*We dedicate this Publication soulfully and wholeheartedly,
in loving memory of our beloved founder director,
Late Shri. Pradeepji Lalchandji Lunawat,
who will always be an inspiration, a positive force and strong support
behind us.*

“My work is my prayer to God”

- Lt. Shri. Pradeepji L. Lunawat

*Soulful Tribute and Gratitude for all Your
Sacrifices, Hardwork and 40 years of Strong Vision...*

Syllabus...

Power Devices & Circuits : Sem. VI, E & TC Engineering (SPPU)

Teaching Scheme Theory : 03 Hrs/Week	Credits 03	Examination Scheme In-Sem (Theory) : 30 Marks End-Sem (Theory) : 70 Marks
--	----------------------	--

Prerequisite Courses, if any : --

1. Basic Electrical Engineering
2. Basic Electronics Engineering
3. Electronic Circuits
4. Electrical Circuits

Companion Course, if any : Power Devices & Circuits Lab

Course Objectives :

1. To introduce different power devices viz. SCR, GTO, MOSFET and IGBT with construction, characteristics, repetitive and non repetitive ratings and typical triggering / driver circuits.
2. To understand working, design and performance analysis and applications of various power converter circuits such as ac to dc converters, inverter and chopper.
3. To know various protection circuit requirements of power electronic devices.

Course Outcomes : On completion of the course, learner will be able

- CO1 :** To differentiate based on the characteristic parameters among SCR, GTO, MOSFET & IGBT and identify suitability of the power device for certain applications and understand the significance of device ratings.
- CO2 :** To design triggering / driver circuits for various power devices.
- CO3 :** To evaluate and analyze various performance parameters of the different converters and its topologies.
- CO4 :** To understand significance and design of various protections circuits for power devices.
- CO5 :** To evaluate the performance of uninterruptible power supplies, switch mode power supplies and battery.
- CO6 :** To understand case studies of power electronics in applications like electric vehicles, solar systems etc.

Course Contents

Unit I

Study of Power Devices :

Construction, VI characteristics (input, output and transfer if any), Switching characteristics of SCR, GTO, Power MOSFET and IGBT, Performance overview of Silicon, Silicon Carbide and GaN based MOSFET and IGBT, Various repetitive and Non-repetitive ratings of SCR, GTO, Power MOSFET and IGBT and their significance, Requirement of a typical triggering / driver (such as opto isolator) circuits for various power devices, Importance of series and Parallel operations of various power devices (No derivation and numerical). **(Refer Chapters 1 and 2)**

Mapping of Course Outcomes for Unit I :

- CO1 :** To differentiate based on the characteristic parameters among SCR, GTO, MOSFET & IGBT and identify suitability of the power device for certain applications and understand the significance of device ratings.
- CO2 :** To design triggering / driver circuits for various power devices.

Unit II

AC to DC Power Converters :

Concept of line and Forced commutation, Single phase Semi and Full converters using SCR for R and R-L loads and its performance analysis and Numerical, Effect of source inductance, Significance of power factor and Its improvement using PWM based techniques. Three phase full converters using SCR for R load and its performance analysis, Single phase PWM rectifier using IGBT, Three phase controlled rectifier using IGBT, Difference between SCR based conventional rectifiers and IGBT based rectifiers.

(Refer Chapters 3 and 4)

Mapping of Course Outcomes for Unit II :

- CO3 :** To evaluate and analyze various performance parameters of the different converters and its topologies.

Unit III

DC to AC Converters :

Single phase half and Full bridge square wave inverter for R and R-L load using MOSFET / IGBT and its performance analysis and numerical, Cross conduction in inverter, Need of voltage control and Strategies in inverters, Classifications of voltage control techniques, Control of voltage using various PWM techniques and their advantages, Concept and Need of harmonic elimination / reduction in inverters, Three phase voltage source inverter for balanced star R load with 120 and 180 degree mode of operation, Device utilization factor, Advanced converters like matrix inverter, Multi-level inverters and their topologies and its driver circuits (No derivation and numerical). **(Refer Chapters 5 and 6)**

Mapping of Course Outcomes for Unit III :

- CO3 :** To evaluate and analyze various performance parameters of the different converters and its topologies.

Unit IV

DC to DC Converters :

Classification of choppers, Step down chopper for R and RL load and its performance analysis, Step up chopper, Various control strategies for choppers, Types of choppers (isolated and non isolated) such as type A, B, C, D and E, switch mode power supply (SMPS) viz Buck, Boost and Buck-boost, Fly back, Half and Full bridge isolated and Non-isolated interleaved bidirectional topologies and Concept of integrated converter and Design of LM3524 based choppers, Concept of maximum power point tracking (MPPT).

(Refer Chapter 7)

Mapping of Course Outcomes for Unit IV :

CO3 : To evaluate and analyze various performance parameters of the different converters and its topologies.

Unit V

Power Devices Protection and Circuits :

Over voltage, Over current, di/dt and dv/dt protection circuits and Their design, Various cooling techniques and Heat sink design. Resonant converters such as Zero Current Switching (ZCS) and Zero Voltage Switching (ZVS). Electromagnetic interference such as radiated and Conducted EMI, Difference between EMI and EMC, EMI sources and Soft switching and Minimizing / Shielding techniques for EMI, Various EMI and EMC standards, Importance of isolation transformer.

(Refer Chapter 8 and 9)

Mapping of Course Outcomes for Unit V :

CO4 : To understand significance and design of various protections circuits for power devices.

Unit VI

Power Electronics Applications :

AC voltage controller using IGBT and SCR, FAN regulator, Electronic ballast, LED lamp driver, DC motor drive for single phase separately excited dc motor, BLDC motor drive, Variable voltage and variable frequency three phase induction motor drive, ON-line and OFF-line UPS. Study of various selection criteria and Performance parameters of batteries in battery operated power systems, Battery charging models and modes for EVs, Architecture of EVs battery charger, PFC stage circuit topologies with details of Full-bridge boost rectifier and Full-bridge interleaved for EV battery charger, Case study of power electronics in electric vehicle and Photovoltaic solar system.

(Refer Chapters 10 and 11)

Mapping of Course Outcomes for Unit VI :

CO5 : To evaluate the performance of uninterruptible power supplies, switch mode power supplies and battery.

CO6 : To understand case studies of power electronics in applications like electric vehicles, solar systems etc.

□□□

Unit I

Chapter 1 : Thyristors	1-1 to 1-46
-------------------------------	--------------------

Syllabus : Construction, VI characteristics (input, output and transfer if any), Switching characteristics of SCR, GTO, Various repetitive and non-repetitive ratings of rating of SCR, GTO and their significance, Requirement of typical triggering / driver (such as opto isolator) circuits for various power devices, Importance of series and parallel operation of various power devices.

1.15.1	Construction of GTO 1-35																																																																																																																																																																																																																																																																																																																																										
1.15.2	Operating Principle of GTO 1-35																																																																																																																																																																																																																																																																																																																																										
1.15.3	GTO Turn off Mechanism 1-35																																																																																																																																																																																																																																																																																																																																										
1.15.4	Magnitude of $I_G^{(-)}$ for Reliable Turn Off 1-36																																																																																																																																																																																																																																																																																																																																										
1.15.5	Static I-V Characteristics of GTO 1-36																																																																																																																																																																																																																																																																																																																																										
1.15.6	Switching Phases of GTO 1-37																																																																																																																																																																																																																																																																																																																																										
1.15.7	Important Characteristics of GTO 1-38																																																																																																																																																																																																																																																																																																																																										
1.15.8	Important Ratings of GTO 1-38																																																																																																																																																																																																																																																																																																																																										
1.15.9	Drive Circuit Requirements 1-38																																																																																																																																																																																																																																																																																																																																										
1.15.10	Drive Circuit for GTO 1-38																																																																																																																																																																																																																																																																																																																																										

1.15.11 Advantages of GTO over SCR1-39	2.3 Static Characteristic of Power BJT2-3
1.15.12 Advantages of GTO over BJT1-39	2.3.1 Operation of Power Transistor2-5
1.15.13 Difference between Gating Characteristics of GTO and SCR1-39	2.4 Power MOSFET2-5
1.15.14 Applications of GTO1-39	2.4.1 Structure of a Power MOSFET2-6
1.16 Comparison of GTO and SCR1-39	2.4.2 Simplified Structure of Power MOSFET2-6
1.17 Importance of Series and Parallel Operation of SCRs1-39	2.4.3 Principle of Operation2-7
1.17.1 Series Connection of SCRs1-40	2.4.4 I-V (Static) Characteristic of MOSFET2-8
1.17.2 Possible Operating Conditions of SCR1-40	2.4.5 Equivalent Circuit of Power MOSFET2-10
1.17.3 Unequal Voltage Sharing in the Blocking State1-40	2.4.6 Switching Characteristic of MOSFETs2-11
1.17.4 Unequal Voltage Sharing during the Transition State1-41	2.5 Gate Driving Requirements of a Power MOSFET2-12
1.17.5 Parallel Operation of Thyristors1-42	2.5.1 Gate Drive Circuit for MOSFETs2-12
1.17.6 Causes for the Unbalance in Current Sharing1-42	2.5.2 A Typical Gate Drive Circuit for Higher Switching Speeds2-13
1.17.7 Current Sharing in DC Circuits (Static Current Sharing)1-43	2.6 Ratings of Power MOSFET2-14
1.17.8 Current Sharing in AC Circuits (Dynamic Current Sharing).....1-44	2.6.1 Absolute Maximum Ratings2-14
1.17.9 String Efficiency and Derating1-44	2.6.2 Different Ratings of Power MOSFET2-15
1.18 Series and Parallel Connection of GTO.....1-44	2.6.3 Voltage Ratings2-15
1.18.1 Series Connection of GTOs.....1-45	2.6.4 Current Ratings2-16
1.18.2 Parallel Connection of GTOs1-45	2.6.5 Other Ratings2-16
• Review Questions..... 1-45	2.6.6 Safe-operating Area (SOA) of a Power MOSFET2-17
Unit I	
Chapter 2 : Transistor Based Devices 2-1 to 2-36	
Syllabus : Construction, VI characteristics (input, output and transfer if any), Switching characteristics of Power MOSFET and IGBT, Performance overview of Silicon, Silicon carbide and GaN based MOSFET and IGBT, Various repetitive and non-repetitive ratings of Power MOSFET and IGBT and their significance, Requirement of typical triggering / driver (such as opto isolator) circuits for various power devices, Importance of series and parallel operations of various power devices	
2.1 Power Transistors..... 2-2	2.7 Parallel Operation of MOSFETs2-17
2.1.1 Classification of Power Transistors 2-2	2.7.1 Merits of a Power MOSFET2-18
2.1.2 Power BJT 2-2	2.7.2 Demerits of a Power MOSFET2-19
2.2 Construction of Power BJT 2-2	2.7.3 Applications of Power MOSFETs2-19
	2.8 Insulated Gate Bipolar Transistor (IGBT).....2-19
	2.8.1 Features of IGBT2-19
	2.9 Construction of IGBT2-19
	2.9.1 Principle of Operation of IGBT2-20
	2.10 Static (I-V) Characteristic of IGBT2-21
	2.10.1 Transfer Characteristic of IGBT2-22
	2.11 Dynamic Characteristics of IGBT2-22
	2.11.1 Turn-on Characteristics2-22
	2.11.2 Turn-off Characteristics2-23
	2.12 IGBT Driving Circuits2-24
	2.12.1 IGBT Drive Circuit Requirements2-24
	2.12.2 IGBT Driver Circuit2-25

2.13	Ratings of IGBT	2-26
2.13.1	Maximum Ratings	2-26
2.13.2	Absolute Maximum Ratings	2-26
2.13.3	Voltage Ratings	2-27
2.13.4	Current Ratings	2-27
2.13.5	Other Ratings	2-27
2.13.6	Safe Operating Area (SOA) of IGBT	2-27
2.14	Parallel Operation of IGBTs	2-28
2.14.1	Merits of IGBT	2-29
2.14.2	Demerits of IGBT	2-29
2.14.3	Applications of IGBT	2-29
2.14.4	Advantages of IGBT over BJT	2-29
2.14.5	Advantages of IGBT over MOSFET	2-29
2.15	Comparison of Power Devices	2-29
2.16	Isolation of Gate and Base Drives	2-31
2.17	Silicon Carbide (SiC) Devices	2-31
2.17.1	Silicon Carbide (SiC)	2-31
2.17.2	Advantages of SiC Devices	2-31
2.17.3	Important Features	2-32
2.17.4	Applications	2-32
2.17.5	SiC in Power Electronics	2-32
2.17.6	SiC JFET	2-32
2.17.7	SiC MOSFET	2-33
2.18	GaN Power Devices	2-33
2.18.1	Advantages of GaN Devices	2-33
2.18.2	Applications of GaN Power Devices	2-33
2.18.3	Why GaN ?	2-34
2.18.4	Classification of GaN Devices	2-34
2.18.5	Advantages of GaN Over Silicon	2-34
2.18.6	GaN Devices Versus Silicon MOSFET	2-34
2.18.7	Driver is Critical for GaN Success	2-35
2.18.8	Performance Parameters of GaN Devices	2-35
2.18.9	Disadvantages of GaN Devices	2-35
2.18.10	Comparison of GaN Transistor and Si-MOSFET	2-35
	Review Questions.....	2-36

Unit II

Chapter 3 : Single Phase AC - DC Converter 3-1 to 3-56

Syllabus : Concept of line and forced commutation, Single phase Semi and Full converters using SCR for R and R-L loads and its performance analysis and numerical, Effect of source inductance, Significance of power factor and its improvement using PWM based techniques.

3.1	Commutation	3-2
3.1.1	Commutation Techniques	3-2
3.1.2	Natural Commutation	3-2
3.1.3	Line Commutation	3-2
3.1.4	Forced Commutation	3-3
3.2	Phase Controlled Rectifiers (AC to DC Converters)	3-3
3.2.1	Principle of AC-DC Converter	3-3
3.3	Classification of AC to DC Converters	3-4
3.3.1	Two Pulse Converters	3-5
3.4	Half Wave Controlled Rectifier	3-5
3.4.1	Operation of HWCR with (RL) Load	3-6
3.4.2	Effect of Freewheeling Diode in HWCR	3-8
3.4.3	Drawbacks of HWCR	3-9
3.5	Half Controlled Converter (Semiconverter)	3-9
3.5.1	Operation with Highly Inductive Load	3-10
3.5.2	Asymmetrical Configuration Operation with RL Load	3-12
3.5.3	Semiconverter with a Freewheeling Diode (RL Load)	3-13
3.5.4	Output Voltage Analysis of Semi converter	3-16
3.5.5	Analysis on the Input Side of Semiconverter	3-17
3.5.6	Performance Parameters for a Semiconverter	3-19
3.5.7	Operation with the Resistive Load (Symmetrical Configuration)	3-22
3.5.8	Analysis of Semiconverter with Resistive Load	3-24
3.5.9	Comparison of Semiconverter Configurations	3-26
3.5.10	Advantages of Semiconverters	3-26
3.5.11	Disadvantages of Semiconverters	3-27

3.5.12	Application	3-27	3.9	Need of Power Factor Improvement.....	3-51
3.6	Full Converters	3-27	3.9.1	P.F. Improvement Techniques	3-52
3.7	Full Converter (Bridge Configuration)	3-27	3.9.2	PWM Technique for PF Improvement.....	3-52
3.7.1	Operation of Full Converter with RL Load	3-28	•	Review Questions	3-54
3.7.2	Analysis of Full Converter with the RL Load (Output Side)	3-30	Unit II		
3.7.3	Two Quadrant Operation of Full Converters	3-31	<hr/>		
3.7.4	Conditions for Inversion Mode	3-33	Chapter 4 : Three Phase Converter 4-1 to 4-16		
3.7.5	Performance Parameters for Full Converter	3-33	Syllabus : Three phase full converters using SCR for R load and Its performance analysis, Single phase PWM rectifier using IGBT, Three phase controlled rectifier using IGBT, Difference between SCR based conventional rectifiers and IGBT based rectifiers.		
3.7.6	Fourier Analysis of Supply Current Waveform of Full Converter	3-33	4.1	Introduction	4-2
3.7.7	Performance Parameters	3-35	4.1.1	3-Phase Transformers	4-2
3.7.8	Operation of Full Converter with Resistive Load	3-39	4.2	Three Phase AC Supply	4-2
3.7.9	Analysis of Full Converter with Resistive Load	3-41	4.3	Drawing Phase and Line Voltages	4-2
3.7.10	Comparison of Semiconverter and Full Converter	3-43	4.3.1	How to Draw the Phase Voltages ?.....	4-2
3.7.11	Use of Freewheeling Diode in AC-DC Converter	3-44	4.3.2	How to Draw the Line Voltages ?.....	4-3
3.7.12	Effect of Freewheeling Diode on Full Converter	3-44	4.4	Classification of Three Phase Controlled Rectifiers	4-3
3.7.13	Difference between Regeneration and Freewheeling	3-46	4.5	Three Phase Full Converter	4-3
3.7.14	Advantages of Full Converter	3-46	4.5.1	Full Converter with R Load	4-4
3.7.15	Disadvantages of Full Converter	3-47	4.5.2	Continuous Conduction Mode ($\alpha \leq 60^\circ$)	4-5
3.7.16	Application	3-47	4.5.3	Discontinuous conduction mode ($\alpha \geq 60^\circ$)	4-8
3.7.17	Applications of Controlled Rectifiers	3-47	4.5.4	Comparison of Continuous and Discontinuous Modes	4-9
3.8	Effect of Source Impedance	3-47	4.5.5	Comparison of 1 ϕ and 3 ϕ Converters....	4-10
3.8.1	Effect of Resistive Source Impedance	3-47	4.5.6	Demerits of Conventional Rectifiers	4-10
3.8.2	Effect of Source Inductance	3-47	4.6	Single Phase PWM Rectifier using IGBT	4-10
3.8.3	Single Phase with Source Inductance	3-47	4.7	Three-Phase PWM Rectifier	4-12
3.8.4	Analysis of Effect of Source Inductance.....	3-49	4.7.1	Advantages of PWM Converters	4-14
3.8.5	P.F. Improvement Techniques	3-52	4.7.2	Application of PWM Converter	4-14
3.8.6	PWM Technique for PF Improvement.....	3-52	4.7.3	Difference between SCR Based and IGBT Based Rectifiers	4-15
			4.8	University Questions and Answers.....	4-16
			•	Review Questions	4-15

Unit III

Chapter 5 : Single Phase DC - AC Converter 5-1 to 5-34

Syllabus : Single phase half and full bridge square wave inverter for R and R-L load using MOSFET / IGBT and its performance analysis and numerical, Cross conduction in inverter, Need of voltage control and Strategies in inverters, Classifications of voltage control techniques, Control of voltage using various PWM techniques and their advantages.

5.1	Introduction	5-2
5.2	Classification of Inverters	5-2
5.2.1	VSI and CSI	5-2
5.2.2	Classification Based on the Configuration of the Inverter	5-2
5.2.3	Classification Based on Output Waveform	5-2
5.2.4	Classification Based on Type of Commutation Circuit	5-3
5.2.5	Classification Based on the Power Semiconductor Devices	5-3
5.3	Transistor based Inverters	5-3
5.3.1	Half Bridge Square Wave VSI	5-3
5.3.2	Fourier Analysis of the Load Voltage of a Half Bridge Inverter	5-5
5.3.3	Instantaneous Output Current	5-6
5.3.4	Fundamental Output Power	5-7
5.4	Performance Parameters of Inverters	5-7
5.4.1	Harmonic Factor of nth Harmonics HF _n	5-7
5.4.2	Total Harmonic Distortion (THD)	5-7
5.4.3	Distortion Factor DF	5-7
5.4.4	Lowest Order Harmonic (LOH)	5-7
5.4.5	Cross Conduction	5-8
5.5	Single Phase Full Bridge Inverter (Square Wave Output)	5-12
5.5.1	Operation with Resistive Load	5-13
5.5.2	Bridge Inverter with RL Load	5-14
5.5.3	Analysis of Bridge Inverter	5-16
5.5.4	Drawbacks of Square Wave Output Voltage	5-21
5.5.5	Comparison of Half Bridge and Full Bridge Inverters	5-21

5.6	Voltage Control Techniques	5-21
5.6.1	Need of Voltage Control	5-21
5.6.2	Need of Harmonic Control	5-21
5.6.3	Classification of Voltage Control Techniques	5-22
5.6.4	Control of DC Input Voltage	5-22
5.6.5	Control of Voltage Delivered by Inverter	5-23
5.7	Control of Voltage within Inverter using PWM Technique	5-23
5.7.1	Various PWM Techniques	5-23
5.7.2	Single Pulse Width Modulation (SM)	5-24
5.7.3	Symmetrical Multiple Pulse Width Modulation	5-25
5.7.4	Comparison of SM and SMM	5-27
5.7.5	Multiple Pulse Modulation with Selective Elimination of Harmonics (MMSR)	5-28
5.7.6	Sinusoidal Pulse Width Modulation (SPWM)	5-29
5.7.7	Comparison of Various Methods of Output Voltage Control	5-31
5.8	Current Source Inverters	5-31
5.9	Principle of Operation of CSI	5-32
5.9.1	Advantages of CSI	5-33
5.9.2	Drawbacks of CSI	5-33
5.9.3	Comparison of VSI and CSI	5-33
5.10	Applications of Inverter	5-33
5.11	University Questions and Answers	5-34
	• Review Questions	5-34

Unit III

Chapter 6 : Three Phase DC-AC Converter 6-1 to 6-32

Syllabus : Three phase voltage source inverter for balanced star R load with 120 and 180 degree mode of operation, device utilization factor, Advanced converters like matrix inverter, Multi-level inverters and Their topologies and Its driver circuits (no derivation and numerical).

6.1	Introduction	6-2
6.1.1	Three Phase Bridge Inverter	6-2
6.1.2	Modes of Operation	6-2
6.2	180° Mode of Conduction	6-2

6.2.1	Operation in 180° Mode with a Star Connected Resistive Load 6-3	6.9	Diode Clamped Multilevel Inverter 6-25
6.2.2	Cross Conduction or Shoot Through Fault in 180° Mode 6-7	6.9.1	Features of Diode-Clamped Inverter 6-26
6.2.3	120° Mode of Conduction with Star Connected Resistive Load 6-8	6.9.2	Advantages of Diode-Clamped Inverter 6-26
6.2.4	Device Utilization Factor (DUF) 6-11	6.9.3	Disadvantages of Diode-Clamped Inverter 6-27
6.2.5	Comparison of 120° and 180° Modes 6-11	6.10	Flying Capacitors Multi-level Inverter (FCMLI) 6-27
6.3	PWM Based VSI 6-11	6.10.1	Features of Flying Capacitors Multi-level Inverter 6-28
6.3.1	1-Phase PWM Half Bridge Inverter 6-11	6.10.2	Advantages of FCMLI 6-28
6.3.2	Analysis of PWM Half Bridge Inverter 6-12	6.10.3	Disadvantages of FCMLI 6-28
6.3.3	1-Phase Bipolar PWM Bridge Inverter 6-14	6.11	Cascaded Multi-level Inverter 6-29
6.3.4	1-Phase Unipolar PWM Bridge Inverter 6-15	6.11.1	Generation of Quasi-square Waveform 6-30
6.3.5	Three Phase PWM Inverter 6-15	6.11.2	Features of Cascaded Inverter 6-30
6.3.6	Advantages of SPWM 6-17	6.11.3	Advantages of Cascaded Inverter 6-30
6.3.7	Disadvantages of SPWM 6-17	6.11.4	Disadvantages of Cascaded Inverter 6-30
6.4	Three Phase Current Source Inverter 6-17	6.11.5	Comparison of Multi-level Converters 6-31
6.5	Harmonic Elimination Techniques 6-18	6.11.6	Comparison of Multi-pulse and Multi-level Inverters 6-31
6.5.1	Harmonic Reduction using Single Pulse Width Modulation 6-18	6.12	Applications of Multilevel Inverter 6-31
6.5.2	Harmonic Reduction using Transformer Connections 6-18		• Review Questions 6-32
6.5.3	Harmonic Reduction using the PWM Techniques 6-19		
6.5.4	Harmonic Elimination Technique 6-19		
6.5.5	Harmonic Injected Modulation 6-19		
6.5.6	Third Harmonic PWM 6-20		
6.5.7	Space Vector Modulation (SVM) 6-20		
6.5.8	Comparison of PWM Techniques 6-21		
6.6	Matrix Converter 6-21		
6.7	Multilevel Inverters 6-22		
6.7.1	Need of Multilevel Inverters 6-22		
6.7.2	Multilevel Concept 6-23		
6.7.3	Output Phase Voltage 6-24		
6.7.4	Realization of multilevel Inverters 6-24		
6.7.5	Features / Advantages of MLI 6-24		
6.7.6	Limitations of MLI 6-24		
6.8	Types of Multilevel Inverter 6-25		

UNIT IV

Chapter 7 : DC - DC Converters

7-1 to 7-56

Syllabus : Classification of choppers, Step down chopper for R and RL load and its performance analysis, Step up chopper, Various control strategies for choppers, Types of choppers (isolated and non isolated) such as type A, B, C, D and E, switch mode power supply (SMPS) viz Buck, Boost and Buck-boost, Fly back, Half and Full bridge isolated and Non-isolated interleaved bidirectional topologies and Concept of integrated converter and design of LM3524 based choppers, Concept of maximum power point tracking (MPPT).

7.1	A DC-DC Chopper 7-2
7.2	Classification of Choppers Based on Quadrant of Operation 7-2
7.2.1	Class A Chopper 7-3

7.2.2	Class B Chopper	7-3	7.11.1	Advantages of SMPS	7-33
7.2.3	Class C Chopper	7-3	7.11.2	Disadvantages of SMPS	7-33
7.2.4	Class D Chopper	7-3	7.11.3	Classification of SMPS	7-33
7.2.5	Class E Chopper	7-4	7.11.4	Types of Non-isolated SMPS	7-34
7.3	Control Strategies	7-4	7.12	Buck Switching Regulator	7-34
7.3.1	Time Ratio Control (TRC) or PWM	7-4	7.12.1	Advantages of Buck Regulator	7-35
7.3.2	Frequency Modulation	7-5	7.12.2	Disadvantages	7-35
7.3.3	Current Limit Control (CLC)	7-5	7.13	Switching Boost Chopper	7-35
7.3.4	Variable Pulse Width and Frequency	7-6	7.13.1	Discontinuous Conduction Mode	7-36
7.4	Comparison between Different Control Strategies of a Chopper	7-6	7.13.2	Continuous Conduction Mode	7-36
7.5	Class A Chopper with R load	7-6	7.13.3	Advantages of Boost Regulator	7-37
7.5.1	Analysis of Step Down Chopper (Output Side)	7-7	7.13.4	Disadvantages	7-37
7.6	Class A Chopper with RLE Load	7-11	7.14	Switching Buck-Boost Chopper	7-37
7.6.1	Modes of Operation	7-12	7.14.1	Operation in CCM	7-38
7.6.2	Class A Chopper with RLE Load and Continuous Load Current	7-12	7.14.2	Features of Buck-Boost Regulator	7-39
7.6.3	Class A Chopper with RLE Load and Discontinuous Load Current	7-13	7.14.3	Comparison of Switching Regulators.....	7-39
7.6.4	Step Down Chopper with RL Load and Discontinuous Load Current	7-13	7.15	SMPS with Electrical Isolation	7-39
7.7	Chopper Classification on the Basis of Operating Quadrants	7-19	7.16	Fly back (FB) Converters	7-40
7.7.1	Quadrant of Operation of Class A Chopper	7-19	7.16.1	Discontinuous Conduction Mode	7-40
7.7.2	Class B Chopper (Regenerative Chopper)	7-20	7.16.2	FB Regulator in Continuous Mode	7-42
7.7.3	Type C Chopper	7-21	7.16.3	Continuous versus Discontinuous Mode	7-43
7.7.4	Type D Chopper	7-23	7.16.4	Why is Discontinuous Mode Preferred?	7-44
7.8	Class E Chopper	7-24	7.16.5	Design Criterion for F.B. Converter	7-44
7.8.1	Applications of Type E Chopper	7-27	7.17	Half Bridge Converter	7-44
7.8.2	Merits of a four Quadrant Chopper	7-27	7.17.1	Advantages of H.B. Converter	7-46
7.8.3	Demerits of a Four Quadrant Chopper	7-27	7.17.2	Disadvantages of H.B. Converter	7-46
7.9	Step Up Chopper	7-27	7.18	Full Bridge Converter	7-46
7.9.1	Expression for the Output Voltage (RL Load)	7-28	7.18.1	Advantages of F.B. Converter	7-48
7.9.2	Step up Chopper with RLE Load	7-30	7.18.2	Disadvantages	7-48
7.10	Applications of a Chopper	7-31	7.18.3	Applications	7-48
7.11	Switch Mode Power Supply (SMPS)	7-32	7.18.4	H. B. Versus F. B. Converter	7-48
			7.19	Concept of Integrated Converter	7-49
			7.19.1	Benefits of Integrated Switching Regulators	7-49
			7.20	Design of LM 3524 Based Choppers	7-50
			7.21	Buck Regulator using IC LM 3524	7-52
			7.21.1	Design Calculations	7-53

7.21.2	Application	7-54
7.22	Boost Converter using IC LM3524	7-54
7.22.1	Design Calculations	7-54
7.23	Concept of MPPT.....	7-55
7.23.1	General Applications of SMPS.....	7-56
•	Review Questions.....	7-56

Unit V

Chapter 8 : Power Devices Protection & Circuits

8-1 to 8-26

Syllabus : Over voltage, Over current, di/dt and dv/dt protection circuits and their design, Various cooling techniques and Heat sink design. Electromagnetic interference such as radiated and Conducted EMI, Difference between EMI and EMC, EMI sources and Soft switching and Minimizing / Shielding techniques for EMI, Various EMI and EMC standards, Importance of isolation transformer.

8.1	Introduction	8-2	8.6	Over Current Fault Conditions	8-12
8.2	Cooling and Heat Sinks	8-2	8.6.1	Output Short Circuit	8-12
8.2.1	Heat Transfer Considerations	8-2	8.6.2	Internal Faults	8-12
8.2.2	Thermal Resistance of a Power Device	8-2	8.6.3	Inversion Failure in Naturally Commutated Circuit	8-13
8.2.3	Thermal Model of a Power Device	8-3	8.6.4	Commutation Failure in Forced Commutation Circuit	8-13
8.2.4	Factors Affecting the Value of θ_{CS}	8-4	8.7	Over Current Protection	8-13
8.2.5	Thermal Resistance of the Heat Sink θ_{SA}	8-4	8.7.1	Requirements of a Fuse	8-13
8.2.6	Heat Sink	8-4	8.7.2	Over current Protection using Fuses	8-13
8.2.7	Derating of Power Transistors	8-5	8.7.3	Semiconductor Fuses	8-14
8.2.8	Heat Sink Design	8-5	8.7.4	Fuse SCR Co-ordination in AC Circuits	8-15
8.3	Different Cooling Methods for Power Devices	8-8	8.7.5	Fuse and Circuit Breaker Co-ordination	8-16
8.4	Supply and Load Side Transients	8-9	8.7.6	Fuses in DC Circuits	8-16
8.4.1	Supply Side Transients	8-9	8.7.7	Complete Protection of Converter	8-16
8.4.2	Load Transients	8-9	8.7.8	Auto Current Limiting	8-16
8.5	Over voltage Protection Circuits	8-10	8.8	dv/dt and di/dt Protection	8-17
8.5.1	Snubber Circuits (dv/dt Suppression).....	8-10	8.8.1	di/dt Protection (Turn on Snubber)	8-17
8.5.2	Selenium Diodes (Protection Against Transient Overvoltage)	8-10	8.8.2	dv/dt Protection (Turn off Snubber)	8-17
8.5.3	Metal Oxide Varistors (MOVs)	8-11	8.8.3	Design of a Snubber Circuit	8-19
8.5.4	Crowbar Circuit (Over current / Over voltageProtection)	8-11	8.8.4	Snubber Circuit for GTO	8-20
			8.8.5	Over current Protection for GTO	8-21
			8.9	Electromagnetic Interference (EMI)	8-21
			8.10	Electromagnetic compatibility (EMC)	8-22
			8.10.1	Issues Pursued by EMC	8-22
			8.10.2	Difference Between EMI and EMC	8-22

Unit V

Chapter 9 : Resonant Converters 9-1 to 9-18

Syllabus : Resonant converters such as Zero Current Switching (ZCS) and Zero Voltage Switching (ZVS).

9.1	Need for Resonant Converters.....	9-2
9.1.1	Advantages of Resonant Converters	9-2
9.1.2	Disadvantages of Resonant Converters ...	9-2
9.2	Classification of Resonant Converters	9-3
9.2.1	Applications of Resonant Converters	9-3
9.3	Resonant Switch Converters	9-4
9.3.1	Types of Resonant Switch Converter	9-4
9.4	ZCS Resonant Switch Converter	9-4
9.4.1	L and M Types of ZCS Switch	9-4
9.4.2	Half-wave Types of ZCS Resonant Switches	9-4
9.4.3	Full-wave Types of ZCS Resonant Switch	9-5
9.4.4	M-Type ZCS DC-DC Converter	9-5
9.4.5	L-Type ZCS DC-DC Converter	9-7
9.4.6	L-Type ZCS Converter with Energy Feedback 9-9	
9.4.7	Advantages of ZCS Converter	9-9
9.4.8	Disadvantages of ZCS Converter	9-9
9.5	Zero Voltage Switching Resonant (ZVS) Converters	9-9
9.5.1	Features of ZVS Converter	9-12
9.5.2	Advantages of ZVS Converter	9-12
9.5.3	Disadvantages of ZVS Converter	9-12
9.6	Comparison between ZVS and ZCS Topologies	9-13
9.6.1	ZVS is Better Than ZCS	9-13
9.7	ZVS Clamped-Voltage Topologies	9-13
9.7.1	ZVS-CV DC-to-DC (Two Quadrant) Resonant Converter	9-13
9.7.2	ZVS-CV DC-to-AC Inverters	9-16
9.7.3	Switch-Mode Converter With Voltage Cancellation	9-17
9.8	Comparison of Linear, Switched Mode and Resonant Converters.....	9-18
	Review Questions.....	9-18

Unit VI

Chapter 10 : Power Electronics Applications 10-1 to 10-48

Syllabus : AC voltage controller using IGBT and SCR, FAN regulator, Electronic ballast, LED lamp driver, DC motor drive for single phase separately excited dc motor, BLDC motor drive, Variable voltage and variable frequency three phase induction motor drive, ON-line and OFF-line UPS.

10.1	Introduction.....	10-2
10.2	AC Voltage Regulator	10-2
10.2.1	Types of AC Voltage Regulators	10-2
10.3	Classification of AC Regulators	10-2
10.4	F.W. AC Regulator using SCRs	10-2
10.4.1	Operation With Resistive Load	10-2
10.4.2	Analysis of F. W. AC Regulator	10-4
10.4.3	FW AC Voltage Regulator with RL Load	10-5
10.4.4	Analysis of FW Controller with RL Load	10-7
10.5	AC FW Regulator using IGBT	10-11
10.5.1	Advantages of FW AC Regulator	10-12
10.5.2	Disadvantages of FW AC Regulator.....	10-12
10.5.3	Applications	10-12
10.6	Electronic Ballast	10-13
10.7	LED Driver Circuit	10-13
10.7.1	Advantages	10-14
10.7.2	Limitations	10-14
10.7.3	Applications	10-14
10.8	Fan Regulator using Triac	10-14
10.9	A Separately Excited DC Motor	10-16
10.9.1	Characteristics of DC Motor	10-17
10.9.2	Speed Control Methods	10-17
10.9.3	Torque-Speed Characteristic of DC Drive	10-18
10.9.4	Open Loop or Closed Loop Control	10-18
10.9.5	Basic Open Loop Speed Control	10-19
10.10	Single Phase Semiconverter DC Drive	10-19
10.10.1	Semiconverter Drive in the Continuous Conduction Mode	10-19
10.10.2	Quadrant of Operation	10-21
10.10.3	Features of Semiconverter Drive	10-21

10.10.4 Advantages of Semiconverter Drive 10-21	10.22 Off Line UPS10-43
10.10.5 Drawbacks of Semiconverter Drive 10-21	10.22.1 Specifications of off line UPS10-44
10.11 Single Phase Full Converter DC Drive 10-24	10.22.2 Merits of off-line UPS10-44
10.11.1 Full Converter Drive in the Continuous Conduction Mode 10-25	10.22.3 Demerits of off-line UPS10-44
10.11.2 Features of Full Converter Drive 10-27	10.22.4 Applications of off-line UPS10-45
10.11.3 Advantages of Full Converter Drive 10-27	10.23 Important Terms Related to UPS10-45
10.11.4 Drawbacks of Full Converter Drive 10-27	10.23.1 Comparison of UPS Systems10-45
10.11.5 Comparison between the Semi and Full Converter DC Drives 10-27	10.24 Batteries used for UPS10-45
10.12 Closed Loop DC Drive 10-30	10.25 Applications of UPS10-46
10.13 Stepper Motor Drives 10-31	10.26 Solved Examples10-46
10.13.1 Electrical Circuit Diagram of PM Stepper Motor 10-31	10.27 University Questions and Answers.....10-48
10.13.2 Drive Requirements for a Step Motor .. 10-31	• Review Questions10-48
10.13.3 Open Loop Control of Stepper Motor 10-32	Unit VI
10.13.4 Closed Loop Control of Stepper Motors 10-32	Chapter 11 : Electric Vehicle Batteries 11-1 to 11-12
10.14 A Bipolar (Full Wave) BLDC Drive 10-33	Syllabus : Study of various selection criteria and Performance parameters of batteries in battery operated power systems, Battery charging models and Modes for EVs, Architecture of EVs battery charger, PFC stage circuit topologies with details of Full-bridge boost rectifier and Full-bridge interleaved for EV battery charger, Case study of power electronics in electric vehicle and Photovoltaic solar system.
10.15 Introduction to AC Motor Control 10-34	11.1 Introduction to EV..... 11-2
10.15.1 Operating Modes of the Induction Motor 10-34	11.2 Components of EV 11-2
10.16 Speed Control of Induction Motors 10-35	11.3 Requirements of EV Batteries 11-4
10.17 Stator Voltage Control 10-35	11.3.1 Types of EV Batteries 11-4
10.18 Stator Voltage and Frequency Control (Constant V/f Control) 10-37	11.4 Selection Criteria for EV Batteries 11-4
10.18.1 Implementation of Constant (V/f) Control 10-37	11.5 Performance Parameters of EV Batteries 11-5
10.18.2 Square Wave Inverter Based Drive 10-38	11.6 Battery Charging Modes for EVs 11-7
10.18.3 Constant V/f Control using PWM Inverter 10-39	11.6.1 Charging Time for an EV 11-8
10.19 Closed Loop Control using PWM Inverter 10-40	11.7 Architecture of EV Battery Charger 11-9
10.20 UPS 10-41	11.7.1 Classification of Conductive Chargers 11-9
10.20.1 Need of UPS 10-41	11.7.2 EV Battery Charger Architecture 11-9
10.20.2 Types of UPS 10-41	11.8 PFC Stage Topologies 11-11
10.21 On Line UPS 10-41	11.8.1 Full Bridge Boost Rectifier 11-11
10.21.1 Specifications of on line UPS 10-42	11.8.2 Full Bridge Interleaved Rectifier.....11-12
10.21.2 Features of on line UPS system 10-43	• Review Questions11-12
10.21.3 Merits of on-line UPS 10-43	□□□
10.21.4 Demerits of on-line UPS 10-43	
10.21.5 Applications of online UPS 10-43
