Module I

Chapter 1 : Introduction to Microcontroller **1.1 to 1-26**

1.1 Introduction 1-1

1.2 Comparison of CISC and RISC Processors 1-1

1.3 Harvard and Von Neumann Architectures 1-2

1.3.1 Harvard Architecture of PIC Microcontroller 1-2

1.4 Features of PIC Family of Microcontrollers : Overview of PIC Microcontroller Family 12FXX, 16FXX and 18FXX 1-3

1.4.1 PIC Microcontroller Features 1-3

1.5 Comparison of Features of PIC10, PIC12, PIC16, PIC18 Families 1-4

1.6 PIC18F458 Features 1-5

1.7 Pin Diagram of PIC18F458 1-7

1.8 Architecture of PIC18F458 (Block Diagram) 1-7

1.8.1 Program Memory 1-8

1.8.2 31 Level Stack 1-9

1.8.3 Data RAM 1-9

1.8.4 Arithmetic and Logic Unit (ALU) 1-9

1.8.5 CPU Registers 1-9

1.8.5(A) Working Register (WREG) 1-9

1.8.5(B) Status Register 1-9

1.8.5(C) Program Counter and PCLATH 1-10

1.8.5(D) Stack 1-10

1.8.5(E) INDF and FSR 1-10

1.8.6 8×8 Multiply Unit 1-11

1.8.7 Five I/O (Ports A, B, C, D, E) 1-11

1.8.8 Four Timers (Timer0 to Timer3) 1-11

1.8.8(A) Applications of Timer in PIC18F 1-12

1.8.9 Analog to Digital Convertor (ADC) 1-12

1.8.10 Analog Comparator 1-12

1.8.11 Master Synchronous Serial Port (MSSP) 1-13

1.8.11(A) Serial Peripheral Interface (SPI) Mode 1-13

1.8.11(B) I^2C (Inter Integrated Circuit) Mode 1-13

1.8.12 USART Ports 1-13

1.8.13 Interrupt and its Handling in PIC18F 1-13

1.9 Oscillator Configurations 1-14

1.9.1 HS, HS4, XT or LP Oscillator 1-15

1.9.2 RC Oscillator Mode 1-16

1.9.3 EC and ECIO Oscillator Modes 1-16

1.9.4 Instruction Cycle 1-17

1.10 PIC18 RESET 1-17

1.10.1 Power-on Reset (POR) 1-18

1.10.2 MCLR 1-18

1.10.3 Power-up Timer (PWRT) 1-19

1.10.4 Oscillator Start-up Timer (OST) 1-19

1.10.5 PLL Lock Time-out 1-19

1.10.6 Brown-out Reset (BOR) 1-19

1.10.7 Time-out Sequence 1-19

1.10.8 Reset at Supply Voltage Drop below the Permissible (Brown-out Reset) 1-19

1.10.9 Watchdog Timer 1-20

1.11 Program and Data Memory Organization 1-20

1.11.1 Data Memory 1-21

1.11.1(A) Bank Select Register (BSR) 1-22

1.11.1(B) Special Function Registers (SFR) 1-22

1.11.2 Program Memory Organization 1-23

1.12 Pipelining 1-24

1.13 Power- Down Mode (Sleep) 1-25

1.13.1 Wake-Up from Sleep 1-26

Module II

Chapter 2 : PIC 18 Assembly Language Programming **2-1 to 2-56**

2.1 Addressing Modes for PIC18 Microcontroller 2-1

2.1.1 Register Direct 2-1

2.1.2 Immediate Mode 2-2

2.1.3 Inherent Mode 2-2

2.1.4 Indirect Mode 2-2

2.1.5 Bit-Direct Addressing Mode 2-4

2.2 Instruction Set 2-4

2.3 Data Transfer Instructions 2-7

2.3.1 MOVF or MOVE MOVF f,d,a 2-7

2.3.2 MOVFF 2-7

2.3.3 MOVLB 2-8

2.3.4 MOVLW K 2-8

2.3.5 MOVWF 2-8

2.3.6 SWAPF 2-8

2.3.7 LFSR 2-9

2.3.8 PUSH 2-9

2.3.9 POP 2-9

2.3.10 CLRF 2-10

2.3.11 SETF 2-10

2.4 Arithmetic Instructions 2-10

2.4.1 ADDLW 2-10

2.4.2 ADDWF 2-10

2.4.3 ADDWFC 2-11

2.4.4 DAW 2-11

2.4.5 SUBLW 2-11

2.4.6 SUBWF 2-12

2.4.7 SUBWFB 2-13

2.4.8 SUBFWB 2-13

2.4.9 INCF 2-14

2.4.10 INCFSZ 2-14

2.4.11 INCFSNZ 2-14

2.4.12 DECF 2-15

2.4.13 DECFSZ 2-15

2.4.14 DECFSNZ 2-15

2.4.15. MULLW 2-16

2.4.16 MULWF 2-16

2.5 Logical Instructions 2-17

2.5.1 ANDLW 2-17

2.5.2 ANDWF 2-17

2.5.3 IORLW 2-17

2.5.4 IORWF 2-17

2.5.5 XORLW 2-18

2.5.6 XORWF 2-18

2.5.7 COMF 2-18

2.5.8 NEGF 2-18

2.5.9 CPFSEQ 2-19

2.5.10 CPFSGT 2-19

2.5.11 CPFSLT 2-19

2.5.12 TSTFSZ 2-20

2.6 Rotate Instructions 2-20

2.6.1 RLCF 2-20

2.6.2 RLNCF 2-21

2.6.3 RRCF 2-21

2.6.4 RRNCF 2-21

2.7 Branch Instructions 2-21

2.7.1 BC 2-22

2.7.2 BN 2-22

2.7.3 BNC 2-22

2.7.4 BNN 2-22

2.7.5 BNOV 2-23

2.7.6 BNZ 2-23

2.7.7 BOV 2-23

2.7.8 BRA 2-24

2.7.9 GOTO 2-24

2.7.10 BZ 2-24

2.8 CALL and RETURN Instructions 2-24

2.8.1 CALL 2-24

2.8.2 RCALL 2-25

2.8.3 RETURN 2-25

2.8.4 RETFIE 2-25

2.8.5 RETLW 2-26

2.9 Table Read/Write Instructions 2-26

2.9.1 TBLRD* 2-26

2.9.2 TBLRD*+ 2-27

2.9.3 TBLRD*– 2-27

2.9.4 TBLRD+* 2-28

2.9.5 TBLWT* 2-28

2.9.6 TBLWT*+ 2-29

2.9.7 TBLWT*– 2-29

2.9.8 TBLWT+* 2-30

2.10 Machine Control Instructions 2-30

2.10.1 CLRWDT 2-30

2.10.2 NOP 2-31

2.10.3 SLEEP 2-31

2.10.4 RESET 2-31

2.11 Bit Addressable Instructions 2-31

2.11.1 BCF 2-31

2.11.2 BSF 2-32

2.11.3 BTFSC 2-32

2.11.4 BTFSS 2-32

2.11.5 BTG 2-33

2.12 Assembly Language Programs 2-33

2.13 Development Tools for PIC Microcontrollers 2-34

2.14 MPLAB Integrated Development Environment Software 2-34

2.14.1 Assembler (MPASM) 2-34

2.14.2 Software Simulator (MPLAB-SIM) 2-35

2.14.3 C Compiler (MPLAB-C) 2-35

2.15 Introduction to Assembly Language Programming and its Structure 2-35

2.15.1 Assembly Language Program Structure 2-35

2.16 Assembler Directives 2-36

2.17 Writing Simple Programs 2-38

2.18 Writing Programs to Perform Arithmetic Computations 2-40

2.18.1 Perform Addition Operations 2-41

2.18.2 Perform Subtraction Operations 2-43

2.18.3 Binary Coded Decimal (BCD) Addition 2-45
2.18.4 Multiplication 2-46
2.19 Program Loops 2-49
2.19.1 Changing the Program Counter 2-49
2.20 Reading and Writing Data in Program Memory 2-51
2.21 Using Program Loop to Create Time Delays 2-53
2.22 Rotate Instructions based Programs 2-55

Module V

Chapter 3 : PIC Programming in C 3-1 to 3-18

3.1 Embedded C Concepts 3-1
3.1.1 Comparison between Object Oriented and Procedural Language 3-1
3.1.2 Advantages of High Level based Embedded Software Development 3-2
3.2 Programming in Embedded C (From Embedded System and Real-time Perspective) 3-2
3.2.1 Use of Modifiers 3-2
3.2.2 Interrupt Service Routines (ISR) 3-3
3.2.3 Macros 3-4
3.2.4(A) Character Set of C 3-4
3.2.4(B) Keywords 3-4
3.2.4(C) Identifiers 3-5
3.2.4(D) Scalar Data Types in C 3-5
3.2.4(E) Constants and Variables 3-6
3.3 Operators 3-6
3.3.1 Unary Operators 3-7
3.3.2 Binary Operators 3-8
3.3.3 Ternary Operators 3-10
3.3.4 Assignment Operators and Statements 3-10
3.3.5 Selection Operators 3-11
3.3.6 Decision Making and Branching Statement 3-11
3.3.6(A) if-else Selective Statement 3-11
3.3.6(B) Switch-case Statement 3-12
3.3.7 Looping Statements 3-12
3.4 C- Control Structures for Iteration 3-13
3.4.1 for Loop 3-13
3.4.1(A) while and do-while loops 3-13
3.4.2 Arrays and Pointers 3-15
3.4.3 Function in C 3-16

Module IV and V

Chapter 4 : Parallel Ports Programming 4-1 to 4-7

4.1 I/O Port Programming 4-1
4.1.1 I/O Addressing 4-1
4.2 Port A 4-1
4.3 Port B 4-2
4.4 Port C 4-3
4.5 Port D 4-4
4.6 Port E 4-5
4.7 Simple Programs for I/O Ports 4-5

Module III and V

Chapter 5 : Timers and Counter Programming 5-1 to 5-33

5.1 Timers / Counters 5-1
5.2 Prescaling of PIC Timers 5-1
5.3 Timer 0 5-1
5.3.1 Timer 0 Block Diagram 5-1
5.3.2 Timer 0 Registers 5-3
5.4 Timer 1 5-4

5.4.1 Timer 1 Block Diagram 5-4
5.4.2 Timer 1 Registers 5-6
5.4.3 Timer 1 Control Register (T1CON)....5-6
5.5 Timer 2 5-7
5.5.1 Timer 2 Block Diagram 5-7
5.5.2 Timer2 Registers and TMR2IF Flag....5-8
5.5.3 Timer 2 Control Register (T2CON)....5-8
5.6 Timer 3 5-9
5.6.1 Timer 3 Block Diagram 5-9
5.6.2 Timer 3 Control Register (T3CON)....5-10
5.7 Programming the PIC18 Timers....5-11

Module III and VI

Chapter 6 : CCP Programming 6-1 to 6-15

6.1 CCP Module in PIC18 Microcontroller....6-1
6.2 Timers Required for CCP Applications....6-1
6.3 CCP Registers....6-1
6.3.1 CCP1CON Control Register....6-1
6.4 Generating of Waveform using Compare Mode of CCP Module....6-2
6.4.1 Programming the CCP Module in Compare Mode 6-3
6.5 Capture Mode....6-4
6.6 PWM Mode....6-7
6.6.1 Period of PWM 6-8
6.6.2 Duty Cycle of PWM....6-8
6.6.3 Steps for Programming the CCP Module for PWM Generation....6-9
6.7 Speed Control of DC Motor using PWM Mode of CCP Module....6-12
6.7.1 Interfacing DC Motor using L293 H-Bridge and Opto-isolator....6-12

Module III and V

Chapter 7 : Interrupt Programming 7-1 to 7-14

7.1 Interrupts Vs Polling....7-1
7.2 Interrupt Service Routine (ISR) 7-1
7.3 Steps in Executing an Interrupt....7-2
7.4 PIC18 Interrupt Structure....7-3
7.4.1 Timer Flag Interrupts 7-3
7.4.1(A) PIR Registers 7-3
7.4.1(B) Interrupt Control Register....7-3
7.5 PIC18 Interrupt Programming in C Using C18 Compiler....7-5
7.5.1 Difference between the RETURN and RETFIE 7-6
7.6 Hardware Interrupts 7-12
7.7 Serial Port Interrupts....7-13
7.8 Setting the Interrupt Priority 7-13
7.9 Interrupt inside an Interrupt / Nested Interrupt....7-14

Module IV and V

Chapter 8 : Serial Port Programming 8-1 to 8-22

8.1 Introduction to Serial Communication 8-1
8.1.1 Parallel vs Serial Interface 8-1
8.1.2 Types of Communication Systems....8-1
8.1.3 Baud Rate....8-2
8.2 RS 232 Standard Signals used in RS 232....8-2
8.3 PIC18 Connection to RS232....8-3
8.4 Interfacing Serial Port and USART....8-3
8.4.1 SPBRG Register....8-3
8.4.2 Sampling....8-3
8.4.3 RCSTA (Receive Status and Control Register) 8-5

8.5 USART Asynchronous Mode 8-6

8.6 USART Asynchronous Transmitter 8-7

8.6.1 Setting up Asynchronous Transmission 8-8

8.7 USART Asynchronous Receiver 8-9

8.7.1 Setting up Asynchronous Reception without Address Detect Mode 8-9

8.7.2 Setting up Asynchronous Reception with Address Detect 8-10

8.8 Programming the PIC18 to Transfer Data Serially ..8-10

8.9 Programming the PIC18 to Receive Data Serially...8-11

8.10 SPI (Serial Peripheral Interface)....8-11

8.10.1 PIC18F SPI Bus....8-12

8.10.2 Registers 8-13

8.11 I^2C Bus 8-15

8.12 I^2C Mode 8-15

8.12.1 Registers 8-16

8.12.2 Operation....8-18

8.12.3 Slave Mode....8-18

8.12.3(A) Addressing....8-19

8.12.3(B) Reception 8-19

8.12.3(C) Transmission 8-20

8.12.4 Master Mode....8-20

8.12.5 Baud Rate Generator....8-21

8.13 Comparison of SPI and I^2C 8-22

Module III and VI

Chapter 9 : Microcontroller Applications and ADC Module 9-1 to 9-61

9.1 Keyboard 9-1

9.1.1 Key Switch Mechanism....9-1

9.1.2 Hardware Key Debouncing 9-1

9.1.3 Software Key Debouncing....9-1

9.2 Keyboard Interface Circuit....9-2

9.2.1 Non-matrix Type Keyboard 9-2

9.2.2 Matrix Keyboard Interface 9-2

9.3 Interfacing of Switches....9-6

9.4 Display....9-7

9.4.1 LED Displays 9-7

9.4.2 Seven Segment Display (SSD) 9-14

9.5 Interfacing of PIC18F458 8 bit Model LCD (16×2)....9-17

9.5.1 Initialization of LCD....9-19

9.5.2 Interfacing LCD Module with PIC18F458 9-19

9.6 Interfacing Relays 9-34

9.7 Interfacing DAC 9-34

9.7.1 Features of DAC 0808 9-34

9.7.2 Pin Configuration and Functional Block Diagram 9-34

9.7.3 Interfacing DAC with PIC18F458 9-36

9.7.4 Programming PIC to Interface with DAC0808 9-37

9.8 PIC18F458 ADC 9-41

9.8.1 ADCON0 Register....9-41

9.8.2 ADCON1 Register....9-42

9.8.3 A/D Conversion Time....9-43

9.8.4 Steps for programming ADC....9-44

9.9 A/D Acquisition Requirements 9-45

9.10 Selecting the A/D Conversion Clock....9-46

9.11 Configuring Analog Port Pins 9-46

9.12 Use of the ECCP Trigger 9-47

9.12.1 A/D Result Registers 9-48

9.12.2 A/D Programming using interrupts 9-50

9.13 Temperature Sensor LM35 9-52

9.14 Stepper Motor....9-59

9.14.1 Step Angle....9-60

9.14.2 18F458 Interfacing to Stepper Motor....9-60

- **Appendix - A : Solved University Question Paper Dec. 2019**....A-1 to A-2
