.8	Approximate Solution of Differential Equations (Different Numerical Methods).....	1-12
1.9	Weighted Residual Methods.....	1-12
1.9.1	Galerkin Method	1-12
1.9.2	Collection Method	1-22
1.9.3	Least Square Method	1-23
1.10	Weak Formulation	1-27
1.10.1	Limitations of Strong Formulation of Weighted Residual Method	1-27
1.10.2	Advantages of Weak Formulation	1-27
1.10.3	Procedure for Weak Formulation	1-28
1.10.4	Advantage of Weak Formulation	1-29
1.10.5	Limitation of Weak Formulation	1-29
1.10.6	Difference Between Strong Formulation of Weighted Residual Method and Weak Formulation	1-29
1.11	Rayleigh-Ritz Method	1-29
1.12	Finite Difference Method.....	1-34
1.13	Finite Element Method.....	1-35
1.13.1	Difference between Finite Element Method and Finite Difference Method	1-35
1.14	Solution Methodologies for Engineering Problems.....	1-36
1.15	Boundary Conditions	1-37

1.15.1	Boundary Conditions	1-37
1.15.2	Types of Boundary Conditions	1-37
1.15.3	Solution to Differential Equation	1-38
1.15.4	Symmetric Boundary Conditions	1-38

Module II**Chapter 2 : Finite Element Analysis Procedure****2-1 to 2-15**

2.1	Discrete and Continuous Models	2-2
2.2	Weighted Residual Methods.....	2-2
2.3	Rayleigh-Ritz Method	2-2
2.4	Basic Concepts of Finite Element Method	2-2
2.5	Terminology Used in Finite Element Analysis	2-3
2.5.1	Domain or Continuum	2-3
2.5.2	Elements	2-3
2.5.3	Nodes	2-4
2.5.4	Constraints	2-4
2.5.5	Loads	2-4
2.5.6	Degrees of Freedom (D.O.F)	2-4
2.5.7	Discretization (Meshing)	2-4
2.5.8	Order of Element	2-5
2.5.9	External and Internal Nodes	2-5
2.5.10	Primary and Secondary Variables	2-6
2.6	Boundary Conditions	2-6
2.6.1	Boundary Conditions	2-6
2.6.2	Types of Boundary Conditions	2-7
2.6.3	Solution to Differential Equation	2-7
2.6.4	Symmetric Boundary Conditions	2-7
2.7	Principal of Minimum Potential Energy	2-8
2.7.1	Element Stiffness Matrix	2-11
2.7.2	Element Load Vector	2-11
2.8	Global, Local and Natural Co-Ordinate Systems Used in FEA.....	2-13

Module III**Chapter 3 : One-Dimensional Analysis : Structural****Problems****3-1 to 3-165**

3.1	Types of 1D Elements	3-2
3.1.1	Displacement Function for 1D Elements	3-2
3.2	Natural Co-Ordinates of Two Noded 1D Elements.....	3-3
3.3	Shape Functions of Two Noded 1D Element	3-4
3.3.1	Shape Functions of Two Noded 1D Element	3-4
3.3.2	Property at Any Point Within Element	3-5
3.3.3	Properties of Shape Functions	3-6
3.4	Finite Element Formulation of One-Dimensional Body (Bar Elements)	3-9

<p>3.4.1 Formulation of Element Load Vector3-9</p> <p>3.4.2 Formulation of Global Load Vector for Body3-11</p> <p>3.4.3 Formulation of Global Nodal Displacement Vector for Body3-11</p> <p>3.4.4 Node Numbering and Element Connectivity3-12</p> <p>3.4.5 Formulation of Element Stiffness Matrix by Direct Stiffness Method3-13</p> <p>3.4.6 Formulation of Global Stiffness Matrix for Body3-14</p> <p>3.4.7 Formulation of Global Force-Nodal Displacement Relationship for Body (Direct Stiffness Method)3-14</p> <p>3.4.8 Methods of Solving Force - Stiffness - Nodal Displacement Equations (Treatment of Specified Boundary Conditions)3-20</p> <p>3.4.9 Formulation of Element Strain - Nodal Displacement Relationship3-23</p> <p>3.4.10 Formulation of Element Stress - Nodal Displacement Relationship3-24</p> <p>3.5 Temperature Effects3-85</p> <p>3.6 Formulation of Two-Dimensional Trusses3-93</p> <p>3.7 Coordinate Systems and Transformation Matrix For Truss Elements.....3-94</p> <p>3.7.1 Relation Between Local Coordinates and Global Coordinates for Truss Elements3-95</p> <p>3.7.2 Relation between Local Nodal Displacement and Global Nodal Displacement for Truss3-96</p> <p>3.7.3 Relation between Local Load Vector and Global Load Vector3-96</p> <p>3.8 Element Stiffness Matrix for Truss Elements in Global Coordinate System3-96</p> <p>3.9 Element Stress for Truss Elements.....3-98</p> <p>3.10 Finite Element Formulation of Beam Elements3-141</p> <p>3.11 Methods of Storage for Global Stiffness Matrix.....3-162</p> <p>3.11.1 Global Stiffness Matrix3-162</p> <p>3.11.2 Methods of Storage for Global Stiffness Matrix in Computer Memory3-163</p> <p>3.11.3 Banded Form of Matrix (Half Bandwidth)3-163</p> <p>3.11.4 Skyline Form3-164</p>	<p>4.2.3 Examples of Boundary Conditions in 1-D Heat Conduction4-5</p> <p>4.2.4 Convection Heat Loss4-6</p> <p>4.2.5 Governing Differential Equation for 1D Steady-State Heat Transfer Problem, With Conduction and Convection4-6</p> <p>4.3 Natural Coordinates And Shape Functions for Two Noded One-Dimensional Element.....4-7</p> <p>4.3.1 Relationship Between Local and Natural Coordinates4-7</p> <p>4.3.2 Shape Functions4-7</p> <p>4.3.3 Temperature at any Point Within Element4-9</p> <p>4.4 Formulation of Element Thermal Stiffness Matrix for 1D Steady-State Heat Transfer Problems.....4-9</p> <p>4.4.1 Summary of Governing Equation and Element Stiffness Equation for Steady State Heat Transfer4-12</p> <p>4.5 Formulation of Element Thermal Stiffness Matrix for 1D Steady-State Heat Transfer Problems With Conduction And Convection (FINS).....4-35</p> <p>4.5.1 Summary of Governing Equation and Element Stiffness Equation for Heat Transfer Through Fins ..4-40</p> <p>4.6 Basic Steps in Solving 1D Heat Transfer Problems Using Finite Element Analysis4-56</p> <p>4.7 Governing Differential Equation for 1D Fluid Flow.....4-57</p> <p>4.7.1 Velocity of Fluid Flow.....4-57</p> <p>4.7.2 Governing Differential Equation for 1-D Fluid Flow ...4-57</p> <p>4.8 Natural Coordinates and Shape Functions for Two Noded One-Dimensional Fluid Element.....4-59</p> <p>4.8.1 Relationship Between Local and Natural Coordinates4-59</p> <p>4.8.2 Shape Functions4-59</p> <p>4.8.3 Fluid Head at Any Point within Element4-61</p> <p>4.9 Formulation of Element Thermal Stiffness Matrix For 1D Fluid Flow Problems4-61</p> <p>4.9.1 Summary of Governing Equation and Element Stiffness Equation for 1D Fluid Flow4-65</p>
---	--

Module IV

Chapter 4 : One-Dimensional Analysis : Heat Transfer and Fluid Flow Problems 4-1 to 4-70

<p>4.1 Introduction.....4-2</p> <p>4.2 Governing Differential Equation for 1D Steady-State Heat Transfer Problems.....4-3</p> <p>4.2.1 Types of Boundary Conditions for 1-D Steady-State Heat Transfer Problem4-5</p> <p>4.2.2 Forced and Natural Boundary Conditions4-5</p>
--

Chapter 5 : Two-Dimensional Finite Element Formulations 5-1 to 5-54

<p>5.1 Types of Two-Dimensional and Three-Dimensional Elements5-2</p> <p>5.2 Constant Strain Triangular (CST) Elements.....5-4</p> <p>5.2.1 Local and Natural Coordinates for CST Element5-5</p> <p>5.2.2 Shape Functions for CST Element5-6</p>
--

5.2.3	Local Coordinates of Point in terms of Nodal Coordinates for CST Element	5-7
5.2.4	Local Coordinates of Point in Terms of Natural Coordinates for CST Element	5-7
5.2.5	Displacement of Point in Terms of Nodal Displacements for CST Element	5-8
5.3	Linear Strain Rectangular (LSR) Element	5-17
5.3.1	Local and Natural Coordinates for LSR Element	5-18
5.3.2	Shape Functions for LSR Element	5-19
5.3.3	Local Coordinates of Points in Terms of Nodal Coordinates for LSR Element	5-21
5.3.4	Local Coordinates of Points in Terms of Natural Coordinates for LSR Element	5-21
5.3.5	Displacement of Point in Terms of Nodal Displacement for LSR Element	5-21
5.4	Concept of Isoparametric Elements	5-27
5.4.1	Difficulties with Straight Sided Elements	5-27
5.4.2	Use of Isoparametric Elements	5-28
5.4.3	Isoparametric Elements	5-28
5.4.4	Geometric and Field Variables in Isoparametric Elements	5-29
5.5	Isoparametric, Subparametric and Superparametric Elements	5-30
5.6	Local And Natural Coordinates	5-31
5.7	Approaches (Methods) of Isoparametric Formulation of Shape Functions	5-31
5.7.1	Basic Laws (Theorems) of Isoparametric Formulation	5-32
5.7.2	Different Types of Isoparametric Elements	5-32
5.8	Lagrange's Interpolation Formula	5-33
5.8.1	Isoparametric Formulation of Shape Functions by Lagrange's Interpolation Formula	5-34
5.9	Serendipity Approach	5-40
5.10	Convergence Requirements in Finite Element Methods.....	5-46
5.10.1	Significance of Convergence in FEM	5-46
5.10.2	Convergence Conditions (Convergence Criteria)	5-46
5.11	Pascal's Triangle	5-47
5.12	Conditions for Polynomial Functions of Elements	5-48
5.12.1	Geometric Isotropy	5-48
5.12.2	Completeness Requirement	5-49
5.12.3	Inter-Element Compatibility Requirement	5-49
5.12.4	C_0 and C_1 Type Continuity	5-50
5.13	Mesh Refinement and Automatic Update.....	5-50
5.13.1	Methods of Mesh Refinement	5-50
5.13.2	Adaptive meshing and Geometry Associative Mesh	5-51

5.14	Quality Checks	5-51
5.14.1	Element Quality Parameters	5-51
5.14.2	Patch Test	5-54

Module V

Chapter 6 : Two - Dimensional Vector

Variable Problems

6-1 to 6-47

6.1	Two-Dimensional Stress Analysis.....	6-2
6.1.1	Plane Stress Problems :	6-2
6.1.2	Plane Strain Problems.....	6-3
6.1.3	Axisymmetric Problems :	6-3
6.2	Constant Strain Triangular (CST) Elements.....	6-4
6.2.1	Local and Natural Coordinates for CST Element :	6-4
6.2.2	Shape Functions for CST Element :	6-5
6.2.3	Local Coordinates of Point in terms of Nodal Coordinates for CST Element :	6-6
6.2.4	Local Coordinates of Point in Terms of Natural Coordinates for CST Element :	6-6
6.2.5	Displacement of Point in Terms of Nodal Displacements for CST Element :	6-6
6.3	finite element formulation of two-dimensional body with cst elements	6-6
6.3.1	Jacobian Matrix for CST Element :	6-7
6.3.2	Area Coordinates for Triangular Elements :	6-8
6.3.3	Formulation of Element Strain-Nodal Displacement Relationship :	6-8
6.3.4	Formulation of Element Stress-Nodal Displacement Relationship For CST Element :	6-10
6.3.5	Formulation of Element Stiffness Matrix and Load Vector for CST Element :	6-10
6.3.6	Formulation of Element Load Vector :	6-13
6.4	Jacobian Matrix For Four-Nodal Quadrilateral Element.....	6-41

Module VI

Chapter 7 : Finite Element Formulation of Dynamics

and Numerical Techniques

7-1 to 7-62

7.1	Types of Dynamic Analysis.....	7-2
7.2	General Dynamic Equation of Motion	7-3
7.3	Lumped and Consistent Mass	7-3
7.3.1	Difference Between Lumped Mass System and Consistent Mass system	7-4
7.4	Finite Element Formulation for Longitudinal Undamped Free Vibration of Bar Element	7-5
7.4.1	Longitudinal Undamped Free Vibration of Bar Element using Lumped Mass Matrix	7-5

7.4.2	Longitudinal Undamped Free Vibration of Bar Element Using Consistent Mass Matrix7-7	7.8	Summary of Lumped and Consistent Mass Matrices7-13
7.5	Finite Element Formulation for Undamped Free Vibration of Beam Element.....7-10	7.9	Formulation of Undamped Free Vibration By Eigenvalue Method.....7-14
7.6	Finite Element Formulation for Undamped Free Vibration of 2D Plane Truss Element.....7-12	7.9.1	Evaluation of Eigenvalues and Eigenvectors7-14
7.7	Finite Element Formulation For Undamped Free Vibration of 2D-CST Element7-12	7.9.2	Example of Eigenvalue and Eigenvector Problem7-15
