

**Module 1****Chapter 1 : Introduction to the Compensator****1-1 to 1-21**

✓	Syllabus Topic : Basic Concept of Compensator Design	1-1
1.1	Basic Concept of Compensator Design (Dec. 17).....	1-1
✓	Syllabus Topic : Position of Compensator in a Control System	1-2
1.1.1	Position of Compensator in a Control System.....	1-2
1.1.2	Selection of a Compensator	1-3
✓	Syllabus Topic : Requirement of Compensator.....	1-3
1.2	Requirement of Compensator	1-3
✓	Syllabus Topic : Cascade Compensator	1-4
1.3	Cascade compensator	1-4
1.3.1	Cascade Compensation in Time Domain.....	1-5
1.3.2	Cascade Compensation in Frequency Domain.....	1-5
✓	Syllabus Topic : Feedback Compensator	1-6
1.4	Feedback Compensator	1-6
1.4.1	Selection of Cascade or Feedback Compensator.....	1-7
✓	Syllabus Topic : Gain Compensation	1-7
1.5	Gain Compensation.....	1-7
1.5.1	Effect of Gain Compensation	1-7
✓	Syllabus Topic : Lag, lead and Lag-lead Compensator	1-8
1.6	Lag, Lead and Lag-lead Compensator.....	1-8
1.6.1	Lead compensator (Dec. 15, May 17, Dec. 17, May 18).....	1-8
1.6.1.1	Advantages of Lead Compensator.....	1-9
1.6.1.2	Disadvantages of Lead Compensation	1-9
1.6.1.3	Effect of the Phase Lead Compensation.....	1-9
1.6.1.4	Limitations of the Phase Lead Compensation.....	1-9
1.6.2	Lag Compensators (Dec. 15, May 16, Dec. 17)	1-9
1.6.2.1	Advantages of Lag Compensator.....	1-10
1.6.2.2	Disadvantages of Lag Compensator	1-10
1.6.2.3	Limitations of Lag Compensator (Dec. 15).....	1-11
1.6.3	Lag - lead Compensator.....	1-12
1.7	Switching Controllers.....	1-12
1.8	Continuous Controllers.....	1-12
✓	Syllabus Topic : Proportional Compensation	1-13
1.8.1	Proportional Controller/Compensator.....	1-13
✓	Syllabus Topic : Integral Compensation.....	1-13
1.8.2	Role of an Integral Controller/ Compensator (IC).....	1-13

✓	Syllabus Topic : Derivative Compensation.....	1-13
1.8.3	Role of a Derivative Controller/ Compensator (DC)	1-13
✓	Syllabus Topic : Three Term PID	1-15
1.9	Three Term PID	1-15
1.9.1	Different Form of PID Control (Dec. 15)	1-15
✓	Syllabus Topic : Physical Realization of Compensator with Passive and Active Components.....	1-16
1.10	Physical Realization of Compensator with Passive and Active Components	1-16
1.10.1	Active-Circuit Realization	1-16
1.10.2	Passive-Circuit Realization	1-17
✓	Syllabus Topic : Basic Block Diagrams of a Compensated Closed Loop Control System.....	1-18
1.11	Basic Block Diagrams of a Compensated Closed Loop Control System	1-18
1.11.1	Actuator.....	1-19
1.11.2	Plant or Process.....	1-19
1.11.3	Compensator	1-19
1.11.4	Controller	1-19
1.11.5	Sensor.....	1-19
1.11.6	Feedback	1-19
1.11.7	Working.....	1-20
1.12	Exam Pack (University and Review Questions)	1-20
•	Chapter Ends	1-21

Module 2**Chapter 2 : Design of Compensators using****Root Locus Technique****2-1 to 2-45**

✓	Syllabus Topic : Introduction	2-1
2.1	Introduction	2-1
2.1.1	Improving Transient Response.....	2-1
2.1.2	Improving Steady-State Error	2-2
2.2	Improving Steady-State Error via Cascade Compensation.....	2-3
2.3	Ideal Integral Compensation (PI)	2-4
2.4	Designing a Lag Compensator using Root Locus	2-5
2.4.1	Steps to Design lag compensator.....	2-5
✓	Syllabus Topic : Transient Response Improvement by Cascade Compensation.....	2-12
2.5	Improving Transient Response via Cascade Compensation.....	2-12
2.6	Ideal Derivative Compensation (PD)	2-12
2.7	Lead compensators	2-15

2.7.1	Lead Compensator Design using Root Locus.....	2-16
✓	Syllabus Topic : Improving Steady State and Transient Response	2-23
2.8	Improving Steady State and Transient Response	2-23
2.9	Lag-Lead Compensator Design	2-23
✓	Syllabus Topic : Design of Rate Feedback Compensator	2-31
2.10	Design of Rate Feedback Compensator	2-31
2.10.1	Feedback Compensator	2-32
2.10.2	Feedback Compensation : Design Procedures.....	2-33
2.10.3	Simplified Rate Feedback Compensation : A Design Approach.....	2-33
2.10.4	Design of Rate Feedback.....	2-35
2.10.5	Compensating Zero via Rate Feedback.....	2-36
2.10.6	Minor Loop Feedback Compensation	2-40
✓	Syllabus Topic : Notch Filter	2-41
2.11	Notch Filter	2-41
2.11.1	Physical Realization of a Notch Filter.....	2-43
2.12	Unsolved Problems	2-44
2.13	Exam Pack (Review Questions).....	2-45
•	Chapter Ends	2-45

Module 3

Chapter 3 : Design of Compensators using Frequency Response Technique (Bode Plot)		3-1 to 3-60
✓	Syllabus Topic : Introduction	3-1
3.1	Introduction.....	3-1
✓	Syllabus Topic : Transient Response Improvement by Gain Adjustment	3-2
3.2	Transient Response Improvement by Gain Adjustment.....	3-2
✓	Syllabus Topic : Lead Compensation.....	3-6
3.3	Lead Compensation	3-6
✓	Syllabus Topic : Lag Compensation.....	3-32
3.4	Lag Compensation	3-32
3.4.1	Steps to Design a Lag Compensator (May 18).....	3-37
✓	Syllabus Topic : Lag-Lead Compensation	3-49
3.5	Bode Plot of Lag-Lead Compensator	3-49
3.6	Exam Pack (University and Review Questions).....	3-60
•	Chapter Ends	3-60

Module 4

Chapter 4 : Design of Compensators using State Variable Approach (Bode Plot)		4-1 to 4-39
✓	Syllabus Topic : Introduction	4-1
4.1	Introduction	4-1
✓	Syllabus Topic : Pole Placement Topology	4-2
4.2	Pole Placement Topology.....	4-2
✓	Syllabus Topic : Controller Design by Pole Placement Topology in Phase Variable Form	4-3
4.2.1	Pole Placement for Plants in Phase-Variable form.....	4-3
✓	Syllabus Topic : Controllability, Controllability Matrix	4-7
4.3	Concept of Controllability (Dec. 16).....	4-7
4.3.1	Definition of Controllability	4-8
4.3.2	Kalman's Test for Controllability	4-8
4.3.2.1	Rank of Matrix.....	4-8
✓	Syllabus Topic : Controllability by Inspection	4-10
4.3.3	Controllability by Inspection	4-10
✓	Syllabus Topic : Complete Controllability	4-11
4.4	Complete Controllability.....	4-11
4.4.1	Controllability Tests.....	4-12
✓	Syllabus Topic : Alternative Approach to Controller Design	4-13
4.5	Alternative Approaches to Controller Design.....	4-13
4.5.1	Controller Design by Matching Coefficients.....	4-14
✓	Syllabus Topic : Controller Design by Transformation.....	4-14
4.5.2	Controller Design by Transformation Method.....	4-14
4.5.3	Controller Design by Transformation	4-15
✓	Syllabus Topic : Introduction to Observer/Estimator	4-19
4.6	Introduction to Observer / Estimator (Dec. 17, May 18).....	4-19
4.6.1	Concept of Observability (May 17)	4-20
✓	Syllabus Topic : Observability by Inspection, Observability Matrix	4-20
4.6.2	Observability by Inspection	4-20
4.6.3	Kalman's Test for Observability	4-20
✓	Syllabus Topic : Observer Design by Pole Placement.....	4-22
4.6.4	Pole Placement Method for Observers.....	4-22
✓	Syllabus Topic : Alternative Approach to Observer Design.....	4-23
4.7	Alternative Approaches to Observer Design (May 16)	4-23

4.7.1	Types of Observer.....	4-26
4.7.2	Necessity of an Observer.....	4-26
✓	Syllabus Topic : Reduced Order Observer/Estimator.....	4-26
4.8	Reduced Order State Observer.....	4-26
✓	Syllabus Topic : Full Order Observer/Estimator.....	4-28
4.8.1	Design of Full Order Observer.....	4-28
4.8.1.1	Full-Order State Observer.....	4-28
✓	Syllabus Topic : Observer Design by Transformation.....	4-29
4.8.2	Observer Design by Transformation.....	4-29
✓	Syllabus Topic : Steady State Error Design using Integral Control.....	4-30
4.9	Steady-State Error Design via Integral Control (May 18).....	4-30
4.9.1	Design of Integral Control.....	4-31
4.10	Exam Pack (University and Review Questions).....	4-36
•	Chapter Ends	4-39

Module 5

Chapter 5 : Digital Control Systems 5-1 to 5-26

✓	Syllabus Topic : Introduction.....	5-1
5.1	Introduction.....	5-1
✓	Syllabus Topic : Components of Digital Control System.....	5-2
5.2	Configuration and Components of the Basic Digital Control System.....	5-2
5.2.1	Comparison of Analog and Digital Control Systems.....	5-3
✓	Syllabus Topic : Advantage of Digital Control.....	5-4
5.2.2	The Advantages of Digital Control.....	5-4
5.2.3	Disadvantages of Digital Control Systems.....	5-4
5.2.4	Applications of Digital Control Systems.....	5-4
5.3	Sampling Process (Dec. 15).....	5-5
5.3.1	Sampler (Dec. 15).....	5-5
5.3.2	Shannon's Sampling Theorem.....	5-6
5.4	Overview of Z-Transform.....	5-6
5.4.1	Defination of Z-Transform.....	5-6
✓	Syllabus Topic : Derivation of Digital/ Pulse Transfer Function.....	5-7
5.4.2	The Z-transfer Function (Pulse Transfer Function) (Dec. 16).....	5-7
✓	Syllabus Topic : Block Diagram Reduction.....	5-7
5.5	Block Diagram Reduction (May 17).....	5-7

5.6	Stability (Dec. 15).....	5-12
✓	Syllabus Topic : Stability of Digital System on z-Plane.....	5-12
5.6.1	Digital System Stability via the z-Plane (Dec. 15).....	5-12
5.6.2	Mapping between the s Plane and the z Plane.....	5-12
5.6.3	Sums on Stability.....	5-13
✓	Syllabus Topic : Bilinear Transformation.....	5-16
5.7	Stability Analysis of Closed Loop System in z-plane Using Bilinear Transformation.....	5-16
✓	Syllabus Topic : Steady-State Error.....	5-17
5.8	Steady-State Errors.....	5-17
✓	Syllabus Topic : Error Constants.....	5-18
5.8.1	Error Constants.....	5-18
5.9	Sums on Cascading G(s) and Zero Order Hold.....	5-18
5.10	Exam Pack (University and Review Questions).....	5-24
•	Chapter Ends	5-26

Module 6

Chapter 6 : Design of Digital Compensators 6-1 to 6-8

6.1	Transient Response on the Z-plane.....	6-1
6.1.1	Transient Response Specifications (May 16).....	6-1
✓	Syllabus Topic : Gain Design on Z Plane for Transient Response using Root Locus.....	6-3
6.2	Gain Design on Z Plane for Transient Response using Root Locus.....	6-3
✓	Syllabus Topic : Stability Design by Root Locus.....	6-3
6.3	Stability Design by Root Locus.....	6-3
✓	Syllabus Topic : Cascade Compensation (Design of Digital Lead, Lag and Lag-Lead Compensator) of Digital System using s-Plane.....	6-4
6.4	Cascade Compensation (Design of Digital Lead, Lag and Lag-Lead Compensator) of Digital System using s-Plane (Dec. 16).....	6-4
6.4.1	Advantages of the Bode Diagram Approach to the Design.....	6-4
6.4.2	Cascade Compensation.....	6-5
✓	Syllabus Topic : Implementing the Digital Compensator.....	6-6
6.5	Implementing the Digital Compensator (Dec. 17).....	6-6
6.5.1	Digital Cascade Compensator Implementation.....	6-7
6.6	Exam Pack (University and Review Questions).....	6-8
•	Chapter Ends	6-8
•	Annexure 1	A-1
•	Appendix A	A-1 to A-8
