Computer Communication Networks

(Code : ELC603)

Semester VI – Electronics Engineering
(Mumbai University)

Strictly as per New Choice Based Credit and Grading System Syllabus
(Revise 2019 'C' Scheme) of Mumbai University with effective from Academic Year 2021-2022

J. S. Katre

M.E. (Electronics and Telecommunication)

Formerly, Assistant Professor

Department of Electronics Engineering

Vishwakarma Institute of Technology (V.I.T.), Pune.

Maharashtra, India

[ELC603] (FID : ME199) (Book Code : ME199A)

We dedicate this Publication soulfully and wholeheartedly,

in loving memory of our beloved founder director,

Late Shri. Pradeepji Lalchandji Lunawat,

who will always be an inspiration, a positive force and strong support

behind us.

"My work is my prayer to God"

- Lt. Shri. Pradeepji L. Lunawat

Soulful Tribute and Gratitude for all Your
Sacrifices, Hardwork and 40 years of Strong Vision…

Syllabus…

Computer Communication Networks : Sem. VI (Electronics Engineering, (MU))

Course Code	Course Name	Teaching Scheme (Hrs.)			Credits Assigned			
		Theory	Practical	Tutorial	Theory	Practical	Tut.	Total
ELC603	Computer Comm. Networks	03	–	–	03	–	–	03

Course Code	Course Name	Examination Scheme							
		Theory Marks				Term Work	Practical	Oral	Total
		Internal Assessment			End Sem. Exam.				
		Test 1	Test 2	Ave. of Test 1 and Test 2					
ELC603	Computer Comm. Networks	20	20	20	80	03	—	—	100

Course pre-requisite :

ELC 404 : Principles of Communication Engineering

ELC 504 : Digital Communication

Course Objectives :

– The objectives of this course are to :

1. Introduce networking architecture and protocols.
2. Understand the various layers and protocols in the TCP/IP model.
3. Recognize different addressing schemes, connecting devices and routing protocols.
4. Select the required protocol from the application layer protocols.

Course Objectives :

– On successful completion of the course the students will be able to :

1. Demonstrate understanding of networking concepts and required protocols.
2. Analyze the various layers and protocols of the layered architecture.
3. Evaluate different addressing schemes, connecting devices and routing protocols.
4. Analyze various routing protocols in Network layer.
5. Understand the various protocols in Transport layer.
6. Comprehend the different protocols in application layer.

(Book Code : ME199A)

Module 1

Introduction to Network Architectures, Protocol Layers, and Service models :

Introduction to computer networks and it's uses. LAN, MAN, WAN, Network topologies, **Addressing :** Physical / Logical / Port addressing, Protocols and Standards. **Protocol Architecture :** Need of layered protocol architecture, Layers details of OSI, Protocol layers and Their service models. **TCP / IP Model :** Protocol suite, Comparison of OSI and TCP / IP. **(Refer Chapter 1)**

Module 2

Physical Layer :

Transmission Media : Guided media like coaxial, Fiber, Twisted pair and Wireless media, Transmission impairments. **Interconnecting Devices :** Hub, Bridges, Switches, Router, Gateway. **Introduction to LAN :** LAN protocol architecture. **Traditional Ethernet and IEEE 802.3 LAN Standard :** Ethernet protocol, Frame structure, **Physical layers :** LLC, MAC layers. **Multiplexing :** Synchronous TDM, Statistical TDM, ADSL. **(Refer Chapters 2 and 3)**

Module 3

Data Link Control :

Data link services : Framing, Flow control, Error control, ARQ methods, Piggybacking**, High Level Data Link Control (HDLC) :** HDLC configurations, Frame formats, Typical frame exchanges. **Medium Access Control Protocols :** ALOHA, Slotted ALOHA, CSMA, CSMA/CD. **(Refer Chapters 4 and 5)**

Module 4

Network Layer :

Switching : Switched communication networks, Circuit switching networks, **Circuit Switching Concepts :** Crossbar switch, Time Slot Interchange (TSI), TDM bus switching, **Packet switching principles :** Virtual circuit switching and Datagram switching**, Routing in Packet Switching Networks :** Characteristics, Routing strategies, Link state routing, Distance vector routing. **Least-Cost Routing Algorithms :** Dijkstra's algorithm, Bellman Ford algorithm.

Internet protocol :

Principles of Internetworking : Requirements, Connectionless operation, **Internet Protocol Operation :** IP packet, **IP addressing :** Classful and Classless, Subnet and Supernet addressing, IPv4, IPv6 (IPv6 Datagram format, Comparison with IPv4 and Transition from IPv4 to IPv6). **(Refer Chapters 6 and 7)**

Module 5

Transport Layer :

Connection-oriented Transport Protocol Mechanisms : Transmission Control Protocol (TCP) : TCP services, TCP header format, TCP three way handshake, TCP state transition diagram. **Connectionless transport mechanisms :** User Datagram Protocol (UDP) – header. **Congestion :** Effects of congestion, Congestion control methods, Congestion control in packet switching networks. **(Refer Chapter 8)**

Module 6

Application Layer :

HTTP, FTP, DNS, SMTP, Internet Telephony and Streaming Multimedia. **(Refer Chapter 9)**

❑❑❑

(Book Code : ME199A)

Module 1

Chapter 1 : Introduction **1-1 to 1-48**

Syllabus : Introduction to computer networks and it's uses. LAN, MAN, WAN, Network topologies, **Addressing :** Physical / Logical / Port addressing, Protocols and Standards. **Protocol Architecture :** Need of layered protocol architecture, Layers details of OSI, Protocol layers and Their service models. **TCP / IP Model :** Protocol suite, Comparison of OSI and TCP / IP.

1.1 Introduction 1-2
- 1.1.1 Computer Networks 1-2
- 1.1.2 Hardware and Software 1-2
- 1.1.3 Protocol 1-2
- 1.1.4 Components of a Computer Network 1-3
- 1.1.5 Applications of Computer Networks 1-3

1.2 Benefits of Computer Networks 1-3
- 1.2.1 Disadvantages of Networks 1-3

1.3 Network Services / Applications 1-3
- 1.3.1 Service Provided to Organizations 1-3
- 1.3.2 Services Provided to People 1-4

1.4 Network Topology 1-4
- 1.4.1 Bus Topology 1-5
- 1.4.2 Ring Topology 1-6
- 1.4.3 Star Topology 1-8
- 1.4.4 Mesh Topology 1-9
- 1.4.5 Tree Topology 1-10
- 1.4.6 Logical Topology 1-10
- 1.4.7 Hybrid Topology 1-10
- 1.4.8 Comparison of Star, Bus and Ring Topologies 1-11
- 1.4.9 Comparison of Tree and Mesh Topologies 1-11

1.5 Types of Communication 1-11

1.6 Network Hardware 1-12
- 1.6.1 Transmission Technology 1-12
- 1.6.2 Network Scale 1-12

1.7 Network Classification by their Geography 1-13
- 1.7.1 Local Area Networks (LAN) 1-13
- 1.7.2 Metropolitan Area Network (MAN) 1-14
- 1.7.3 Wide Area Network (WAN) 1-14
- 1.7.4 Wireless Networks 1-15
- 1.7.5 Internetworks 1-15
- 1.7.6 Comparison of LAN, WAN and MAN ... 1-15

1.8 Network Classification Based on Architecture 1-16

1.9 Peer-to-Peer Networks 1-16
- 1.9.1 When to use Peer to Peer Networks ?.. 1-17

1.10 Client / Server Network 1-17
- 1.10.1 Communication in Client-Server Configuration 1-17
- 1.10.2 Comparison between Peer-to-Peer Network and Client-Server Network 1-18

1.11 Protocols and Standards 1-18
- 1.11.1 Protocols 1-18
- 1.11.2 Important Elements of a Protocol 1-19
- 1.11.3 Standards 1-19
- 1.11.4 Standard Organizations 1-19

1.12 Layered Tasks 1-20

1.13 Network Software 1-21
- 1.13.1 Protocol Hierarchies (Layered Architecture)..... 1-21
- 1.13.2 Reasons for having Layered Protocols and its Benefits 1-21
- 1.13.3 Disadvantages of Layered Architecture 1-22
- 1.13.4 How does Data Transfer take Place ? .. 1-22

1.14 Network Architecture 1-22
- 1.14.1 Virtual Communication between Layers 1-22

1.15 Design Issues for the Layers 1-23

1.16 Connection Oriented and Connectionless Services 1-24
- 1.16.1 Examples of C.O. and C.L. Services ... 1-25
- 1.16.2 Comparison of C.O and C.L. Services 1-25

1.17 Interface and Services 1-26
1.17.1 Service 1-27
1.17.2 Protocol 1-27
1.18 Reference Models 1-27
1.19 OSI Model 1-27
1.19.1 Layered Architecture 1-27
1.19.2 Communication in OSI Model 1-28
1.19.3 Peer to Peer Processes 1-29
1.19.4 Organization of the Layers 1-29
1.19.5 Layer Details of OSI Model 1-30
1.19.6 Exchange of Information in OSI Model 1-32
1.19.7 Merits of OSI Reference Model 1-33
1.19.8 Demerits of OSI Model 1-33
1.20 The TCP / IP Reference Model 1-33
1.20.1 Introduction to TCP / IP 1-34
1.20.2 Layer Details of TCP/IP 1-34
1.20.3 Description of TCP/IP Model 1-34
1.20.4 Layered Architecture 1-35
1.20.5 Logical Connections in the TCP / IP 1-36
1.20.6 Data unit created by every layer 1-36
1.21 Detailed Description of Each Layer 1-37
1.21.1 TCP / IP Physical Layer 1-37
1.21.2 TCP / IP Data Link Layer 1-37
1.21.3 TCP / IP Network Layer 1-38
1.21.4 TCP / IP Transport Layer 1-39
1.21.5 TCP / IP Application Layer 1-40
1.22 Encapsulation and Decapsulation 1-40
1.22.1 Encapsulation at the Source Host 1-40
1.22.2 Decapsulation and Encapsulation at the Router 1-41
1.22.3 Decapsulation at the Destination Host 1-41
1.23 Addressing in TCP / IP 1-42
1.23.1 Merits of TCP / IP model 1-42
1.23.2 Demerits of TCP / IP Model 1-42
1.23.3 Hybrid (Internet) Reference Model 1-42
1.23.4 Comparison of Models 1-43
1.24 Addressing 1-43
1.24.1 MAC Address (Physical Address) 1-44
1.24.2 Logical Addresses (IP Addresses) 1-45
1.24.3 Port Address 1-45
1.24.4 Specific Addresses 1-45
1.25 Socket and Socket Address 1-46
1.25.1 Ports and Sockets 1-46
1.26 University Questions and Answers 1-48
- **Review Questions 1-47**

Module 2

Chapter 2 : Physical Layer 2-1 to 2-24

Syllabus : Transmission Media : Guided media like coaxial, Fiber, Twisted pair and Wireless media, Transmission impairments. **Interconnecting Devices :** Hub, Bridges, Switches, Router, Gateway.

2.1 Introduction to Physical Layer 2-2
2.1.1 Physical Layer Design Issues 2-2
2.1.2 Transmission Media and Physical Layer 2-2
2.2 Transmission Media 2-3
2.2.1 Classification of Transmission Media 2-3
2.2.2 Selection of Transmission Media 2-3
2.3 Types of Wired Media 2-3
2.4 Twisted Pair Cables 2-4
2.4.1 UTP (Unshielded Twisted Pair) 2-4
2.4.2 STP (Shielded Twisted Pair) 2-4
2.4.3 Categories of UTP 2-5
2.4.4 Comparison of Twisted Pair Cables 2-6
2.5 Co-axial Cables 2-6
2.6 Optical Fiber Cables 2-8
2.6.1 Characteristics of Optical Fiber Cables 2-8
2.6.2 Advantages of Optical Fibers 2-9
2.6.3 Disadvantages of Optical Fiber 2-9
2.6.4 Applications 2-9

2.6.5 Comparison of Wired Media 2-9
2.7 Wireless Media 2-10
2.8 EM Spectrum for Wireless Media 2-10
2.8.1 Communication Bands 2-10
2.8.2 The ISM Band 2-11
2.8.3 Infrared Signals 2-11
2.8.4 Visible Light 2-11
2.9 Types of Wireless Media 2-11
2.9.1 Radio Wave Transmission Systems 2-11
2.9.2 Microwave Transmission System 2-12
2.9.3 Use of Infrared Light as Medium 2-13
2.9.4 Advantages of Wireless Transmission 2-14
2.9.5 Disadvantages of Wireless Transmission 2-14
2.9.6 Comparison of Wired and Wireless Media 2-14
2.10 Transmission Impairments 2-14
2.10.1 Attenuation 2-14
2.10.2 Delay Distortion 2-15
2.10.3 Harmonic Distortion 2-15
2.10.4 Noise 2-16
2.10.5 Signal to Noise Ratio 2-17
2.11 Networking Devices 2-17
2.12 Hubs 2-18
2.12.1 Passive Hubs 2-19
2.12.2 Active Hubs 2-19
2.12.3 Intelligent Hubs 2-19
2.13 Repeaters 2-19
2.14 Bridges 2-20
2.15 Routers 2-21
2.16 Gateways 2-22
2.17 Switches 2-22
2.17.1 Comparison of Networking Devices 2-23
- **Review Questions 2-24**

Module 2

Chapter 3 : Local Area Networks 3-1 to 3-30

Syllabus : Introduction to LAN : LAN protocol architecture. **Traditional Ethernet and IEEE 802.3 LAN Standard :** Ethernet protocol, Frame structure, **Physical layers :** LLC, MAC layers. **Multiplexing :** Synchronous TDM, Statistical TDM, ADSL.

3.1 Introduction to LAN.....3-2
3.1.1 LAN Attributes 3-2
3.1.2 LAN Topologies 3-2
3.1.3 Transmission Media 3-2
3.1.4 Standards for LANs 3-2
3.1.5 General Concepts 3-2
3.1.6 Technological Ingredients 3-2
3.2 LAN Applications 3-2
3.2.1 Personal Computer LANs 3-2
3.2.2 Backend Networks and Storage Area Networks (SAN) 3-3
3.2.3 High Speed Office Networks 3-3
3.2.4 Backbone LANs 3-3
3.2.5 Types of Networks 3-4
3.3 LAN Architecture 3-4
3.3.1 Protocol Architecture 3-4
3.4 Ethernet 3-6
3.4.1 Traditional Ethernet 3-6
3.4.2 Bridged Ethernet 3-7
3.4.3 Switched Ethernet 3-7
3.4.4 Full Duplex Ethernet 3-7
3.4.5 Fast Ethernet 3-7
3.4.6 Gigabit Ethernet 3-7
3.5 IEEE Standards 3-7
3.6 Traditional Ethernet (IEEE 802.3) 3-8
3.6.1 Traditional Ethernet Frame 3-8
3.6.2 Frame Length 3-9
3.6.3 Addressing 3-9

3.6.4 Types of Addresses 3-9
3.6.5 Physical Properties of Ethernet 3-10
3.6.6 Physical Layer Implementation of Standard Ethernet 3-10
3.7 Fast Ethernet 3-11
3.7.1 Autonegotiation 3-12
3.7.2 Physical Layer Implementation 3-12
3.8 Gigabit Ethernet 3-12
3.8.1 MAC Sublayer 3-13
3.8.2 Physical Layer 3-14
3.8.3 Physical Layer Implementation 3-14
3.8.4 Ten Gigabit Ethernet 3-15
3.8.5 Comparison of Standard and Gigabit Ethernet 3-15
3.9 LAN Bridges 3-15
3.9.1 802 Bridges 3-16
3.9.2 Transparent Bridges 3-16
3.9.3 Source Routing Bridges 3-18
3.9.4 Remote Bridges 3-19
3.9.5 Looping Problem in Bridge LAN 3-19
3.10 Mixed Media Bridges 3-20
3.11 Introduction to Multiplexing 3-20
3.11.1 Types of Multiplexing 3-21
3.12 Synchronous Time Division Multiplexing 3-21
3.12.1 Advantages of TDM 3-22
3.12.2 Disadvantages of TDM 3-22
3.12.3 Applications of TDM 3-22
3.13 Statistical (Asynchronous) TDM 3-22
3.13.1 Data Rate of Statistical TDM 3-23
3.13.2 Slot Size 3-23
3.13.3 Bandwidth 3-23
3.13.4 Comparison of Synchronous TDM and Statistical TDM 3-23
3.14 Introduction to High Speed Digital Access 3-24
3.15 DSL Technology 3-24
3.16 ADSL 3-24
3.16.1 Use of Existing Local Loop 3-25
3.16.2 Adaptive Technology 3-25
3.16.3 Modulation Techniques 3-25
3.16.4 Discrete Multitone Technique (DMT) 3-25
3.16.5 ADSL Modem 3-26
3.16.6 DSLAM 3-26
3.17 xDSL (Other DSL Technologies) 3-26
3.17.1 RADSL 3-26
3.17.2 HDSL 3-27
3.17.3 SDSL 3-27
3.17.4 VDSL 3-28
3.17.5 Comparison of xDSL Schemes 3-28
3.18 University Questions and Answers 3-29
- **Review Questions 3-28**

Module 3

Chapter 4 : Data Link Control 4-1 to 4-42

Syllabus : Data link services : Framing, Flow control, Error control, ARQ methods, Piggybacking**, High Level Data Link Control (HDLC) :** HDLC configurations, Frame formats, Typical frame exchanges.

4.1 Introduction 4-2
4.1.1 Position of Data Link Layer 4-2
4.2 Data Link Layer Design Issues 4-2
4.3 Services Provided to Network Layer 4-3
4.3.1 Types of Services Provided 4-3
4.3.2 Unacknowledged Connectionless Service 4-3
4.3.3 Acknowledged Connectionless Service 4-3
4.3.4 Acknowledged Connection Oriented Service 4-4
4.4 Framing 4-4
4.4.1 Framing Methods 4-4
4.4.2 Character Count 4-4
4.4.3 Starting and Ending Character with Character Stuffing 4-4

4.4.4 Character Stuffing 4-5

4.4.5 Starting and Ending Flags, with Bit Stuffing....4-5

4.4.6 Physical Layer Coding Violations 4-6

4.5 Error Control 4-6

4.5.1 Function of a Timer 4-6

4.6 Error Detection and Correction 4-6

4.6.1 Encoding and Decoding 4-7

4.6.2 Redundancy 4-7

4.6.3 Classification of Error Control Techniques 4-7

4.6.4 Error Detection Methods 4-7

4.6.5 Parity Checking 4-8

4.6.6 Checksum Error Detection 4-9

4.6.7 Two Dimensional Parity Check (Block Parity) 4-9

4.6.8 Cyclic Redundancy Check (CRC) 4-10

4.6.9 CRC Checker 4-11

4.7 Error Correction 4-14

4.7.1 Classification of Error-correcting Codes 4-15

4.7.2 Linear Block Codes 4-15

4.7.3 Hamming Codes 4-15

4.7.4 ARQ Technique 4-18

4.8 Flow Control 4-19

4.9 Elementary Data Link Protocols 4-20

4.9.1 An Unrestricted Simplex Protocol 4-20

4.9.2 A Simplex Stop and Wait Protocol 4-20

4.9.3 A Simplex Protocol for Noisy Channel ..4-20

4.9.4 Piggybacking 4-21

4.10 Sliding Window Protocols 4-22

4.10.1 A One Bit Sliding Window Protocol (Stop and Wait ARQ) 4-24

4.10.2 A Protocol using GO Back n 4-27

4.10.3 Pipelining 4-28

4.10.4 Selective Repeat ARQ 4-29

4.10.5 Protocol Performance 4-30

4.10.6 Comparison of Sliding Window Protocols 4-30

4.11 High Level Data Link Control (HDLC) Protocol 4-33

4.11.1 Operating Modes for Data Transfer 4-34

4.11.2 Frame Structure in HDLC 4-34

4.11.3 Frame Types in HDLC 4-35

4.11.4 Transparency in HDLC 4-37

4.11.5 Bit Stuffing 4-37

4.11.6 HDLC Frame Exchanges 4-40

- **Review Questions 4-42**

Module 3

Chapter 5 : Medium Access Control Protocols **5-1 to 5-18**

Syllabus : Medium Access Control Protocols : ALOHA, Slotted ALOHA, CSMA, CSMA/CD.

5.1 Introduction 5-2

5.1.1 MAC and LLC Sublayers 5-2

5.2 The Channel Allocation Problem 5-2

5.2.1 Static Channel Allocation 5-3

5.2.2 Dynamic Channel Allocation 5-3

5.3 Multiple Access 5-4

5.3.1 Random Access 5-4

5.3.2 Evolution of Random Access Methods 5-4

5.3.3 Taxonomy (Classification) of Multiple Access Protocols 5-4

5.4 Multiple Access ALOHA System 5-5

5.4.1 Pure ALOHA 5-5

5.4.2 Efficiency of an ALOHA System 5-6

5.4.3 Slotted ALOHA 5-7

5.4.4 Comparison of Pure and Slotted ALOHA 5-8

5.5 Carrier Sense Multiple Access (CSMA) 5-9

5.5.1 Carrier Sense Multiple Access / Collision Detection (CSMA / CD) 5-9

5.5.2 CSMA / CD Procedure 5-10
5.5.3 CSMA / CA 5-11
5.6 Collision Free Protocols 5-13
5.7 Controlled Access 5-13
5.7.1 Reservation Systems 5-13
5.7.2 Polling 5-14
5.7.3 Token Passing 5-15
5.8 University Questions and Answers 5-16
• **Review Questions 5-16**

Module 4

Chapter 6 : Network Layer 6-1 to 6-50

Syllabus : Switched communication networks, Circuit switching networks, **Circuit Switching Concepts :** Crossbar switch, Time Slot Interchange (TSI), TDM bus switching, **Packet switching principles :** Virtual circuit switching and Datagram switching**, Routing in Packet Switching Networks :** Characteristics, Routing strategies, Link state routing, Distance vector routing. **Least-Cost Routing Algorithms :** Dijkstra's algorithm, Bellman Ford algorithm.

6.1 Switching 6-2
6.1.1 Switching Methods 6-2
6.1.2 Circuit Switching 6-2
6.1.3 Circuit Switched Technology in Telephone Networks 6-4
6.2 Structure of Switch 6-4
6.3 Circuit Switching Concepts 6-4
6.4 Types of Circuit Switches 6-5
6.4.1 Space-Division Switches 6-5
6.4.2 Time Division Switches 6-6
6.4.3 Time - Space - Time Switches 6-7
6.4.4 A 4 × 4 Time-Space-Time Switch 6-8
6.4.5 Comparison of Space Division and Time Division Switch 6-9
6.5 Packet Switching 6-10
6.5.1 Datagram Packet Switching 6-10
6.5.2 Efficiency 6-11
6.5.3 Delay 6-11
6.5.4 Advantages of Packet Switching 6-11
6.5.5 Disadvantages of Packet Switching 6-11
6.5.6 Datagram Networks in Internet 6-11
6.6 Virtual Circuit Packet Switching 6-12
6.6.1 Three Phases of Communication 6-12
6.6.2 Efficiency 6-13
6.6.3 Delay 6-13
6.6.4 Advantages of Virtual Circuit Packet Switching 6-13
6.6.5 Disadvantages of Virtual Circuit Packet Switching 6-13
6.7 Comparison of Message, Circuit and Packet Switching 6-13
6.8 Packet Switches 6-14
6.8.1 Input Port 6-14
6.8.2 Output Port 6-14
6.8.3 Routing Processor 6-14
6.8.4 Switching Fabrics 6-14
6.9 Network Layer 6-15
6.9.1 Network Layer Duties 6-15
6.10 Network Layer Design Issues 6-16
6.10.1 Store and Forward Packet Switching 6-16
6.10.2 Services Provided to the Transport Layer 6-17
6.10.3 Implementation of Connectionless Service 6-17
6.10.4 Implementation of Connection-Oriented Service 6-18
6.10.5 Internal Organization of the Network Layer 6-18
6.10.6 Comparison of Virtual Circuit and Datagram Subnets 6-19
6.11 Routing in Packet Switching Network 6-19
6.11.1 Characteristics 6-19
6.11.2 Performance Criteria 6-19
6.12 Routing 6-20

6.12.1 Types of Routing 6-20
6.12.2 Intra and Interdomain Routing 6-20
6.12.3 Unicast Routing 6-21
6.12.4 Broadcast Routing 6-21
6.12.5 Multicast Routing 6-22
6.13 Routing Algorithms 6-22
6.13.1 Desired Properties of a Routing Algorithm 6-23
6.13.2 Types of Routing Algorithms 6-23
6.13.3 Optimality Principle 6-23
6.14 Static Algorithms 6-23
6.14.1 Shortest Path Routing 6-23
6.14.2 Flooding 6-24
6.15 Dynamic Routing Algorithms 6-24
6.16 Distance Vector Routing Algorithm 6-24
6.16.1 Disadvantages 6-26
6.16.2 Looping in Distance Vector Routing Protocol 6-26
6.16.3 Count to Infinity Problem 6-27
6.16.4 Split Horizon Algorithm 6-28
6.17 Link State Routing 6-28
6.17.1 Advantage of LSR 6-29
6.17.2 Comparison of Link State Routing and Distance Vector Routing 6-29
6.17.3 Advantages and Disadvantages of Dynamic Routing 6-30
6.18 Least Cost Algorithms 6-30
6.18.1 Dijkstra's Algorithm 6-30
6.19 Bellman-Ford Algorithm 6-35
6.20 Path Vector Routing 6-41
6.20.1 Path Vector Messages 6-41
6.20.2 Loop Prevention 6-41
6.20.3 Path Attributes 6-41
6.21 Unicast Routing Protocols 6-42
6.21.1 Routing 6-42
6.21.2 Cost or Metric 6-42
6.21.3 Routing Tables 6-42
6.22 Network Layer Congestion 6-42
6.23 Congestion Control 6-43
6.23.1 Need of Congestion Control 6-43
6.23.2 Causes of Congestion 6-43
6.23.3 Difference between Congestion Control and Flow Control 6-44
6.23.4 Principle of Congestion Control 6-44
6.24 Congestion Prevention Policies 6-45
6.24.1 Congestion Control in Virtual Circuit Subnets 6-47
6.24.2 Approaches to Congestion Control 6-47
6.24.3 Congestion Control in Datagram Subnets 6-48
- **Review Questions 6-50**

Module 4

Chapter 7 : Internet Protocol 7-1 to 7-44

Syllabus : Principles of Internetworking : Requirements, Connectionless operation, **Internet Protocol Operation :** IP packet, **IP addressing :** Classful and Classless, Subnet and Supernet addressing, IPv4, IPv6 (IPv6 Datagram format, Comparison with IPv4 and Transition from IPv4 to IPv6).

7.1 Principle of Internetworking 7-2
7.1.1 Why Internetworking ? 7-2
7.1.2 The Problems in Internetworking 7-2
7.1.3 Dealing with Incompatibility Issue 7-2
7.1.4 Requirements of Internetworking 7-4
7.1.5 Differing Factors in Various Networks 7-4
7.1.6 Styles of Internetworking 7-4
7.1.7 Concatenated Virtual Circuits 7-4
7.1.8 Connectionless Internetworking 7-5
7.1.9 Comparison of Two Styles of Internetworking 7-6
7.1.10 Internet as a Connectionless Network 7-6
7.2 Network Layer Protocols 7-6

7.2.1 Why IP Address ? 7-7
7.2.2 Logical Addresses (IP Addresses) 7-7
7.3 Internet Protocol Version 4 (IPv4) 7-7
7.3.1 Position of IP 7-8
7.3.2 Internet Protocol (IP) 7-8
7.3.3 Various Network Layer Protocols 7-9
7.3.4 IPv4 Header Format 7-9
7.4 Fragmentation 7-13
7.4.1 Transparent Strategy 7-13
7.4.2 Non-transparent Strategy 7-14
7.4.3 Maximum Transfer Unit (MTU) 7-14
7.4.4 Fields Related to Fragmentation 7-15
7.5 IPv4 Addresses 7-15
7.5.1 Uniqueness of IP Addresses 7-15
7.5.2 Address Space 7-15
7.5.3 Notation 7-16
7.5.4 IPv4 Address Format 7-16
7.6 Classful Addressing 7-16
7.6.1 IPv4 Address Classes 7-16
7.6.2 Formats of Various Address Classes 7-17
7.6.3 How to Recognize Address Classes ? 7-17
7.6.4 Two Level Addressing 7-18
7.6.5 Extracting Information in a Block 7-18
7.6.6 Network Address 7-19
7.6.7 Network Mask or Default Mask 7-20
7.6.8 Default Masks for Different Classes 7-20
7.6.9 Finding Network Address using Default Mask 7-20
7.6.10 Three Level Addressing Subnetting 7-20
7.6.11 Special IP Addresses 7-21
7.6.12 Limitations of IPv4 7-22
7.6.13 Classless Addressing 7-22
7.6.14 Supernetting 7-23
7.6.15 Registered and Unregistered Addresses 7-23
7.6.16 Solved Examples 7-23
7.7 Classless Addressing in IPv4 7-27
7.7.1 Variable Length Blocks 7-27
7.7.2 The Slash Notation (CIDR Notation) 7-28
7.7.3 Network Mask 7-28
7.7.4 Extracting the Block Information 7-29
7.7.5 Block Allocation 7-32
7.7.6 Relation to Classful Addressing 7-32
7.7.7 Subnetting 7-32
7.7.8 Designing Subnets 7-33
7.7.9 Finding Information about Each Network 7-33
7.7.10 Address Aggregation 7-33
7.8 Special Addresses 7-35
7.8.1 Special Blocks 7-35
7.8.2 All Zeros Address 7-35
7.8.3 All one Address-Limited Broadcast Address 7-35
7.8.4 Loopback Address 7-35
7.8.5 Private Addresses 7-35
7.8.6 Multicast Addresses 7-35
7.8.7 Special Addresses in Each Block 7-36
7.8.8 Network Address 7-36
7.8.9 Direct Broadcast Address 7-36
7.8.10 Options 7-36
7.9 IPv6 (Next Generation IP) 7-37
7.9.1 Advantages of IPv6 7-37
7.10 IPv6 Addressing 7-37
7.10.1 IPv6 Address 7-37
7.10.2 Notations 7-37
7.10.3 Abbreviation 7-38
7.11 IPv6 Packet Format 7-39
7.11.1 Payload 7-39
7.11.2 NAT – Network Address Translation 7-40
7.11.3 Extension Headers 7-41

7.12 Transition from IPv4 to IPv6 7-41
7.12.1 Transition Strategies 7-42
7.12.2 Use of IP Addresses 7-42
7.13 Comparison between IPv4 and IPv6 7-43
7.14 Internet Control Protocols 7-44
• **Review Questions 7-44**

Module 5

Chapter 8 : Transport Layer 8-1 to 8-40

Syllabus : Connection-oriented Transport Protocol Mechanisms : Transmission Control Protocol (TCP) : TCP services, TCP header format, TCP three way handshake, TCP state transition diagram. **Connectionless transport mechanisms :** User Datagram Protocol (UDP) – header. **Congestion :** Effects of congestion, Congestion control methods, Congestion control in packet switching networks.

8.1 Introduction 8-2
8.2 Transport Layer Duties 8-2
8.3 Transport Layer Services 8-3
8.3.1 Process-to-Process Communication 8-3
8.3.2 Addressing Port Number 8-3
8.3.3 Encapsulation and Decapsulation 8-5
8.3.4 Multiplexing and Demultiplexing 8-5
8.3.5 Flow Control 8-5
8.3.6 Flow Control at Transport Layer 8-6
8.3.7 Error Control 8-7
8.3.8 Combination of Flow and Error Control ..8-8
8.3.9 Connectionless and Connection Oriented Services (CLTS & COTS) 8-9
8.3.10 Quality of Service (QoS) 8-10
8.4 Sockets 8-11
8.4.1 Socket Types 8-11
8.4.2 Berkeley Sockets 8-12
8.5 Elements of Transport Protocols 8-13
8.6 Connection Management 8-13
8.6.1 Connection Establishment 8-13
8.6.2 Three Way Handshake Technique 8-14
8.6.3 Connection Release 8-15
8.6.4 The Internet Transport Protocols 8-15
8.7 User Datagram Protocol (UDP) 8-15
8.7.1 Responsibilities of UDP 8-16
8.7.2 Advantages of UDP 8-16
8.7.3 User Datagram 8-16
8.7.4 UDP Pseudo Header 8-17
8.8 UDP Services 8-19
8.8.1 Process to Process Communication 8-19
8.8.2 Connectionless Services 8-20
8.8.3 Flow and Error Control 8-20
8.8.4 Checksum 8-20
8.8.5 Congestion Control 8-20
8.9 UDP Applications 8-20
8.10 Transmission Control Protocol (TCP).....8-21
8.10.1 Relationship Between TCP and IP 8-21
8.10.2 Ports and Sockets 8-22
8.11 TCP Services 8-22
8.11.1 Process to Process Communication 8-22
8.11.2 Stream Delivery Service 8-23
8.11.3 Sending and Receiving Buffers 8-23
8.11.4 Bytes and Segments 8-23
8.12 Features of TCP 8-24
8.12.1 Numbering System 8-24
8.12.2 Flow Control 8-24
8.12.3 Error Control.....8-24
8.12.4 Congestion Control 8-24
8.13 The TCP Protocol 8-25
8.13.1 TCP Segment 8-25
8.13.2 The TCP Segment Header 8-25
8.13.3 Checksum 8-27
8.13.4 Encapsulation 8-27
8.14 A TCP Connection 8-28
8.14.1 TCP Connection Establishment 8-28

8.14.2 Connection Termination Protocol 8-28
8.14.3 TCP Connection Management 8-29
8.14.4 TCP Connection Release 8-30
8.15 TCP State Transition Diagram 8-30
8.16 Flow Control in TCP.....8-31
8.16.1 Silly Window Syndrome 8-32
8.16.2 Nagle's Algorithm 8-32
8.17 Quality of Service (QoS) 8-33
8.17.1 Techniques for Achieving Good QoS ...8-33
8.17.2 Traffic Shaping 8-33
8.17.3 Leaky Bucket Algorithm 8-34
8.17.4 Token Bucket Algorithm 8-35
8.17.5 Combination of Token Bucket and Leaky Bucket 8-36
8.17.6 Resource Reservation 8-36
8.17.7 Admission Control 8-36
8.18 TCP Congestion Control 8-36
8.18.1 Slow Start Algorithm 8-37
8.18.2 Internet Congestion Control Algorithm .8-38
8.19 Comparison of UDP and TCP 8-39
- **Review Questions 8-39**

Module 6

Chapter 9 : Application Layer 9-1 to 9-34

Syllabus : HTTP, FTP, DNS, SMTP, Internet Telephony and Streaming Multimedia.

9.1 Introduction 9-2
9.1.1 Position of Application Layer 9-2
9.2 Providing Services 9-2
9.2.1 Standard and Non-standard Protocols ...9-3
9.3 Domain Name System (DNS) 9-3
9.3.1 How does DNS Work ? 9-3
9.3.2 Name Space 9-4
9.3.3 Flat Name Space 9-4
9.3.4 Hierarchical Name Space 9-4
9.4 Domain Name Space 9-4
9.5 Distribution of Name Space 9-5
9.5.1 Hierarchy of Name Servers 9-6
9.6 DNS in the Internet 9-7
9.6.1 Generic Domains 9-7
9.6.2 Country Domain 9-7
9.6.3 Inverse Domain 9-7
9.7 Name Address Resolution 9-7
9.7.1 Recursive Resolution 9-8
9.7.2 Iterative Resolution 9-8
9.7.3 The DNS Message Format 9-9
9.7.4 Caching 9-9
9.7.5 DNS Records 9-9
9.8 HTTP (Hypertext Transfer Protocol) 9-10
9.8.1 Principle of HTTP Operation 9-11
9.8.2 The Web and HTTP 9-11
9.8.3 Non-persistent and Persistent Connection 9-11
9.8.4 HTTP Messages 9-13
9.8.5 HTTP Security 9-13
9.9 Electronic Mail 9-13
9.9.1 E-mail Architecture and Services 9-13
9.9.2 Message Formats 9-14
9.10 Message Transfer Agent SMTP 9-16
9.10.1 Commands and Responses 9-16
9.10.2 SMTP (Simple Mail Transfer Protocol) 9-16
9.10.3 Components of E-mail System 9-17
9.10.4 SMTP Commands 9-17
9.10.5 SMTP Operation 9-17
9.10.6 Comparison of HTTP and SMTP 9-18
9.11 File Transfer Protocol (FTP) 9-18
9.11.1 Communication in FTP.....9-19
9.11.2 File Types 9-19
9.11.3 Data Structure 9-19
9.11.4 Transmission Mode 9-20

9.11.5 File Transfer 9-20
9.12 Internet Telephony / Voice Over IP 9-20
9.13 SIP (Session Initiation Protocol) 9-20
9.13.1 SIP Messages 9-20
9.13.2 SIP Addresses 9-21
9.13.3 Simple SIP Session 9-21
9.13.4 Tracking the Celle 9-21
9.14 H.323 9-22
9.14.1 Protocol 9-22
9.14.2 Comparison of H.323 and SIP 9-23
9.15 Multimedia 9-24
9.16 Examples of Multimedia Applications 9-24
9.16.1 Streaming Stored Audio and Video 9-25
9.16.2 Streaming Live Audio and Video 9-25
9.16.3 Real Time Interactive Audio and Video 9-25
9.16.4 Problems for Multimedia in Today's Internet 9-26
9.16.5 Expectations of Multimedia from the Internet 9-26
9.17 Audio / Video Streaming 9-28
9.17.1 Functions Performed by Media Players 9-29
9.17.2 Accessing Audio and Video through a Web Server 9-29
9.18 Streaming Stored Audio / Video 9-30
9.18.1 Using a Web Server 9-30
9.18.2 Using a Web Server with a Metafile 9-30
9.18.3 Using a Media Server 9-31
9.18.4 Using a Media Server and RTSP 9-32
9.19 Streaming Live Audio and Video 9-32
9.20 Real Time Interactive Audio and Video 9-32
- **Review Questions 9-33**
