

Chapter 1 : Basics of Water Supply Engineering
1-1 to 1- 46

Introduction to water supply scheme: importance of water infra structure and introduction to water infrastructure in India, data collection required for implementing water supply schemes, components and layouts. Design periods, factors affecting design periods. Quantity: rate of water consumption for various purposes like domestic, industrial, institutional, commercial, fire demand and water system losses, factors affecting rate of demand, population forecasting, including numerical. Quality: physical, chemical, radioactivity and bacteriological characteristics, heavy metals. Standards as per IS 10500-2012.

1.1	Water Supply Schemes.....	1-1	1.8	Design of Intakes.....	1-7
1.1.1	Water Supply Schemes - A Major Challenge.....	1-1	1.8.1	Factors Affecting the Location of Intakes.....	1-7
1.1.2	Financial Aspect.....	1-1	1.9	Classification of Intakes.....	1-8
1.1.3	Population to be Served	1-1	1.9.1	Lake Intakes.....	1-8
1.1.4	Quality of Water.....	1-2	1.9.2	River Intake/Intake Well/Jack Well.....	1-8
1.1.5	Rate of Consumption	1-2	1.9.3	Reservoir Intake	1-9
1.1.6	Sanitary Survey of the Region.....	1-2	1.9.4	Canal Intake	1-9
1.1.7	Sources of Water Supply	1-2	1.10	Conveyance of Water	1-9
1.1.8	Environmental Aspects of Water Resource Planning.....	1-2	1.10.1	Jack Well.....	1-10
1.1.8	Water Infrastructure	1-2	1.11	The Components of Conveyance of Water	1-10
1.1.8.1	Introduction.....	1-2	1.11.1	Pipes.....	1-10
1.1.8.2	Need of Water Infrastructure	1-3	1.11.2	Selection Criteria of the Pipes.....	1-10
1.1.9	Water Infrastructure in India	1-3	1.11.3	Classification of Pipes.....	1-11
1.1.9.1	Introduction.....	1-3	1.11.4	Cast-iron Pipes.....	1-11
1.2	Water Resource Planning	1-3	1.11.5	Wrought Iron-Pipes.....	1-12
1.2.1	Steps of Water Resource Development Project.....	1-4	1.11.6	Steel Pipes.....	1-12
1.3	Project Drawings.....	1-4	1.11.7	Cement Concrete Pipes	1-12
1.3.1	Types of Drawings	1-4	1.11.8	Cement - lined Cast Iron Pipes	1-13
1.4	Project Reports.....	1-5	1.11.9	Asbestos Cement Pipes	1-13
1.5	Layout of Water Supply Scheme.....	1-5	1.11.10	Copper and Lead Pipes	1-13
1.5.1	Components of Water Supply Scheme.....	1-5	1.11.11	Wooden Pipes	1-14
1.5.2	Location of the Water Supply Project	1-6	1.11.12	Plastic Pipes.....	1-14
1.6	Designed Period	1-6	1.11.13	Advantages and Disadvantages of Different Types of Pipes used in Water Supply Schemes	1-15
1.7	Sources of Water Supply.....	1-7	1.12	Transportation of Water	1-16
1.7.1	Intakes.....	1-7	1.12.1	Discharge through Pipes	1-16
			1.12.2	Causes of Resistance	1-16
			1.12.3	Selection of the Pipes.....	1-17
			1.13	Joints	1-17
			1.13.1	Joints in Concrete Pipes.....	1-17
			1.13.2	Joints in the Cast Iron Pipes.....	1-17
			1.14	Valves.....	1-18
			1.14.1	Types of Valves.....	1-18
			1.15	Design of Pumps	1-20
			1.15.1	Classification of Pumps.....	1-20
			1.15.2	On the Basis of the Principles of Operation	1-20
			1.15.3	Classification of Pumps based on the Type of Power Used	1-23
			1.15.4	Designing of Rising Main.....	1-23

1.15.4.1 Selection of Pumps 1-24	1.23.3 The Methods to Collect Water Samples..... 1-40
1.15.5 Hydraulic Design of Pumping Station 1-24	1.23.4 Examination of the Water Samples 1-40
1.15.5.1 Important Steps in Design of Pumping Station... 1-24	1.24 Impurities in Water..... 1-40
1.15.6 Examples on Design of Pumping Station 1-26	1.24.1 Physical Parameters..... 1-41
1.16 Quantity of Water 1-27	1.24.2 Chemical Parameters..... 1-41
1.17 Classification of Water Demands..... 1-27	1.24.3 Radioactive Characteristics of Water 1-42
1.17.1 Domestic Water Demand..... 1-27	1.24.4 Bacteriological Parameters..... 1-42
1.17.2 Example on the Daily Consumption of Water..... 1-28	1.25 Most Probable Number (MPN) 1-43
1.17.3 Commercial and Industrial Water Demand..... 1-28	1.26 Indian Standards for Drinking Water 1-43
1.17.4 Water Demand for Fire Fighting 1-29	1.27 Water Related Diseases 1-45
1.17.5 Demand of Water for Public Use 1-29	2.27.1 Water Borne Diseases 1-45
1.17.6 Demand of Water for Domestic Animals 1-29	1.27.2 Water Based or Water Induced Diseases..... 1-46
1.17.7 Per Capita Water Demand..... 1-29	1.27.3 Water Related Vector Diseases 1-46
1.17.8 Factors Affecting Rate of Demand 1-29	1.27.4 Water Scarcity Diseases 1-46
1.18 Waste and Losses of Water..... 1-30	1.27.5 Problems Created by Fluorides in Drinking Water 1-46
1.18.1 Methods to Reduce the Losses and Wastage of Water 1-31	
1.19 Forecasting of Population..... 1-31	Chapter 2 : Principles of Water Treatment 2-1 to 2-25
1.19.1 Arithmetical Increase Method..... 1-31	Water treatment : principles of water treatment operations and processes, water treatment flow sheets with respect to various sources, criteria for site selection for WTP. Aeration: principle and concept, necessity, methods, removal of taste and odour, design of aeration fountain. Sedimentation: plain and chemical assisted, principle, efficiency of an ideal settling basin, types of sedimentation, settling velocity, types of sedimentation tanks, design of plain sedimentation tank, introduction and design of tube settlers.
1.19.2 Geometrical Increase Method..... 1-31	
1.19.3 Incremental Increase Method..... 1-32	
1.19.4 Logistic Method..... 1-32	
1.19.5 Declining Growth [Negative Growth] Model..... 1-32	
1.20 Examples on Forecasting of Population 1-32	
1.21 Water Demand Estimation 1-36	
1.21.1 Consumptive Use..... 1-36	
1.21.2 Non-Consumptive Use..... 1-37	
1.21.3 Fire Fighting 1-37	
1.21.4 Water Requirement for Industrial Purpose 1-37	
1.21.5 Average Water Demand 1-38	
1.22 Examples on the Water Requirements for Fire-fighting..... 1-38	
1.23 Quality of Water : [As per IS:10500(2012)] 1-39	
1.23.1 Collection of Water Samples..... 1-39	
1.23.2 Points to be Considered while Collection the Samples..... 1-40	
	2.1 Water Treatment Schemes 2-1
	2.1.1 Water Treatment Schemes..... 2-1
	2.1.2 Water Treatment Plant 2-1
	2.1.3 Types of Screens 2-2
	2.1.4 Types of Heavy Metals Found in Water..... 2-2
	2.2 Aeration : A Method of Water Treatment 2-3
	2.2.1 Purpose of Aeration 2-3
	2.2.2 Limitations of Aeration Method..... 2-3
	2.2.3 Methods of Aeration..... 2-3
	2.2.4 Design of Aeration Fountain (Cascade Type) 2-4
	2.2.5 Examples on Design of Aeration Fountain 2-4

<p>2.3 Sedimentation..... 2-7</p> <p>2.3.1 Introduction to Plain Sedimentation2-7</p> <p>2.3.2 Advantages of Plain Sedimentation.....2-8</p> <p>2.3.3 Chemically Assisted Sedimentation2-8</p> <p>2.3.4 Sedimentation Tanks and their Design.....2-8</p> <p>2.3.5 Type-I and Type-II Settling Basins2-8</p> <p>2.3.6 Classification of Sedimentation Tanks/ Basins.....2-8</p> <p>2.3.7 Design of the Sedimentation Tank / Fill and draw type.....2-9</p> <p>2.3.8 Design of Sedimentation Tank / Horizontal Flow.....2-10</p> <p>2.3.9 Surface Loading.....2-11</p> <p>2.3.9.1 Efficiency of Removal of Particle of given Settling Velocity is Inversely Proportional to the Surface Loading Rate.....2-11</p> <p>2.3.10 Discrete Particles.....2-12</p> <p>2.3.11 Mean Velocity Gradient (G).....2-13</p> <p>2.3.12 Various Design Criteria to be followed in the Design of Plain Sedimentation Tank.....2-13</p> <p>2.3.13 Examples on Sedimentation Tank2-13</p> <p>2.3.14 Detention Time.....2-20</p> <p>2.4 Tube Settlers2-20</p> <p>2.4.1 Advantages of Tube Settlers.....2-23</p> <p>2.4.2 Design Criteria of Tube Settlers.....2-23</p> <p>2.4.3 Design of Tube Settler2-23</p> <p>2.5 Examples on Tube Settler2-24</p>	<p>3.1 Coagulation of Water 3-1</p> <p>3.1.1 Theory of Coagulation / Principles of Coagulation3-1</p> <p>3.1.2 Classification of Coagulants3-2</p> <p>3.1.3 Dosage of Coagulants.....3-3</p> <p>3.1.4 Detention Period and Surface Loading.....3-3</p> <p>3.2 Coagulation by Natural Coagulant Moringa Oleifera..... 3-3</p> <p>3.2.1 Coagulation Process of M.O. Seeds.....3-4</p> <p>3.2.2 Advantages of M.O. over the Inorganic Coagulant Like Alum.....3-4</p> <p>3.2.3 Disadvantages of M.O3-4</p> <p>3.3 Mixing Devices 3-4</p> <p>3.3.1 Centrifugal Pumps3-4</p> <p>3.3.2 Compressed Air.....3-4</p> <p>3.3.3 Hydraulic Jump Method.....3-4</p> <p>3.3.4 Mixing Channel3-4</p> <p>3.3.5 Mixing Basins with Baffle Walls.....3-5</p> <p>3.3.6 Mixing Basins with Mechanical Means3-5</p> <p>3.3.7 Velocity Gradient ‘G’3-5</p> <p>3.3.8 The Plain Sedimentation3-5</p> <p>3.3.9 Sedimentation with Coagulation3-5</p> <p>3.4 Design of Flocculator 3-5</p> <p>3.4.1 Differentiation between Coagulation and Flocculation.....3-6</p> <p>3.4.2 Design of Flocculator3-6</p> <p>3.4.3 Important Terms - Design of Flocculator3-6</p> <p>3.4.4 Design Criteria for Flocculator Provided with Rotating Paddles.....3-7</p> <p>3.4.5 Clariflocculator3-7</p> <p>3.4.6 Design of Clariflocculator3-8</p> <p>3.4.7 Design of a Mechanical Clariflocculator3-8</p> <p>3.5 Examples on Design of Flocculator and Clariflocculator 3-8</p> <p>3.6 Difference between Plain Sedimentation and Sedimentation with Coagulation3-11</p> <p>3.7 Theory of Filtration.....3-11</p> <p>3.7.1 Filtration Process3-11</p>
---	---

Chapter 3 : Design of Water Treatment Plant 3-1 to 3-23

Coagulation and flocculation: necessity of coagulation, principle of coagulation, common coagulants alum and ferric salts, introduction to other coagulant aids like bentonite clay, lime stone, silicates and polyelectrolytes etc, introduction to natural coagulants, concept of mean velocity gradient and power consumption, design of flocculation chamber, design of clari-flocculator. Filtration: theory of filtration, mechanism of filtration, filter materials, types: rapid, gravity, pressure filter, multimedia and dual media filters, components, under-drainage system, working and cleaning of filters, operational troubles, design of rapid sand gravity filters.

3.7.2	Types of Filters.....	3-11	4.2.2	Removal of the Hardness of Water	4-8
3.7.3	Design Criteria for Rapid Sand Filter.....	3-14	4.2.3	Lime-Soda Process.....	4-9
3.7.4	General Rules to be Followed for Design of Under Drainage System.....	3-15	4.2.4	Chemical Reactions in the Process of Water Softening	4-9
3.7.5	Design Criteria for Wash Water Troughs (Gutter)	3-15	4.2.5	Procedure of Determination of pH and Alkalinity of Water	4-9
3.8	Examples.....	3-16	4.3	Zeolite Process.....	4-10
3.9	Operational Troubles in Filters	3-18	4.3.1	Equipments required for this Process	4-10
3.9.1	Introduction.....	3-18	4.3.2	Advantages of Lime-soda Process.....	4-10
3.9.2	Mixed Media Filters.....	3-19	4.3.3	Disadvantages of Lime-soda Process.....	4-11
3.9.3	Controlling the Operational Troubles in Filtration Process	3-19	4.3.4	Advantages of Zeolite Process.....	4-11
3.9.4	Comparison between the Slow Sand Filter and Rapid Fast Sand Filter	3-19	4.3.5	Disadvantages of Zeolite Process	4-11
3.10	Solved Examples.....	3-19	4.3.6	Comparison between Lime-Soda Process and Zeolite Process.....	4-11
3.11	Pressure Filters	3-22	4.4	Demineralization Process	4-12
3.11.1	Suitability of Pressure Filters	3-22	4.4.1	Process of Reverse Osmosis	4-12
3.10.2	Roughening Filter and Double Filtration.....	3-22	4.4.2	Removal of Iron and Manganese	4-13
3.11.3	Multimedia and Duel-Media Filters.....	3-23	4.4.3	Method to Remove Iron and Manganese	4-13
Chapter 4 : Introduction to Advanced Water Treatment Methods 4-1 to 4-21			4.4.4	Demineralization of Water Softening by Ion-exchange Method	4-13
Disinfection: mechanism, factors affecting disinfection, types of disinfectants, types and methods of chlorination, break point chlorination, bleaching powder estimation. Water softening methods and demineralization: lime-soda, ion-exchange, R. O. and electro dialysis, fluoridation and defluoridation, introduction to advanced water treatment systems (nano technology), introduction to desalination and various methods of desalination.			4.4.5	Classification of Ion-exchange Resins	4-13
4.1	Methods of Disinfection.....	4-1	4.4.6	Diffused Double Layer Theory.....	4-13
4.1.1	Disinfectants.....	4-1	4.4.7	Ion-exchange Process.....	4-14
4.1.2	Minor Methods of Disinfection.....	4-2	4.5	Removal of Colour, Odour and Taste of Drinking Water	4-14
4.1.3	Chlorination Treatment.....	4-2	4.5.1	Changes in Colour, Odour and Tastes of Drinking Water	4-15
4.1.3.1	Applications of Chlorine.....	4-2	4.5.2	Aeration	4-15
4.1.4	Break Point Chlorination	4-3	4.5.3	Methods of Aeration.....	4-15
4.1.5	Estimation of Bleaching Powder	4-5	4.6	Advantages of Activated Carbon Treatment...4-15	
4.1.6	Factors Affecting Chlorination	4-5	4.6.1	Activated Carbon Treatment / or Adsorption Method	4-16
4.1.7	Examples Based on Water Treatment.....	4-6	4.6.2	Methods of Application.....	4-16
4.2	Water Softening Methods.....	4-8	4.7	Use of Copper Sulphate	4-16
4.2.1	Classification of Hardness	4-8	4.8	Fluoridation.....	4-17
			4.8.1	Sources of Fluorides.....	4-17
			4.8.2	Application of Fluorides	4-17

4.9 Feeding of Fluorides4-17

4.9.1 Sodium Fluoride (NaF) 4-18

4.9.2 Hexafluorosilicic Acid (H₂SiF₆)..... 4-18

4.9.3 Process Fluoridation..... 4-18

4.10 Defluoridation4-18

4.11 Methods of Desalination.....4-19

4.12 Water Treatment of the Swimming Pools.....4-20

4.12.1 Treatment Method..... 4-20

Chapter 5 : Water Distribution System and Rainwater Harvesting, and GIS 5-1 to 5-23

Water distribution system: system of water supply: continuous and intermittent system, different distribution systems and their components, ESR: design of ESR capacity, wastage and leakage of water: detection and prevention. Rainwater harvesting: introduction, need, methods and components of domestic rainwater harvesting system. Design of roof top rainwater harvesting system, use of GIS and drone technology in water management: source, treatment and distribution.

5.1 Layout of Distribution Network..... 5-1

5.1.1 Objectives of Good Distribution System5-1

5.1.2 Pressure in the Distribution System.....5-1

5.2 Systems of Water Distribution 5-2

5.2.1 Gravitational System.....5-2

5.2.2 Direct Pumping5-2

5.2.3 Combined System.....5-2

5.3 Appurtenances in Water Distribution System 5-2

5.3.1 Purpose of the Appurtenances.....5-2

5.3.2 Types of Appurtenances.....5-2

5.4 Methods of Water Distribution 5-3

5.4.1 Dead-end or Tree System5-3

5.4.2 Grid-Iron System5-3

5.4.3 Circular or Ring System.....5-4

5.4.4 Radial System.....5-4

5.4.5 Water Supply Systems5-4

5.5 Storage Capacity..... 5-5

5.5.1 Classification of Reservoirs.....5-5

5.5.1.1 Types of Service Reservoir.....5-5

5.5.2 Design of Storage Capacity of ESR5-7

5.5.3 Examples on Design of Storage Capacity of ESR.....5-8

5.5.4 Functions of Elevated Service Reservoirs5-13

5.5.5 Determining the Capacity of Reservoirs5-14

5.5.6 Differences between Fire Reserve and Breakdown Reserve.....5-15

5.5.7 Method to calculate the capacity of a storage reservoir5-15

5.6 Reservoir Losses5-15

5.6.1 Absorption Losses.....5-16

5.6.2 Evaporation Losses5-16

5.6.3 Percolation Losses5-16

5.6.4 Water Leakage Detection System.....5-16

5.6.5 Leakage Prevention System.....5-16

5.7 Water Harvesting Technology5-17

5.7.1 Methods of Water Harvesting.....5-17

5.7.2 Purpose of Water Harvesting.....5-17

5.7.3 Need of Rainwater Harvesting5-17

5.7.4 Water Harvesting in Rural Areas.....5-17

5.7.5 Water Harvesting in the Urban Areas / Roof Top Rain Water System5-18

5.7.6 Reduce Runoff and Enrich the Water Table5-19

5.7.7 Components of Rainwater Harvesting.....5-19

5.7.8 Design of Roof top Rainwater Harvesting System5-20

5.7.9 Examples on Design of RWH5-21

5.8 A Case Study of Ralegan Siddhi.....5-21

5.9 Use of G.I.S. Technology In Water Management, Water Sources, Treatment And Distribution..5-21

5.9.1 Introduction.....5-21

5.9.2 Use of G.I.S. Water Management.....5-22

5.9.3 Use of G.I.S. to find of sources of Ground Water ...5-22

5.9.4 Treatment or Quality Analysis of Water by Using G.I.S.5-22

5.9.5 Use of Drone Technology in Water Management Sources Treatment and Distribution.....5-22

5.9.6 Use of Unmanned Aerial Vehicles (UAVs) in Water Management.....5-22

5.9.7 The use of Drones and Satellites in Agriculture....5-22

**Chapter 6 : Water Treatment Plant for Infrastructure
6-1 to 6-18**

Introduction to Packaged WTP in townships, large commercial buildings, educational institutes, necessity (on-site water treatment), WTP for swimming pools, Building plumbing: introduction to various types of home plumbing systems for water supply and waste water disposal, high rise building plumbing, pressure reducing valves, break pressure tanks, storage tanks, building drainage for high rise buildings, various kinds of fixtures and fittings used for water saving such as water saving aerators, Government of India initiatives such as SMART city mission and AMRUT mission for improvement of infrastructure sector, service level benchmarks in urban infrastructure and introduction to Jal Jeevan Mission and its implication in rural India.

6.1 Packaged Water Treatment Plant (W.T.P.) / Big Commercial Plants..... 6-1

6.1.1 Important Aspects of W.T.P / Advantages of WTP / Need W.T.P.6-1

6.2 The Packaged Treatment Plant (WTP)..... 6-1

6.2.1 To Commercial Buildings.....6-1

6.2.2 For Educational Institutions.....6-2

6.2.3 Packaged W.T.P. for Swimming Pools6-2

6.3 Various Types of House/Building Plumbing Systems for Fresh Water Supply 6-2

6.3.1 Introduction.....6-2

6.3.2 Municipal Water Supply to the Building/Houses ...6-2

6.3.3 Storage of Water Supply System in Building.....6-2

6.3.4 Storage Capacity of Tank6-3

6.3.5 Overhead Storage Tank and Underground Storage Tank.....6-3

6.4 Service Connection from the Main 6-4

6.4.1 Introduction.....6-4

6.4.2 Component Parts of House Connection.....6-4

6.5 Water Meters..... 6-5

6.5.1 Introduction.....6-5

6.5.2 Requirements of Good Water Meter6-5

6.5.3 Types of Water Meter6-5

6.6 Fixture and Fittings..... 6-6

6.6.1 Introduction.....6-6

6.6.2 Purpose of Valve6-6

6.6.3 Type of Valves.....6-6

6.6.4 Fitting, Taps and Accessories.....6-7

6.7 House Drainage and Environmental Sanitation 6-9

6.7.1 Introduction.....6-9

6.7.2 Important Terminologies Connected to the House-Drainage6-9

6.8 Design and The Construction Principles of The House-Drainage.....6-10

6.8.1 Introduction.....6-10

6.8.2 Guidelines for the Designs and For the Construction of House Drainage.....6-10

6.9 Systems of Plumbing.....6-11

6.9.1 Introduction.....6-11

6.9.2 Classification of Plumbing Systems.....6-11

6.10 The Selection of the Plumbing System.....6-12

6.10.1 Introduction.....6-12

6.10.2 Functions of an Aerator and the Deaerator6-12

6.10.3 The Plumbing Operations.....6-13

6.10.4 Safety and Precautions in Plumbing Work6-13

6.11 Drainage Layout for Residence6-13

6.11.1 Introduction.....6-13

6.11.2 Site Plan6-14

6.11.3 Longitudinal Section of Sewer-Line6-14

6.11.4 Location of the Public Sewer.....6-14

6.11.5 Details of the Plans for all the Floors.....6-14

6.11.6 Execution of the Sanctioned Plan.....6-14

6.11.7 Preparation and Submission of Plans of House Drainage6-15

6.12 Testing of the Drains and Pipes6-15

6.12.1 Introduction.....6-15

6.12.2 Air Test.....6-15

6.12.3 Coloured -Water Test6-15

6.12.4 Hydraulic Test.....6-15

6.12.5 Smell Test.....6-15

6.12.6 Smoke Test.....6-15

6.13	Maintenance of the House-Drainage System ..6-15	6.14.4	Number one Smart City in India6-16
6.13.1	Introduction..... 6-15	6.14.5	Selection Criteria of the smart City in India..... 6-16
6.13.2	Avoid the Entry of Undesired Material into the Drain 6-16	6.14.6	Position of Pune 6-17
6.13.3	Flush the Water-closet (W.C.) Regularly..... 6-16	6.15	Concept of AMRUT MISSION6-17
6.13.4	Have a Regular Inspection..... 6-16	6.15.1	Introduction..... 6-17
6.13.5	Make use of Quality Material for the Drainage System..... 6-16	6.15.2	The Components of AMURT Mission..... 6-17
6.13.6	Make Use of Disinfectants 6-16	6.15.3	The AMRUT Cities in India 6-17
6.13.7	Make use of authorized Workers for Sanitary Fittings Work 6-16	6.16	Concept of Jal Jeevan Mission.....6-17
6.14	Concept of Smart Cities in India6-16	6.16.1	Introduction..... 6-17
6.14.1	Introduction..... 6-16	6.16.2	The Methodology for JJM 6-17
6.14.2	Idea of a Smart City 6-16	6.16.3	Vision Statement of Jal Jeevan Mission 6-17
6.14.3	Smart City Mission in India..... 6-16	6.16.4	Mission of Jal Jeevan Missions J.J.M. is to Assist Empower and Facilitate..... 6-17
		6.16.5	Objectives of JJM 6-18
