Computer Communication Networks

(Code : ECC602)

Semester VI – Electronics and Telecommunication Engineering
(Mumbai University)

**Strictly as per New Choice Based Credit and Grading System Syllabus
(Revise 2019 'C' Scheme) of Mumbai University with effective from Academic Year 2021-2022**

J. S. Katre

M.E. (Electronics and Telecommunication)

Formerly, Assistant Professor

Department of Electronics Engineering

Vishwakarma Institute of Technology (V.I.T.), Pune.

Maharashtra, India

Computer Communication Networks (Code : ECC602)

(Semester VI – Electronics and Telecommunication Engineering, Mumbai University)

J. S. Katre

*We dedicate this Publication soulfully and wholeheartedly,
in loving memory of our beloved founder director,
Late Shri. Pradeepji Lalchandji Lunawat,
who will always be an inspiration, a positive force and strong support
behind us.*

“My work is my prayer to God”

- Lt. Shri. Pradeepji L. Lunawat

*Soulful Tribute and Gratitude for all Your
Sacrifices, Hardwork and 40 years of Strong Vision...*

Syllabus...

Computer Communication Networks : Sem. VI (Electronics and Telecomm. Engg., (MU))

Course Code	Course Name	Teaching Scheme (Contact Hours)			Credits Assigned			
		Theory	Practical	Tutorial	Theory	Practical	Tut.	Total
ECC602	Computer Comm. Networks	03	–	–	03	–	–	03

Course Code	Course Name	Examination Scheme							
		Theory Marks				Exam Duration (Hrs.)	Term Work	Practical and Oral	Total
		Internal Assessment			End Sem. Exam.				
		Test 1	Test 2	Avg.					
ECC602	Computer Comm. Networks	20	20	20	80	03	—	—	100

Course pre-requisite :

ECC : 405– Principles of communication engineering

ECC : 501-Digital communication

Course Objectives :

1. To introduce networking architecture and protocols.
2. To understand and recognize the layer-wise functions, services, data formats, protocols, hardware devices and addresses in the TCP / IP architecture
3. To build an understanding of application layer protocols.
4. To apply different addressing and routing schemes.

Module 1

Introduction to Network Architectures, Protocol Layers, and Service models :

Applications of computer networks. **Network types** : LAN, MAN, and WAN, Network topologies. Protocols and standards, Need of layered protocol architecture, OSI reference model. **TCP / IP architecture** : Protocol suite, Comparison of OSI and TCP / IP, Layer wise network hardware devices (NIC, Repeaters, Hubs, Bridges, Switches, Routers, Gateway and Their comparison), **Addressing** : Physical / Logical / Port addressing / Socket addressing.

(Refer Chapter 1)

Module 2

Physical Layer :

Guided transmission media : Comparison among Coaxial, Optical fiber and Twisted pair cables. Unguided transmission media. Transmission impairments. **Broadband standards** : Cable modem, DSL and HFC.

(Refer Chapter 2)

Module 3

Data Link Layer :

Data link services : Framing, Flow control, Error control, **ARQ methods** : Transmission efficiency, Piggybacking. **High Level Data Link Control (HDLC)** : HDLC configurations, Frame formats, HDLC bit stuffing and De-stuffing, Typical frame exchanges. **Medium Access Control Protocols** : ALOHA, Slotted ALOHA, CSMA, CSMA/CD.

(Refer Chapters 3 and 4)

Module 4

Network Layer :

Introduction to telephone networks and Circuit switching principles. Introduction to data networks and Packet switching principles. Network layer services and functions. **Internet Protocol** : Principles of Internetworking, requirements, IPv4 packet, IPv4 addressing (Classful and Classless (CIDR)). **Routing in Packet Switching Networks** : Characteristics, Routing strategies. **Routing algorithms** : Link state routing, Distance vector Routing and Path vector routing, **Routing protocols** : RIP, OSPF, BGP and EIGRP. Subnetting, Supernetting, VLSM, and NAT. Introduction to ICMP, ARP, RARP, **IPv6** (IPv6 datagram format, comparison with IPv4 and Transition from IPv4 to IPv6). Quality of service.

(Refer Chapters 5 and 6)

Module 5

Transport Layer :

Connectionless and Connection-oriented services at transport layer, **Transmission Control Protocol (TCP)** : TCP services, TCP segment, TCP three way handshake., User Datagram Protocol (UDP), UDP services, UDP datagram, TCP and UDP checksum calculation, Flow control, Error control and Congestion control.

(Refer Chapter 7)

Module 6

Application Layer :

Introduction to Application Layer Protocols : HTTP, FTP, DNS, SMTP, TELNET, SSH, DHCP. (Refer Chapter 8)

□□□

**Module 1****Chapter 1 : Introduction 1-1 to 1-54**

Syllabus : Applications of computer networks. **Network types** : LAN, MAN, and WAN, Network topologies. Protocols and standards, Need of layered protocol architecture, OSI reference model. **TCP / IP architecture** : Protocol suite, Comparison of OSI and TCP / IP, Layer wise network hardware devices (NIC, Repeaters, Hubs, Bridges, Switches, Routers, Gateway and Their comparison), **Addressing** : Physical / Logical / Port addressing / Socket addressing.

Module 2

Chapter 2 : Physical Layer
2-1 to 2-22

Syllabus : Guided transmission media : Comparison among Coaxial, Optical fiber and Twisted pair cables. Unguided transmission media. Transmission impairments.

Broadband standards : Cable modem, DSL, and HFC.

<p>2.1 Introduction to Physical Layer 2-2</p> <p> 2.1.1 Physical Layer Design Issues 2-2</p> <p> 2.1.2 Transmission Media and Physical Layer 2-2</p>
--

2.2	Transmission Media2-3	2.11	Introduction to High Speed Digital Access 2-16
2.2.1	Classification of Transmission Media2-3	2.12	DSL Technology 2-16
2.2.2	Comparison of Wired and Wireless Media2-3	2.13	ADSL 2-16
2.2.3	Selection of Transmission Media2-4	2.13.1	Use of Existing Local Loop 2-17
2.3	Types of Wired Media2-4	2.13.2	Adaptive Technology 2-17
2.4	Twisted Pair Cables2-4	2.13.3	Modulation Techniques 2-17
2.4.1	UTP (Unshielded Twisted Pair)2-4	2.13.4	Discrete Multitone Technique (DMT) 2-17
2.4.2	STP (Shielded Twisted Pair)2-5	2.13.5	ADSL Modem 2-18
2.4.3	Comparison of Twisted Pair Cables2-5	2.13.6	DSLAM 2-18
2.5	Co-axial Cables2-6	2.14	xDSL (Other DSL Technologies) 2-18
2.6	Optical Fiber Cables2-7	2.14.1	RADSL 2-18
2.6.1	Characteristics of Optical Fiber Cables...2-7	2.14.2	HDSL 2-19
2.6.2	Advantages of Optical Fibers2-8	2.14.3	Comparison of T-1 and HDSL Technology 2-19
2.6.3	Disadvantages of Optical Fiber2-8	2.14.4	SDSL 2-19
2.6.4	Applications2-8	2.14.5	VDSL 2-19
2.6.5	Comparison of Wired Media2-8	2.14.6	Comparison of xDSL Schemes 2-20
2.7	Wireless Media2-8	2.15	Cable TV2-20
2.8	EM Spectrum for Wireless Media2-9	2.15.1	Traditional Cable TV Network 2-20
2.8.1	Communication Bands2-9	2.15.2	HFC (Hybrid Fiber Coax) 2-21
2.8.2	The ISM Band2-9	2.16	Cable Network for Data Transmission 2-22
2.8.3	Infrared Signals2-9	2.16.1	Cable Modem (CM) 2-22
2.8.4	Visible Light2-10	2.16.2	Cable Modem Transmission System (CMTS) 2-22
2.9	Types of Wireless Media2-10	• Review Questions 2-22	
2.9.1	Radio Wave Transmission Systems2-10		
2.9.2	Microwave Transmission System2-11		
2.9.3	Use of Infrared Light as Medium2-12		
2.9.4	Advantages of Wireless Transmission .2-12		
2.9.5	Disadvantages of Wireless Transmission2-12		
2.9.6	Comparison of Wired and Wireless Media2-12		
2.10	Transmission Impairments2-13		
2.10.1	Attenuation2-13		
2.10.2	Delay Distortion2-14		
2.10.3	Harmonic Distortion2-14		
2.10.4	Noise2-14		
2.10.5	Signal to Noise Ratio2-15		

Module 3

Chapter 3 : Data Link Layer
3-1 to 3-38

Syllabus : Data link services : Framing, Flow control, Error control, **ARQ methods** : Transmission efficiency, Piggybacking, **High Level Data Link Control (HDLC)** : HDLC configurations, Frame formats, HDLC bit stuffing and De-stuffing, Typical frame exchanges.

3.1	Introduction 3-2
3.1.1	Position of Data Link Layer 3-2
3.2	Data Link Layer Design Issues 3-2
3.3	Services Provided to Network Layer 3-3
3.3.1	Types of Services Provided 3-3

3.3.2	Unacknowledged Connectionless Service	3-3	3.9.3	A Simplex Protocol for Noisy Channel ..	3-21
3.3.3	Acknowledged Connectionless Service	3-3	3.9.4	Piggybacking	3-22
3.3.4	Acknowledged Connection Oriented Service	3-3	3.10	Sliding Window Protocols	3-22
3.4	Framing	3-4	3.10.1	A One Bit Sliding Window Protocol (Stop and Wait ARQ)	3-25
3.4.1	Framing Methods	3-4	3.10.2	A Protocol using GO Back n	3-27
3.4.2	Character Count	3-4	3.10.3	Pipelining	3-29
3.4.3	Starting and Ending Character with Character Stuffing	3-4	3.10.4	Selective Repeat ARQ	3-29
3.4.4	Character Stuffing	3-5	3.10.5	Protocol Performance	3-30
3.4.5	Starting and Ending Flags, with Bit Stuffing	3-5	3.10.6	Comparison of Sliding Window Protocols	3-31
3.4.6	Physical Layer Coding Violations	3-6	3.11	High Level Data Link Control (HDLC) Protocol ..	3-32
3.5	Error Control	3-6	3.11.1	Operating Modes for Data Transfer	3-32
3.5.1	Function of a Timer	3-7	3.11.2	Frame Structure in HDLC	3-33
3.6	Error Detection and Correction	3-7	3.11.3	Frame Types in HDLC	3-34
3.6.1	Encoding and Decoding	3-7	3.11.4	Transparency in HDLC	3-35
3.6.2	Redundancy	3-7	3.11.5	Bit Stuffing	3-36
3.6.3	Classification of Error Control Techniques	3-8	3.11.6	HDLC Frame Exchanges	3-37
3.6.4	Error Detection Methods	3-8		• Review Questions	3-38
3.6.5	Parity Checking	3-8	Module 3		
3.6.6	Checksum Error Detection	3-9	Chapter 4 : Medium Access Control Protocols		
3.6.7	Two Dimensional Parity Check (Block Parity)	3-10	4-1 to 4-18		
3.6.8	Cyclic Redundancy Check (CRC)	3-11	Syllabus : Medium Access Control Protocols : ALOHA, Slotted ALOHA, CSMA, CSMA/CD.		
3.6.9	CRC Checker	3-12	4.1	Introduction	4-2
3.7	Error Correction	3-14	4.1.1	MAC and LLC Sublayers	4-2
3.7.1	Classification of Error-correcting Codes	3-15	4.2	The Channel Allocation Problem	4-2
3.7.2	Linear Block Codes	3-15	4.2.1	Static Channel Allocation	4-3
3.7.3	Hamming Codes	3-15	4.2.2	Dynamic Channel Allocation	4-3
3.7.4	ARQ Technique	3-19	4.3	Multiple Access	4-4
3.8	Flow Control	3-20	4.3.1	Random Access	4-4
3.9	Elementary Data Link Protocols	3-20	4.3.2	Evolution of Random Access Methods ..	4-4
3.9.1	An Unrestricted Simplex Protocol	3-20	4.3.3	Taxonomy (Classification) of Multiple Access Protocols	4-4
3.9.2	A Simplex Stop and Wait Protocol	3-21	4.4	Multiple Access ALOHA System	4-5
			4.4.1	Pure ALOHA	4-5
			4.4.2	Efficiency of an ALOHA System	4-6
			4.4.3	Slotted ALOHA	4-7

4.4.4	Comparison of Pure and Slotted ALOHA	4-8
4.5	Carrier Sense Multiple Access (CSMA)	4-9
4.5.1	Carrier Sense Multiple Access / Collision Detection (CSMA / CD)	4-9
4.5.2	CSMA / CD Procedure	4-10
4.5.3	CSMA/CA	4-10
4.6	Collision Free Protocols	4-12
4.6.1	Bit-map Protocol	4-12
4.6.2	Binary Countdown	4-12
4.6.3	Limited Contention Protocols	4-13
4.6.4	The Adaptive Tree Walk Protocol	4-13
4.7	Controlled Access	4-14
4.7.1	Reservation Systems	4-14
4.7.2	Polling	4-15
4.7.3	Token Passing	4-16
	• Review Questions	4-18

Module 4

Chapter 5 : Network Layer

5-1 to 5-76

Syllabus : Introduction to telephone networks and Circuit switching principles. Introduction to data networks and Packet switching principles. Network layer services and Functions. **Internet Protocol** : Principles of Internetworking, Requirements, IPv4 packet, IPv4, Addressing (Classful and classless (CIDR)). **Routing in Packet Switching Networks** : Characteristics, Routing strategies. **Routing algorithms** : Link state routing, Distance vector routing and Path vector routing, Subnetting, Supernetting, VLSM and NAT, **IPv6** (IPv6 datagram format, Comparison with IPv4 and Transition from IPv4 to IPv6).

5.1	Switching	5-3
5.1.1	Switching Methods	5-3
5.1.2	Circuit Switching	5-3
5.1.3	Circuit Switched Technology in Telephone Networks	5-5
5.2	Packet Switching	5-5
5.2.1	Datagram Packet Switching	5-5
5.2.2	Efficiency	5-6
5.2.3	Delay	5-6

5.2.4	Advantages of Packet Switching	5-6
5.2.5	Disadvantages of Packet Switching	5-6
5.2.6	Datagram Networks in Internet	5-6
5.3	Virtual Circuit Packet Switching	5-6
5.3.1	Three Phases of Communication	5-7
5.3.2	Efficiency	5-7
5.3.3	Delay	5-7
5.3.4	Advantages of Virtual Circuit Packet Switching	5-7
5.3.5	Disadvantages of Virtual Circuit Packet Switching	5-8
5.4	Comparison of Circuit and Packet Switching	5-8
5.5	Network Layer	5-8
5.5.1	Network Layer Duties	5-8
5.6	Network Layer Design Issues	5-9
5.6.1	Store and Forward Packet Switching	5-9
5.6.2	Services Provided to the Transport Layer	5-10
5.6.3	Implementation of Connectionless Service	5-10
5.6.4	Implementation of Connection-Oriented Service	5-11
5.6.5	Internal Organization of the Network Layer	5-11
5.6.6	Comparison of Virtual Circuit and Datagram Subnets	5-12
5.7	Routing in Packet Switching Network	5-12
5.7.1	Characteristics	5-12
5.7.2	Performance Criteria	5-13
5.8	Routing and Forwarding	5-13
5.8.1	Routing	5-13
5.8.2	Forwarding	5-13
5.9	Network Layer Services	5-13
5.9.1	Logical Addressing	5-14
5.9.2	Services Provided at the Source Computer	5-14
5.9.3	Services Provided at Each Router	5-15
5.9.4	Services Provided at the Destination Computer	5-15

5.10	Other Services	5-15	5.18.1	Routing	5-32
5.10.1	Error Control	5-16	5.18.2	Cost or Metric	5-32
5.10.2	Flow Control	5-16	5.18.3	Routing Tables	5-32
5.10.3	Congestion Control	5-16	5.18.4	Comparison between Static Routing and Dynamic Routing	5-33
5.10.4	Quality of Service (QoS)	5-16	5.19	Network Layer Congestion	5-33
5.10.5	Security	5-16	5.20	Congestion Control	5-34
5.11	Routing	5-16	5.20.1	Need of Congestion Control	5-34
5.11.1	Types of Routing	5-16	5.20.2	Causes of Congestion	5-34
5.11.2	Intra and Interdomain Routing	5-17	5.20.3	Difference between Congestion Control and Flow Control	5-35
5.11.3	Unicast Routing	5-17	5.20.4	Principle of Congestion Control	5-35
5.11.4	Broadcast Routing	5-18	5.21	Congestion Prevention Policies	5-36
5.11.5	Multicast Routing	5-18	5.21.1	Congestion Control in Virtual Circuit Subnets	5-37
5.12	Routing Algorithms	5-18	5.21.2	Approaches to Congestion Control	5-37
5.12.1	Desired Properties of a Routing Algorithm	5-19	5.21.3	Congestion Control in Datagram Subnets	5-39
5.12.2	Types of Routing Algorithms	5-19	5.22	IPv4 Addresses	5-41
5.12.3	Optimality Principle	5-19	5.22.1	Uniqueness of IP Addresses	5-41
5.13	Static Algorithms	5-20	5.22.2	Address Space	5-41
5.13.1	Shortest Path Routing	5-20	5.22.3	Notation	5-41
5.13.2	Flooding	5-20	5.22.4	IPv4 Address Format	5-41
5.13.3	Dynamic Routing Algorithms	5-21	5.23	Classful Addressing	5-42
5.14	Distance Vector Routing Algorithm	5-21	5.23.1	IPv4 Address Classes	5-42
5.14.1	Disadvantages	5-22	5.23.2	Formats of Various Address Classes ...	5-42
5.14.2	Looping in Distance Vector Routing Protocol	5-22	5.23.3	How to Recognize Address Classes ? ..	5-43
5.14.3	Count to Infinity Problem	5-23	5.23.4	Two Level Addressing	5-44
5.14.4	Split Horizon Algorithm	5-24	5.23.5	Extracting Information in a Block	5-44
5.15	Link State Routing	5-25	5.23.6	Network Address	5-44
5.15.1	Advantage of LSR	5-26	5.23.7	Network Mask or Default Mask	5-45
5.15.2	Comparison of Link State Routing and Distance Vector Routing	5-26	5.23.8	Default Masks for Different Classes	5-45
5.16	Least Cost Algorithms	5-26	5.23.9	Finding Network Address using Default Mask	5-46
5.16.1	Dijkstra's Algorithm	5-27	5.23.10	Three Level Addressing Subnetting	5-46
5.17	Path Vector Routing	5-31	5.23.11	Special IP Addresses	5-47
5.17.1	Path Vector Messages	5-31	5.23.12	Limitations of IPv4	5-47
5.17.2	Loop Prevention	5-32	5.23.13	Classless Addressing	5-48
5.17.3	Path Attributes	5-32	5.23.14	Supernetting	5-48
5.18	Unicast Routing Protocols	5-32			

5.23.15 Registered and Unregistered Addresses	5-48	5.29 IPv6 Addressing	5-69
5.23.16 Solved Examples	5-49	5.29.1 IPv6 Address	5-69
5.24 Classless Addressing in IPv4	5-52	5.29.2 Notations	5-69
5.24.1 Variable Length Blocks	5-52	5.29.3 Abbreviation	5-70
5.24.2 The Slash Notation (CIDR Notation)	5-53	5.30 IPv6 Packet Format	5-71
5.24.3 Network Mask	5-53	5.30.1 Payload	5-71
5.24.4 Extracting the Block Information	5-54	5.30.2 NAT – Network Address Translation	5-72
5.24.5 Block Allocation	5-55	5.30.3 Extension Headers	5-73
5.24.6 Relation to Classful Addressing	5-56	5.31 Transition from IPv4 to IPv6	5-73
5.24.7 Subnetting	5-56	5.31.1 Transition Strategies	5-74
5.24.8 Designing Subnets	5-56	5.31.2 Use of IP Addresses	5-75
5.24.9 Finding Information about Each Network	5-56	5.32 Comparison between IPv4 and IPv6	5-75
5.24.10 Address Aggregation	5-57	• Review Questions	5-76
5.25 Special Addresses	5-60	Module 4	
5.25.1 Special Blocks	5-60	Chapter 6 : Network Layer Protocols 6-1 to 6-30	
5.25.2 All Zeros Address	5-60	Syllabus : Routing protocols : RIP, OSPF, BGP and EIGRP. Introduction to ICMP, ARP, RARP. Quality of service.	
5.25.3 All one Address-Limited Broadcast Address	5-60	6.1 Network Layer Protocols	6-2
5.25.4 Loopback Address	5-60	6.1.1 Why IP Address ?	6-2
5.25.5 Private Addresses	5-60	6.2 ARP (Address Resolution Protocol)	6-3
5.25.6 Multicast Addresses	5-60	6.2.1 Mapping of IP Address into a MAC Address	6-3
5.25.7 Special Addresses in Each Block	5-60	6.2.2 ARP Operation	6-3
5.25.8 Network Address	5-61	6.2.3 Mapping Physical Address to Logical Address	6-4
5.25.9 Direct Broadcast Address	5-61	6.2.4 ARP Cache Memory	6-4
5.26 Internet Protocol Version 4 (IPv4)	5-61	6.2.5 ARP Packet Format	6-4
5.26.1 Position of IP	5-61	6.2.6 Encapsulation	6-5
5.26.2 Internet Protocol (IP)	5-61	6.2.7 Operation of ARP on Internet	6-5
5.26.3 Various Network Layer Protocols	5-62	6.3 The Reverse Address Resolution RARP) Protocol	6-6
5.26.4 IPv4 Header Format	5-62	6.4 ICMPv4	6-6
5.27 Fragmentation	5-66	6.4.1 ICMP Encapsulation	6-6
5.27.1 Transparent Strategy	5-67	6.4.2 ICMP Messages	6-7
5.27.2 Non-transparent Strategy	5-67	6.4.3 Message Format	6-7
5.27.3 Maximum Transfer Unit (MTU)	5-68	6.5 Error Reporting Messages in ICMPv4	6-7
5.27.4 Fields Related to Fragmentation	5-68		
5.28 IPv6 (Next Generation IP)	5-68		
5.28.1 Advantages of IPv6	5-69		

6.5.1	General Format of Error Reporting Messages	6-8	6.11.3	Encapsulation	6-23
6.5.2	Destination Unreachable	6-8	6.11.4	How does BGP Solve the Count to Infinity Problem ?.....	6-23
6.5.3	Source Quench Error Message	6-9	6.12	Interior Gateway Routing Protocol (IGRP)	6-23
6.5.4	Time Exceeded Error Message	6-9	6.12.1	Characteristics of IGRP Protocol	6-23
6.5.5	Parameter Problem Error Message	6-10	6.12.2	Stability Features of IGRP	6-24
6.5.6	Redirection Error Message	6-10	6.12.3	IGRP Timers	6-24
6.6	Query Messages (ICMPv4)	6-11	6.13	Enhanced IGRP (EIGRP)	6-24
6.6.1	Echo Request and Reply	6-11	6.13.1	Features of Enhanced IGRP (EIGRP)...	6-24
6.6.2	Timestamp Request and Reply	6-12	6.13.2	Enhanced IGRP Technologies	6-24
6.6.3	Deprecated Messages	6-12	6.13.3	Routing Concepts in EIGRP	6-25
6.6.4	Checksum	6-13	6.13.4	Packet Types in Enhanced IGRP	6-26
6.7	Routing Protocols	6-13	6.13.5	Comparison between IGRP and EIGRP	6-26
6.7.1	Unicast Routing Protocols	6-13	6.14	Quality of Service (QoS)	6-27
6.8	RIP (Routing Information Protocol)	6-13	6.14.1	Techniques for Achieving Good QoS ...	6-27
6.8.1	RIP Updating Algorithm	6-14	6.14.2	Traffic Shaping	6-27
6.8.2	Initializing the Routing Table	6-14	6.14.3	Leaky Bucket Algorithm	6-28
6.8.3	Updating the Routing Table	6-14	6.14.4	Token Bucket Algorithm	6-29
6.8.4	RIP Operation	6-14	6.14.5	Combination of Token Bucket and Leaky Bucket	6-29
6.8.5	RIP Message Format	6-15	6.14.6	Resource Reservation	6-30
6.8.6	Request Message	6-15	6.14.7	Admission Control	6-30
6.8.7	Response Message	6-16		• Review Questions	6-30
6.8.8	Timers in RIP	6-16			
6.9	OSPF	6-16			
6.9.1	Features of OSPF	6-18			
6.9.2	Metric	6-19			
6.9.3	Types of Links	6-19			
6.9.4	Virtual Link	6-20			
6.9.5	OSPF Packet Types	6-20			
6.9.6	Comparison between RIP and OSPF ...	6-21			
6.10	Border Gateway Protocol (BGP)	6-21			
6.10.1	Types of Autonomous Systems	6-21			
6.10.2	CIDR	6-22			
6.10.3	Path Attributes	6-22			
6.10.4	Types of Attributes	6-22			
6.11	BGP Sessions	6-22			
6.11.1	External and Internal BGP	6-22			
6.11.2	Types of Messages	6-22			

Module 5

Chapter 7 : Transport Layer

7-1 to 7-48

Syllabus : Connectionless and Connection-oriented services at transport layer, **Transmission Control Protocol (TCP)** : TCP services, TCP segment, TCP three way handshake, User Datagram Protocol (UDP), UDP services, UDP datagram, TCP and UDP checksum calculation, Flow control, Error control and Congestion control.

7.1	Introduction	7-2
7.2	Transport Layer Duties	7-2
7.3	Transport Layer Services	7-3
7.3.1	Process-to-Process Communication	7-3
7.3.2	Addressing Port Number	7-3
7.3.3	Encapsulation and Decapsulation	7-4

7.3.4	Multiplexing and Demultiplexing	7-5	7.12.1	Process to Process Communication	7-24
7.3.5	Flow Control	7-5	7.12.2	Stream Delivery Service	7-24
7.3.6	Flow Control at Transport Layer	7-6	7.12.3	Sending and Receiving Buffers	7-24
7.3.7	Error Control	7-7	7.12.4	Bytes and Segments	7-25
7.3.8	Combination of Flow and Error Control	7-8	7.12.5	Full Duplex Service	7-25
7.3.9	Connectionless and Connection Oriented Services (CLTS & COTS)	7-9	7.12.6	Connection Oriented Service	7-25
7.3.10	Quality of Service (QoS)	7-11	7.12.7	Reliable Service	7-25
7.4	Transport Service Primitives	7-11	7.13	Features of TCP	7-25
7.5	Sockets	7-12	7.13.1	Numbering System	7-25
7.5.1	Socket Types	7-13	7.13.2	Flow Control	7-26
7.5.2	Berkeley Sockets	7-13	7.13.3	Error Control	7-26
7.6	Elements of Transport Protocols	7-14	7.13.4	Congestion Control	7-26
7.7	Connection Management	7-15	7.14	The TCP Protocol	7-26
7.7.1	Connection Establishment	7-15	7.14.1	TCP Segment	7-27
7.7.2	Three Way Handshake Technique	7-15	7.14.2	The TCP Segment Header	7-27
7.7.3	Connection Release	7-16	7.14.3	Checksum	7-29
7.7.4	The Internet Transport Protocols (TCP and UDP)	7-17	7.14.4	Encapsulation	7-29
7.8	User Datagram Protocol (UDP)	7-17	7.15	A TCP Connection	7-29
7.8.1	Responsibilities of UDP	7-18	7.15.1	TCP Connection Establishment	7-30
7.8.2	Advantages of UDP	7-18	7.15.2	Connection Termination Protocol [Connection Release]	7-30
7.8.3	User Datagram	7-18	7.15.3	TCP Connection Management	7-31
7.8.4	UDP Pseudo Header	7-19	7.15.4	TCP Connection Release	7-32
7.9	UDP Services	7-20	7.16	TCP State Transition Diagram	7-32
7.9.1	Process to Process Communication	7-20	7.17	Windows in TCP	7-33
7.9.2	Connectionless Services	7-21	7.17.1	Send Window	7-33
7.9.3	Flow and Error Control	7-21	7.17.2	Receive Window	7-34
7.9.4	Checksum	7-21	7.18	Flow Control in TCP	7-34
7.9.5	Congestion Control	7-21	7.18.1	Opening and Closing Windows	7-35
7.9.6	Encapsulation and Decapsulation	7-21	7.18.2	Shrinking of Windows	7-36
7.9.7	Queuing	7-22	7.18.3	An Example of Flow Control	7-36
7.9.8	Multiplexing and Demultiplexing	7-22	7.18.4	Silly Window Syndrome	7-37
7.9.9	UDP Features	7-23	7.18.5	Nagle's Algorithm	7-37
7.10	UDP Applications	7-23	7.19	TCP Congestion Control	7-37
7.11	Transmission Control Protocol (TCP).....	7-23	7.19.1	Slow Start Algorithm	7-39
7.12	TCP Services	7-24	7.20	TCP Timer Management	7-39
			7.20.1	Other Timers in TCP	7-40
			7.21	Comparison of UDP and TCP	7-41

7.22	Socket Programming	7-42	8.8.2	Country Domain	8-10
7.22.1	Socket Programming with TCP	7-42	8.8.3	Inverse Domain	8-10
7.22.2	Socket Programming with UDP	7-43	8.9	Name Address Resolution	8-10
7.23	Performance	7-44	8.9.1	Recursive Resolution	8-10
7.23.1	Bandwidth	7-44	8.9.2	Iterative Resolution	8-10
7.23.2	Throughput (T)	7-45	8.9.3	The DNS Message Format	8-11
7.23.3	Latency (Delay)	7-45	8.9.4	Caching	8-12
7.23.4	Jitter	7-46	8.9.5	DNS Records	8-12
7.23.5	Difference between Delay and Jitter	7-46	8.10	World Wide Web (WWW)	8-13
7.23.6	Bandwidth Delay Product	7-46	8.10.1	Web from the Users Side	8-13
	• Review Questions	7-47	8.10.2	Web from the Servers Side	8-15
Module 6					
Chapter 8 : Application Layer			8-1 to 8-44		
Syllabus : Introduction to Application Layer Protocols : HTTP, FTP, DNS, SMTP, TELNET, SSH, DHCP.					
8.1	Introduction.....	8-2	8.11	Web Documents	8-17
8.1.1	Position of Application Layer	8-2	8.11.1	Static Documents	8-17
8.2	Providing Services	8-2	8.11.2	HTML (Hypertext Markup Language) ...	8-17
8.2.1	Standard and Non-standard Protocols ...	8-3	8.11.3	Dynamic Document	8-18
8.3	Application Layer Paradigms	8-3	8.11.4	Common Gateway Interface (CGI)	8-18
8.3.1	Traditional Paradigm Client Server	8-3	8.11.5	Active Documents	8-18
8.3.2	New Paradigm Peer-to-Peer (P2P)	8-4	8.12	HTTP (Hypertext Transfer Protocol)	8-19
8.3.3	Mixed Paradigm	8-5	8.12.1	Principle of HTTP Operation	8-19
8.4	Client Server Paradigm	8-5	8.12.2	The Web and HTTP	8-19
8.4.1	Application Programming Interface (API)	8-5	8.12.3	Non-persistent and Persistent Connection	8-20
8.4.2	Types of APIs	8-5	8.12.4	HTTP Messages	8-21
8.5	Domain Name System (DNS)	8-6	8.13	Proxy Server	8-21
8.5.1	How does DNS Work ?	8-6	8.13.1	HTTP Security	8-22
8.5.2	Name Space	8-6	8.14	Electronic Mail	8-22
8.5.3	Flat Name Space	8-6	8.14.1	E-mail Architecture and Services	8-22
8.5.4	Hierarchical Name Space	8-6	8.14.2	Message Formats	8-23
8.6	Domain Name Space	8-7	8.15	Message Transfer Agent SMTP	8-24
8.7	Distribution of Name Space	8-8	8.15.1	Commands and Responses	8-25
8.7.1	Hierarchy of Name Servers	8-8	8.15.2	SMTP (Simple Mail Transfer Protocol)	8-25
8.8	DNS in the Internet	8-9	8.15.3	Components of E-mail System	8-26
8.8.1	Generic Domains	8-9			

8.15.4	SMTP Commands	8-26	8.20.1	Previously used Protocols	8-34
8.15.5	SMTP Operation	8-26	8.20.2	DHCP	8-34
8.15.6	Comparison of HTTP and SMTP	8-27	8.20.3	Advantages of DHCP	8-35
8.16	Message Access Agent POP and IMAP	8-27	8.20.4	Components of DHCP	8-35
8.16.1	POP 3	8-27	8.20.5	DHCP Operation	8-36
8.16.2	IMAP4	8-28	8.20.6	DHCP Operation on Different Networks	8-36
8.17	File Transfer Protocol (FTP)	8-28	8.20.7	UDP Ports	8-37
8.17.1	Communication in FTP	8-29	8.20.8	Using TFTP	8-37
8.17.2	File Types	8-30	8.20.9	Error Control	8-37
8.17.3	Data Structure	8-30	8.20.10	Optimizations in DHCP	8-38
8.17.4	Transmission Mode	8-30	8.20.11	Packet Format	8-38
8.17.5	File Transfer	8-30	8.21	Configuration of DHCP	8-39
8.18	Remote Login TELNET and SSH	8-30	8.21.1	Static Address Allocation	8-40
8.18.1	TELNET	8-31	8.21.2	Dynamic Address Allocation	8-40
8.18.2	Network Virtual Terminal (NVT)	8-32	8.21.3	Transition States	8-40
8.18.3	Security Problems of TELNET	8-32	8.21.3.1	Address Acquisition States	8-40
8.19	Secure Shell (SSH)	8-32	8.21.3.2	Early Lease Termination	8-41
8.19.1	Port Forwarding	8-33	8.21.3.3	Lease Renewal States	8-41
8.19.2	SSH Packet Format	8-33		• Review Questions	8-42
8.19.3	Comparison of TELNET and SSH	8-33			
8.20	Host Configuration DHCP	8-34
