

Article A : Pre-requisites A-1 to A-12

Syllabus : Signals, Fourier Series and Fourier Transform, Power and Energy Theorems, Spectral Density Functions, Correlation of Energy Signals, Random Variables, Statistical Averages, Probability Models.

A.1	Signals	A-2
A.1.1	Average Normalized Power	A-2
A.1.2	Energy	A-3
A.1.3	Energy and Power Signals	A-3
A.2	Fourier Series and Fourier Transform	A-3
A.2.1	Fourier Series	A-3
A.2.2	Exponential Fourier Series	A-3
A.2.3	Fourier Transform	A-4
A.2.4	Inverse Fourier Transform	A-4
A.2.5	Properties of Fourier Transform	A-4
A.2.6	F. T. of Periodic Signals	A-6
A.2.7	F. T. of Standard Signals	A-6
A.3	Power and Energy Theorems	A-7
A.3.1	Parseval's Power Theorem	A-7
A.3.2	Rayleigh's Energy Theorem	A-7
A.4	Spectral Density Functions	A-7
A.4.1	Energy Spectral Density (ESD)	A-7
A.4.2	Power Spectral Density (PSD)	A-7
A.5	Correlation of Energy Signals	A-8
A.5.1	Auto-Correlation Function for the Energy Signals	A-8
A.5.2	Cross-Correlation of Energy Signals	A-8
A.5.3	Auto-Correlation Function of Power Signals	A-8
A.5.4	Cross-Correlation of Power Signals	A-9
A.6	Random Variables	A-9
A.6.1	Cumulative Distribution Function (CDF)	A-9
A.6.2	Probability Density Function (PDF)	A-9
A.7	Statistical Averages	A-9
A.8	Probability Models	A-10
A.8.1	Gaussian (Normal) Distribution	A-10
A.8.2	Uniform Distribution	A-11
A.8.3	Error Function	A-11
A.8.4	Complementary Error Function	A-12

Module 1

Chapter 1 : Introduction 1-1 to 1-10

Syllabus : Block diagram of digital communication system.

1.1	Introduction	1-2
1.2	Sources and Signals	1-2
1.2.1	Analog to Digital Conversion	1-2
1.2.2	Graphical Representation of A/D Conversion Process	1-2
1.3	Digital Communication System (DCS)	1-3
1.4	Why Digital Communication?	1-5
1.4.1	Advantages of Digital Communication	1-7
1.4.2	Disadvantages	1-7
1.5	Digital Communication Nomenclature	1-8
1.6	Digital Versus Analog Performance Criteria	1-9
1.6.1	Comparison of Analog and Digital Modulation	1-9
•	Review Questions	1-10

Module 1

Chapter 2 : Information Theory and Source Codes 2-1 to 2-42

Syllabus : Information content of a source symbol, Source entropy, Average information rate, AWGN channel, and Shannon-Hartley channel capacity theorem. Introduction of source code, Huffman code, Shannon-Fano code.

2.1	Introduction to Information Theory	2-2
2.1.1	Uncertainty and Information	2-2
2.2	Information	2-3
2.2.1	Properties of Information.....	2-3
2.3	Types of Sources and their Models	2-5
2.3.1	Analog Information Sources	2-5
2.3.2	Discrete Information Sources	2-5
2.4	Average Information or Entropy	2-5
2.4.1	Expression for Entropy	2-5
2.4.2	Properties of Entropy	2-6
2.4.3	Entropy of a Binary Memoryless Source ...	2-7
2.5	Information Rate (R)	2-8
2.6	Channels for Digital Communications	2-13
2.6.1	AWGN Channel	2-13
2.7	Shannon's Source Coding Theorem	2-13

2.7.1	Shannon-Fano Code	2-14
2.7.2	Shannon - Fano Algorithm	2-15
2.7.3	Huffman Coding	2-19
2.7.5	Comparison of Shannon Fano and Huffman Coding	2-26
2.7.6	Lempel ZIV Coding	2-29
2.8	Types of Channels and Their Models	2-32
2.8.1	Binary Symmetric Channel	2-32
2.8.2	Discrete Memoryless Channels (DMC) ...	2-33
2.9	Channel Capacity	2-33
2.10	Channel Coding Theorem	2-33
2.11	Shannon Hartley Channel Capacity Theorem	2-36
2.11.1	Trade-off between B.W. and SNR	2-37
	• Review Questions.....	2-41

Module 2**Chapter 3 : Error Control Systems 3-1 to 3-20**

Syllabus : Introduction of error control system, Automatic Retransmission Query (ARQ) system, Types of ARQ systems and comparison, Forward error correction (FEC) system. Comparison between FEC and ARQ. Error detection codes : Vertical Redundancy Check (VRC) code, Longitudinal Redundancy Check (LRC) code, Cyclic Redundancy Check (CRC) code and Checksum code.

3.1	Introduction	3-2
3.1.1	Error Control Coding	3-2
3.1.2	Error Control Techniques	3-2
3.1.3	Types of Errors	3-3
3.1.4	Encoding and Decoding	3-3
3.1.5	Redundancy	3-3
3.2	Definitions Related to Codes	3-4
3.2.1	Code Word	3-4
3.2.2	Code Rate	3-4
3.2.3	Hamming Weight $w(x)$	3-4
3.2.4	Code Efficiency	3-4
3.2.5	Hamming Distance	3-4
3.2.6	Minimum Distance d_{min}	3-5
3.3	Error Detection Techniques	3-5
3.3.1	Parity Checking	3-6
3.3.2	Two Dimensional Parity Check (Block Parity)	3-7
3.3.3	Checksum Error Detection	3-8

3.4	Cyclic Redundancy Check (CRC)	3-9
3.4.1	CRC Encoder and Decoder	3-10
3.4.2	Procedure to Obtain CRC	3-10
3.4.3	Requirements of CRC	3-10
3.4.4	CRC Generator	3-10
3.4.5	CRC Checker	3-11
3.5	Error Correction Techniques.....	3-14
3.5.1	FEC (Forward Error Correction)	3-14
3.6	ARQ Techniques	3-15
3.6.1	Basic ARQ system	3-15
3.6.2	Advantages of ARQ	3-16
3.6.3	Disadvantages of ARQ	3-16
3.6.4	Applications	3-16
3.7	Types of ARQ system	3-16
3.7.1	Stop and Wait ARQ System	3-16
3.7.2	GO-Back-n ARQ System	3-17
3.7.3	Selective Repeat ARQ	3-17
3.7.4	Comparison of ARQ Systems	3-18
3.7.5	Comparison of FEC and ARQ	3-19
	• Review Questions	3-19

Module 3**Chapter 4 : Linear Block Codes 4-1 to 4-36**

Syllabus : **Linear block code** : Code generation, Calculation of minimum Hamming distance, Error detection capability, error correction capability, Implementation of encoder, Error detection, Syndrome table, Error correction and implementation of decoder.

4.1	Classification of Error-correcting Codes	4-2
4.1.1	Linear Codes	4-2
4.1.2	Non-Linear Codes	4-2
4.1.3	Classification Based on the Functioning ..	4-2
4.2	Linear Block Codes.....	4-3
4.2.1	Generation of block code (LBC)	4-3
4.2.2	Code Word Structure of LBC.....	4-3
4.2.3	Matrix Representation of LBC	4-3
4.2.4	Generator Matrix of LBC	4-4
4.2.5	Generation of Code Words Using Generator Matrix	4-4
4.2.6	Systematic Form of Generator Matrix	4-6
4.2.7	Systematic Code Word	4-6

4.3	Decoding of a Linear Block Code	4-6	5.5.3	Systematic Form of Generator Matrix	5-9
4.3.1	Error Detection Capability	4-6	5.6	Parity Check Matrix	5-9
4.3.2	Error Correcting Capability	4-7	5.7	Comparison of Systematic and Non-systematic Cyclic Codes	5-10
4.4	Encoder Implementation	4-8	5.8	Syndrome Decoding of Cyclic Codes	5-11
4.5	Parity Check Matrix of Block Codes	4-9	5.8.1	Syndrome Polynomial	5-11
4.5.1	Error Detection using Parity Check Matrix	4-9	5.8.2	Syndrome Decoding	5-11
4.5.2	Relation between H and d_{min}	4-10	5.9	Advantages and Disadvantages of Cyclic Codes ..	5-13
4.6	Decoding LBC using Parity Check Matrix	4-14	5.9.1	Advantages of Cyclic Codes	5-13
4.6.1	Shannon's Limit	4-15	5.9.2	Disadvantages of Cyclic Codes	5-13
4.7	Syndrome Decoding	4-15	5.10	Circuit Implementation of Cyclic Codes	5-13
4.7.1	Error Vector (E)	4-15	5.10.1	The Circuit Elements used in Encoder or Decoder	5-14
4.7.2	Syndrome Vector (S).....	4-16	5.10.2	Encoder for the Cyclic Codes	5-14
4.7.3	Procedure for Syndrome Decoding	4-16	5.10.3	Drawing the Encoder Circuit	5-15
4.8	Syndrome Generator	4-34	5.11	Non-algebraic Decoding of Cyclic Codes	5-27
4.9	Generalised Decoder of LBC	4-34	5.11.1	Syndrome Calculator for the Systematic Cyclic Codes	5-28
4.10	Hamming Codes	4-35		• Review Questions	5-37
4.10.1	Error Detection and Correction Capabilities of Hamming Code	4-35			
	• Review Questions.....	4-36			

Module 3

Module 3

Chapter 5 : Cyclic Codes 5-1 to 5-38

Syllabus : Cyclic code : Code generation, Calculation of minimum Hamming distance, Error detection capability, Error correction capability, Implementation of encoder, Error detection, Syndrome table, Error correction and implementation of decoder.

5.1	Introduction to Cyclic Codes	5-2
5.1.1	Definition of Cyclic Code	5-2
5.2	Polynomial Representation of Cyclic Codes	5-3
5.3	Generating the Cyclic Codes	5-3
5.3.1	Generator Polynomial	5-3
5.3.2	Generation of Non-systematic Code Words	5-4
5.4	Systematic Cyclic Codes	5-6
5.4.1	Generation of Systematic Code words	5-6
5.5	Matrix Description of Cyclic Codes	5-7
5.5.1	Generator Matrices of the Cyclic Codes ...	5-8
5.5.2	Use of Generator Matrix to Obtain the Code words	5-8

Chapter 6 : Convolutional Codes 6-1 to 6-46

Syllabus : Convolutional code : Generation, Path responses, Encoder, State transition table, State diagram, Tree diagram, Trellis diagram, Decoding using Viterbi's algorithm.

6.1	Introduction to Convolutional Codes	6-2
6.1.1	Tree Codes and Convolutional Codes	6-2
6.1.2	Convolutional Encoder	6-2
6.1.3	Word length (k)	6-3
6.1.4	Block length (n)	6-3
6.1.5	Simplified Convolutional Encoder	6-3
6.2	Graphical Representation for Convolutional Encoding	6-5
6.2.1	State Diagram	6-5
6.2.2	Trellis Diagram	6-5
6.2.3	Encoding using the Trellis Diagram	6-6
6.3	Mathematical Representation of Encoding	6-7
6.3.1	Practical Convolutional Encoder	6-7
6.3.2	Definitions For Convolutional Codes	6-8

6.3.3	Time Domain Approach (Impulse Response of Encoder)	6-8	7.3.6	Polar NRZ Line Code	7-7
6.3.4	Transform - Domain Approach (Polynomial Description of Convolutional Codes)	6-10	7.3.7	Bipolar NRZ Format	7-7
6.3.5	Graphical Representation	6-13	7.3.8	Split Phase Manchester Format	7-8
6.3.6	The Code Tree	6-13	7.3.9	Polar Quaternary NRZ Format	7-8
6.3.7	Code Trellis	6-14	7.4	Power Spectra of Line Codes.....	7-9
6.3.8	State Diagram	6-14	7.4.1	Data signalling rate	7-9
6.3.9	Parity Check Matrix	6-17	7.4.2	Modulation Rate	7-9
6.3.10	Syndrome Polynomial Vector	6-17	7.4.3	Power Spectra	7-10
6.3.11	Systematic Encoder	6-17	7.4.4	PSD of NRZ Unipolar Format	7-10
6.4	Decoding Methods of Convolutional Codes	6-35	7.4.5	PSD of NRZ Polar Format	7-11
6.4.1	Viterbi Decoding	6-35	7.4.6	PSD of NRZ Bipolar Format	7-11
6.4.2	Hard-Decision Viterbi Decoding	6-35	7.4.7	PSD of the Manchester Format	7-12
6.4.3	Metric Diversion Effect	6-38	7.5	Comparison of Line Codes Base on Power Spectra	7-13
6.4.4	Decoding Window	6-38	7.5.1	Comparison of Line Codes	7-14
6.4.5	Soft Decision Viterbi Decoding	6-38	7.5.2	Difference between Channel Coding and Line Coding	7-18
6.4.6	Sequential Decoding	6-44	7.5.3	Synchronization	7-18
6.4.7	Comparison of Convolutional Codes and Block Codes	6-45	7.6	Pulse Transmission through a Band limited Channel	7-19
	• Review Questions.....	6-45	7.7	Inter-symbol Interference (ISI)	7-19

Module 4

Chapter 7 : Baseband Transmission 7-1 to 7-30

Syllabus : Block diagram of baseband transmitter-receiver system, Line codes (RZ and NRZ UniPolar formats, RZ and NRZ Polar formats, NRZ Bipolar format (AMI format), NRZ Manchester format, and Quaternary Polar format). Comparison of line codes with respect to bandwidth, power requirement, synchronization capability, DC level, polarity inversion error and complexity. Power spectral density and spectrum of NRZ Unipolar and Polar formats.

Inter Symbol Interference (ISI), Inter Channel Interference (ICI). Nyquist criterion for distortionless baseband binary transmission, Nyquist bandwidth and practical bandwidth.

7.1	Introduction	7-2	7.8	Nyquist Criterion for Distortionless Baseband Binary Transmission	7-22
7.2	Baseband System	7-2	7.8.1	Ideal Solution	7-23
7.3	Line Coding	7-2	7.8.2	Raised Cosine Spectrum	7-24
7.3.1	Classification of Line Codes	7-3	7.9	Eye Diagram	7-25
7.3.2	Properties of Line Codes	7-5	7.10	Equalization	7-27
7.3.3	Unipolar RZ Line Code	7-5	7.10.1	Tapped Delay Line Filter	7-28
7.3.4	Unipolar NRZ Format	7-6	7.10.2	Decision Feedback Equalizer	7-28
7.3.5	Polar RZ Line Code	7-6	7.11	University Questions and Answers	7-30
	• Review Questions	7-29			

Module 5

Chapter 8 : Optimum Detection of Baseband Signals 8-1 to 8-36

Syllabus : Matched filter, Output SNR, Transfer function, Impulse response and Error probability. Integrate and dump receiver, Correlator receiver.

8.1	Introduction	8-2	8.9.1	Probability of Error for an Optimum Filter.....	8-21
8.1.1	White Gaussian Noise	8-2	8.9.2	Optimum Filter Transfer Function $H(f)$	8-22
8.2	Probability of Error (P_e)	8-3	8.10	Matched Filter	8-25
8.2.1	Detection and Estimation	8-3	8.10.1	Impulse Response of a Matched Filter ...	8-25
8.2.2	Digital Communication System	8-3	8.10.2	Probability of Error the Matched Filter ...	8-26
8.3	Vector Space Representation of Signals	8-4	8.10.3	Signal to Noise Ratio of a Matched Filter	8-27
8.3.1	Unit Vectors	8-4	8.10.4	Properties of Matched Filter	8-27
8.3.2	Representation of a Vector	8-4	8.11	Coherent Reception (Correlation)	8-31
8.3.3	Scalar Product of Vectors	8-4	8.11.1	Correlator Realization of a Matched Filter	8-32
8.3.4	Independent Vectors	8-4	8.11.2	Comparison of Matched Filter and Correlator	8-33
8.3.5	Basis Vectors	8-5	8.12	Maximum-Likelihood Receiver	8-34
8.4	Signal as a Vector	8-5	8.13	Correlator Receiver.....	8-34
8.4.1	Concept of Signal Space	8-5	8.14	Gram-Schmidt procedure.....	8-35
8.4.2	Vectors of Orthogonal Signals	8-6		• Review Questions	8-36
8.5	Geometric Representation of Signals.....	8-6	Module 6		
8.5.1	Signal Space Representation	8-7	Chapter 9 : Digital Modulation 9-1 to 9-56		
8.5.2	N-dimensional Signal Space	8-7	Syllabus : Generation, Detection, Error probability (using signal space representation and Euclidean distance), Bandwidth (using PSD and spectrum except for MSK) and applications of the following modulations: Binary ASK, Binary PSK, Quadrature PSK, Off-Set QPSK, M-ary PSK, Binary FSK, M-ary FSK, 16-ary QASK and MSK.		
8.5.3	Detection of Known Signals in Noise	8-8	9.1	Introduction	9-2
8.6	Coherent Detection of Binary Signals in Presence of Noise	8-9	9.1.1	Hierarchy of Digital Modulation Techniques.....	9-2
8.6.1	Gaussian Noise and its PDF	8-9	9.1.2	Probability of Error (P_e)	9-2
8.6.2	Variance and Standard Deviation	8-9	9.1.3	Power Spectra	9-2
8.6.3	Mathematical Representation of a Gaussian PDF	8-9	9.1.4	Bandwidth Efficiency	9-2
8.6.4	How to use the PDF Curves ?.....	8-9	9.2	Passband Transmission Model	9-3
8.6.5	Effect of Gaussian Noise on Bipolar Signals	8-10	9.3	Digital to Analog Conversion	9-3
8.6.6	To Determine the Error Rate of Pulse System	8-10	9.3.1	Need of Digital Modulation	9-4
8.6.7	Error Probability	8-10	9.3.2	Types of Digital Carrier Modulation.....	9-4
8.6.8	Maximum Likelihood Detector	8-11	9.3.3	Analogy with Analog Schemes.....	9-5
8.7	Effect of Noise on Signal	8-12	9.4	Classification of Digital Modulation	9-5
8.7.1	Requirements of a Detection Technique	8-12	9.5	Binary and M-ary Transmission	9-5
8.7.2	Detection Theory	8-12	9.5.1	Binary transmission	9-5
8.7.3	Detection Techniques	8-13			
8.8	Integrate and Dump Receiver (Filter)	8-13			
8.8.1	Signal to Noise Ratio of Integrate and Dump Receiver (Filter)	8-14			
8.8.2	Probability of Error for Integrate and Dump Receiver	8-16			
8.9	The Optimum Receiver	8-20			

9.5.2	M-ary Transmission.....	9-5	9.11.2	Mathematical Representation of QPSK ..	9-20
9.6	Binary Amplitude Shift Keying (BASK)	9-5	9.11.3	Symbol Transmission Rate	9-20
9.6.1	Frequency Spectrum of BASK	9-6	9.11.4	Constellation Diagram of QPSK	9-21
9.6.2	Bandwidth of BASK Signal	9-6	9.11.5	Offset QPSK (OQPSK) Transmitter	9-21
9.6.3	Coherent Detection of BASK	9-6	9.11.6	Non-offset QPSK Transmitter	9-23
9.6.4	Noncoherent Detection of ASK	9-7	9.11.7	The QPSK Receiver	9-24
9.6.5	Error Probability of ASK	9-7	9.11.8	Signal Space Representation of QPSK	9-25
9.6.6	Constellation Diagram	9-8	9.11.9	Conclusions (Euclidian Distance d)	9-26
9.6.7	Constellation Diagram of ASK	9-9	9.11.10	Spectrum of QPSK	9-26
9.6.8	Merits and Demerits of ASK	9-9	9.11.11	Bandwidth of QPSK	9-27
9.7	Phase Shift Keying (PSK)	9-9	9.11.12	Error Probability for QPSK System	9-28
9.8	Binary Phase Shift Keying (BPSK)	9-9	9.11.13	Advantages of QPSK	9-29
9.8.1	BPSK Generation	9-10	9.11.14	Disadvantage	9-29
9.8.2	Mathematical Representation of BPSK	9-10	9.11.15	Applications	9-29
9.8.3	BPSK Coherent Receiver	9-10	9.11.16	QPSK is Better than PSK	9-29
9.8.4	Spectrum of BPSK	9-11	9.11.17	Comparison of BPSK and QPSK	9-30
9.8.5	Bandwidth of BPSK	9-12	9.11.18	Difference between OQPSK and QPSK	9-30
9.8.6	Geometrical Representation of BPSK	9-12	9.12	M-ary PSK	9-31
9.8.7	Euclidian Distance (D)	9-12	9.12.1	Euclidian Distance (d)	9-32
9.8.8	Error Probability of BPSK (with Coherent Detection)	9-13	9.12.2	8- PSK System	9-32
9.8.9	Constellation Diagram of BPSK	9-14	9.12.3	PSD and Bandwidth of M-ary PSK	9-32
9.8.10	Advantages of BPSK	9-14	9.12.4	M-ary PSK Transmitter	9-33
9.8.11	Disadvantage of BPSK	9-14	9.12.5	M-ary PSK Receiver	9-34
9.8.12	Applications	9-14	9.12.6	Advantages of M-ary PSK	9-35
9.9	Binary Frequency Shift Keying (FSK).....	9-14	9.12.7	Disadvantages of M-ary PSK	9-35
9.9.1	Mathematical Representation of BFSK ..	9-15	9.12.8	Probability of Symbol Error for MPSK	9-36
9.9.2	Generation of BFSK	9-15	9.13	Quadrature Amplitude Shift Keying (QASK) or QAM	9-37
9.9.3	Spectrum of BFSK	9-15	9.13.1	Geometrical Representation of QASK	9-37
9.9.4	Bandwidth of BFSK	9-16	9.13.2	Types of QAM	9-38
9.9.5	BFSK Receiver (Coherent Receiver)	9-16	9.13.3	4 QAM and 8 QAM Systems	9-38
9.9.6	Noncoherent BFSK Receiver	9-17	9.13.4	QASK Transmitter	9-39
9.9.7	Geometric Representation of Orthogonal BFSK	9-17	9.13.5	QASK Receiver	9-40
9.9.8	Advantages of BFSK	9-18	9.13.6	PSD and Bandwidth of QASK System	9-41
9.9.9	Disadvantages of BFSK	9-18	9.13.7	Error Probability of 16 QAM	9-41
9.9.10	Applications of BFSK	9-18	9.13.8	Comparison of QASK and QPSK	9-41
9.10	Comparison of BASK, BFSK, BPSK	9-19	9.13.9	Comparison of 16 PSK with 16 QASK	9-42
9.11	Quadrature PSK (QPSK)	9-19	9.14	M-ary FSK System	9-43
9.11.1	Principle and Waveforms	9-19	9.14.1	Spectrum of M-ary FSK	9-43

9.14.2	Bandwidth of M-ary FSK	9-44	9.15.8	MSK Transmitter	9-50
9.14.3	Advantage of M-ary FSK	9-44	9.15.9	MSK Receiver	9-51
9.14.4	Disadvantages	9-44	9.15.10	Advantages of MSK	9-52
9.14.5	Geometric Representation of M-ary FSK	9-44	9.15.11	Disadvantages of MSK System	9-52
9.14.6	Probability of Symbol Error for MFSK (Coherent Detection)	9-45	9.15.12	PSD and Bandwidth of MSK	9-53
9.14.7	Comparison of M-ary PSK and M-ary FSK	9-45	9.15.13	Comparison of QPSK and MSK Spectra ..	9-53
9.15	Minimum Shift Keying (MSK)	9-45	9.15.14	Gaussian MSK	9-53
9.15.1	Waveforms of MSK	9-46	9.16	Comparison of Digital CW Systems	9-54
9.15.2	Expression for MSK Signal	9-46		• Review Questions	9-55
9.15.3	MSK is called as Shaped QPSK	9-47		• Appendix-A :	A-1 to A-2
9.15.4	To Prove that MSK is FSK	9-47		• Appendix-B :	B-1 to B-1
9.15.5	Values of f_H and f_L	9-48		• Appendix-C :	C-1 to C-2
9.15.6	Signal Space Representation of MSK	9-48		• Appendix-D :	D-1 to D-3
9.15.7	Phase Continuity in MSK	9-49		• Appendix-E :	E-1 to E-2
				• Appendix-F :	F-1 to F-2
