

Unit I

Chapter 1 : Introduction to Wireless Channel

1-1 to 1-36

Syllabus : Introduction, Free space propagation model, Ground reflection scenario, Hata model and Receiver-Noise computation. Channel estimation techniques and Diversity in wireless communications.

1.1 Wireless Communication 1-2

 1.1.1 Need of Wireless Communication 1-2

 1.1.2 Wired and Wireless Networks 1-3

 1.1.3 Wireless Communication System 1-3

 1.1.4 Signal Transmission 1-4

 1.1.5 Path Loss of Radio Signals 1-4

 1.1.6 Types of Wave Propagation 1-5

1.2 Mobile Radio Propagation..... 1-5

 1.2.1 Blocking or Shadowing 1-6

 1.2.2 Reflection 1-6

 1.2.3 Refraction 1-6

 1.2.4 Scattering 1-6

 1.2.5 Diffraction 1-7

 1.2.6 Signal Attenuation 1-7

 1.2.7 Multipath Propagation..... 1-8

 1.2.8 Fading 1-8

 1.2.9 Diversity Reception 1-9

 1.2.10 Merits of Wireless Communication 1-9

 1.2.11 Demerits of Wireless Communication.....1-10

 1.2.12 Applications of Wireless Communication.....1-10

1.3 The Wireless Channel1-10

 1.3.1 Radio Frequency Waves1-10

 1.3.2 Important Properties of RF Waves 1-10

 1.3.3 Applications 1-11

1.4 Wireless Generations 1-11

 1.4.1 First Generation : Analog Voice 1-11

 1.4.2 Second Generation : Digital Voice ..1-12

 1.4.3 Third Generation : Digital Voice and Data 1-13

 1.4.4 Fourth Generation (4G) 1-14

1.5 5G and Above Wireless Networks 1-14

 1.5.1 Why 5G ?..... 1-14

 1.5.2 Features of 5G 1-15

 1.5.3 Features of Fifth Generation 1-15

 1.5.4 Expectations in 5-G Network 1-15

 1.5.5 Technologies of 5G 1-15

 1.5.6 Advantages of 5-G Technology 1-15

 1.5.7 Applications of 5G 1-16

1.6 Multipath Fading 1-16

1.7 Propagation Models for Wireless Channels 1-17

1.8 Free Space Propagation Model 1-17

 1.8.1 Friis Free Space Equation 1-18

 1.8.2 EIRP 1-18

 1.8.3 Path Loss 1-19

 1.8.4 Validity of Friis Model 1-19

 1.8.5 Fraun-hofer Region 1-19

 1.8.6 Received Power in Terms of Reference Distance 1-19

1.9 Ground Reflection (Two Ray) Model 1-23

 1.9.1 Advantages of Two Ray Model 1-25

 1.9.2 Disadvantage of Two Ray Model 1-25

1.10 Outdoor Propagation Models 1-27

 1.10.1 Okumura Propagation Model 1-27

1.10.2 Hata Model1-29	2.4 OFDM Operation2-7
1.11 Receiver-Noise Computation1-30	2.4.1 Cyclic Prefix in OFDM2-8
1.12 Channel Estimation in Wireless Systems1-30	2.4.2 OFDM Transmitter with Cyclic Prefix 2-10
1.13 Diversity in Wireless Communication1-32	2.4.3 OFDM receiver with Cyclic Prefix 2-11
1.14 Diversity Techniques1-32	2.4.4 Impact of Cyclic Prefix on Data Rate 2-12
1.14.1 Microscopic Diversity1-33	2.5 OFDM Design Example 2-13
1.14.2 Macroscopic Diversity1-33	2.5.1 Bit-Error Rate (BER) for OFDM 2-13
1.14.3 Space Diversity1-34	2.5.2 Advantages of OFDM 2-14
1.14.3.1Space Diversity Reception Methods1-34	2.5.3 Disadvantages of OFDM 2-15
1.14.3.2Advantages of Space Diversity1-35	2.6 Introduction to Multi-antenna Technologies 2-15
1.14.3.3Disadvantages Space Diversity1-35	2.7 Smart Antennas / Intelligent Antennas 2-15
1.14.4 Polarization Diversity1-35	2.7.1 Principle of Smart Antenna 2-16
1.14.5 Frequency Diversity1-35	2.7.2 Functions of Smart Antenna 2-16
1.14.6 Time Diversity1-35	2.7.3 Types of Smart Antenna Systems 2-17
• Review Questions1-36	2.7.4 Features of Smart Antennas 2-18
Unit II	
Chapter 2 : Orthogonal Frequency Division Multiplexing 2-1 to 2-28	
Syllabus : Introduction, Motivation and Multicarrier basics, OFDM example, Bit error rate for OFDM.	
Multiple-Input Multiple-Output Wireless Communications : Introduction to MIMO wireless communications, MIMO system model and MIMO-OFDM.	
2.1 Introduction to OFDM 2-2	2.8 Multi-antenna Techniques 2-19
2.2 Motivation and Multicarrier Basics 2-2	2.9 MIMO (Multiple Input Multiple Output) Systems 2-20
2.2.1 Multicarrier Transmission 2-3	2.9.1 A 2 x 2 MIMO 2-21
2.3 Orthogonal Frequency Division Multiplexing (OFDM) 2-5	2.9.2 Parameters for Maximum Throughput 2-22
2.3.1 Orthogonality 2-5	2.9.3 Space Time Codes (STCs) 2-22
2.3.2 Assigning the Subcarriers 2-6	2.10 MIMO Model 2-22
2.3.3 Generation of OFDM Signals 2-7	2.10.1 SIMO System Model 2-23
2.3.4 OFDM-PAPR (OFDM-Peak-to-peak Average Power Ratio) 2-7	

2.10.2 MISO System Model2-23

2.10.3 SISO System Model2-24

2.10.4 MIMO System Model2-24

2.10.5 Advantages of MIMO2-24

2.10.6 Disadvantages of MIMO2-25

2.10.7 Applications of MIMO2-25

2.11 MIMO-OFDM2-25

2.11.1 MIMO OFDM Transmitter2-25

2.11.2 MIMO OFDM Receiver2-26

2.11.3 Advantages of MIMO-OFDM2-27

2.11.4 Disadvantages of MIMO-OFDM2-28

2.11.5 Applications of MIMO-OFDM2-28

• **Review Questions2-28**

Unit III

Chapter 3 : Introduction to Mobile Communication

3-1 to 3-48

Syllabus : Introduction to cellular service progression, Cell geometry, Overview of cellular mobile and Network architecture, Cellular radio system design, Frequency assignments, Frequency reuse channels, Concept of cell splitting and Cell sectoring, Significance of handover in cellular systems with handoff algorithms and roaming.

3.1 Evolution of Mobile Communications 3-2

3.2 Growth of Cellular Communication 3-2

3.3 Cellular Wireless Networks 3-3

3.3.1 Cellular Telephone System 3-4

3.4 Structure of Cellular Phone System 3-5

3.4.1 Advantages of Cellular Concept 3-6

3.4.2 Important Definitions 3-7

3.5 Cell Geometry 3-8

3.6 2G Standards 3-9

3.6.1 Evolution to 2.5G Mobile Radio Networks 3-10

3.6.2 Evolution for 2.5-G TDMA Standards 3-12

3.6.2.1 HSCSD for 2.5-G GSM 3-12

3.6.2.2 GPRS for 2.5- G GSM and IS-136 3-12

3.6.2.3 EDGE for 2.5-G GSM and IS-136 3-14

3.6.3 IS-95 B for 2.5-G CDMA 3-15

3.7 Evolution from 2G to 3G Cellular Networks 3-16

3.8 Cellular Service Progression 3-16

3.9 Frequency Reuse 3-16

3.9.1 Advantages of Frequency Reuse 3-17

3.9.2 Frequency Reuse Schemes 3-17

3.9.3 Analysis of Frequency Reuse Concept 3-17

3.9.4 Capacity of Cellular System (C) 3-18

3.9.5 Frequency Reuse Distance 3-18

3.9.6 Selection of Cluster Size 3-20

3.10 Channel Assignment Strategies 3-26

3.10.1 Fixed Channel Assignment (FCA) 3-26

3.10.2 Dynamic Channel Assignment (DCA) 3-26

3.10.3 Hybrid Channel Assignment 3-27

3.10.4 Difference between FCA and DCA 3-27

3.11 Hand Off / Handover 3-28

3.11.1 Handoff Strategies 3-28

3.11.2 Dwell Time 3-29

3.11.3 Different Types of Hand Offs 3-29

3.11.4 Cell Dragging 3-31

3.11.5 Comparison of Hard and Soft Handoffs 3-31

3.11.6 Comparison of Delayed and Queued Handoffs 3-32

3.11.7 Umbrella Cell Approach3-32

3.11.8 Prioritizing Handoffs3-32

3.12 Interference and System Capacity3-33

3.12.1 Co-channel Interference and System Capacity3-34

3.12.2 The S/I Ratio of a Mobile System3-35

3.12.3 Channel Planning for Wireless Systems3-39

3.12.4 Adjacent Channel Interference3-39

3.12.5 Power Control for Reducing Interference3-40

3.13 Improving Coverage and Capacity in Cellular Systems3-40

3.13.1 Cell Splitting3-41

3.13.2 Cell Sectoring3-43

3.13.3 Repeaters for Range Extension3-45

3.13.4 A Microcell Zone Concept3-46

3.13.5 Comparison between Cell Sectoring and Cell Splitting3-46

3.13.6 Types of Cells3-47

- **Review Questions3-47**

Unit IV

Chapter 4 : Wireless System Planning 4-1 to 4-16

Syllabus : Link-budget analysis, Tele-traffic theory, Tele-traffic system model and steady state analysis.

4.1 Link Budget Analysis 4-2

4.1.1 Path Loss 4-2

4.1.2 Link Budget 4-2

4.2 Teletraffic Theory 4-2

4.2.1 Grade of Service (GOS) 4-4

4.2.2 Blocking Probability 4-4

4.2.3 Traffic Distribution Over Trunks of a Group 4-5

4.3 Traffic Measurement4-6

4.3.1 Mathematical Model4-6

4.3.2 Markov Chain4-7

4.4 Lost Call System4-8

4.4.1 GoS and Blocking Probability in Lost Call System 4-10

4.5 Traffic Performance 4-11

4.6 Loss Systems in Tandem 4-11

4.7 Queuing System 4-12

4.7.1 Second Erlang Distribution4-12

4.7.2 Probability of Delay (Erlang’s Delay Formula) 4-13

4.7.3 Finite Queue Capacity 4-13

4.7.4 System with a Single Server 4-14

4.7.5 Queues in Tandem 4-14

4.8 Steady-State Analysis 4-14

- **Review Questions.....4-16**

Unit V

Chapter 5 : Wireless and Mobile Technologies and Protocols and their Performance Evaluation 5-1 to 5-64

Syllabus : Introduction, Wireless and mobile technologies, LTE-advanced, 5G – Architecture, Wireless local area network and Simulations of wireless networks.

5.1 Evolution of Mobile Generations5-3

5.2 Second Generation Cellular Networks5-4

5.3 Global System for Mobile (GSM)5-4

5.4 GSM System Architecture5-5

5.4.1 Detail Architecture of GSM5-5

5.4.2 Various Subsystems in GSM5-7

5.4.3 MS (Mobile Station)5-7

5.4.4 BSS (Base Station Subsystem)5-7

5.4.5	NSS (Network Switching Subsystem)	5-8	5.9.6	Advantages of GPRS	5-21
5.4.6	OMSS : Operation and Maintenance Subsystem	5-10	5.9.7	Disadvantages of GPRS	5-21
5.4.7	Characteristics / Features of GSM Standard	5-10	5.9.8	Applications of GPRS	5-21
5.5	GSM Signalling Protocol Architecture	5-11	5.9.9	Comparison of GSM and GPRS	5-21
5.5.1	GSM Interfaces	5-12	5.10	EDGE	5-22
5.5.2	Mobile Station-Base Transceiver Station Signaling Protocols	5-12	5.10.1	GSM EDGE Network Architecture	5-23
5.5.3	Abis Interface / Base Transceiver Station (BTS)-Base Station Controller (BSC) Signaling Protocols	5-13	5.10.2	EDGE Air Interface	5-23
5.5.4	A Interface / Base Station Controller (BSC) – Mobile Switching Centre (MSC) Signaling Protocols	5-14	5.10.3	Benefits of EDGE	5-24
5.5.5	GSM Specifications / GSM air Interface	5-14	5.10.4	Applications of EDGE	5-24
5.5.6	GSM Frequency Spectrum	5-14	5.10.5	Comparison of EDGE and GPRS	5-24
5.6	GSM Services	5-15	5.10.6	Evolution from 2G to 3G Cellular Networks	5-24
5.6.1	Teleservices	5-15	5.11	3G Mobile Technologies	5-25
5.6.2	Data Services / Bearer services	5-16	5.11.1	3GPP Releases Overview	5-27
5.6.3	Bearer Services	5-16	5.12	Universal Mobile Telecommunication Service (UMTS) or W-CDMA	5-28
5.6.4	Supplementary Services	5-17	5.12.1	Features of UMTS	5-29
5.6.5	Applications of GSM	5-17	5.13	UMTS Architecture	5-29
5.7	Advantages of GSM	5-17	5.13.1	UMTS Domain and Interfaces	5-29
5.8	Disadvantages of GSM	5-17	5.13.2	UTRA-Network (UTRAN) Architecture	5-30
5.9	GPRS - General Packet Radio Service	5-18	5.13.3	Core Network of UMTS (UMTS Network Architecture)	5-32
5.9.1	Features of GPRS	5-18	5.13.4	UMTS Specifications / UMTS Air Interface Specification	5-32
5.9.2	GPRS Architecture	5-19	5.13.5	Advantages of UMTS	5-32
5.9.3	GPRS Protocol Stack / GPRS Protocol Reference Model	5-20	5.13.6	Disadvantages of UMTS	5-33
5.9.4	GPRS Services	5-20	5.13.7	UMTS Applications	5-33
5.9.5	Characteristics of GPRS	5-21	5.13.8	Comparison of UMTS and GSM	5-33
			5.13.9	High Speed Downlink Packet Access (HSDPA)	5-33
			5.13.10	High Speed Uplink Packet Access (HSUPA)	5-33

5.13.11 High speed Packet Access (HSPA) ...	5-33	5.29.4 IEEE 802.11a OFDM	5-51
5.13.12 High speed Packet Access Plus (HSPA+)	5-34	5.29.5 IEEE 802.11b HR-DSSS	5-52
5.14 Fourth Generation (4G) LTE	5-34	5.29.6 IEEE 802.11d	5-53
5.14.1 LTE and LTE-A Technologies	5-36	5.29.7 IEEE 802.11e	5-53
5.15 Introduction to LTE	5-36	5.29.8 IEEE 802.11g OFDM	5-53
5.16 LTE Network Structure (Architecture)	5-36	5.29.9 IEEE 802.11h	5-53
5.16.1 LTE Radio Protocol Architecture	5-38	5.29.10 IEEE 802.11i	5-53
5.17 LTE - Advanced (LTE - A)	5-39	5.29.11 IEEE 802.11n OFDM	5-53
5.18 LTE-A Key Technologies	5-39	5.29.12 IEEE 802.11r	5-53
5.18.1 Carrier Aggregation	5-39	5.29.13 IEEE 802.11u	5-53
5.18.2 Enhanced MIMO	5-40	5.29.14 Use of IEEE 802.11 standards	5-53
5.18.3 Wireless Relays	5-40	5.30 Simulation of Wireless Networks	5-55
5.18.4 Coordinated Multipoint Transmission and Reception	5-40	5.31 Wireless Network Simulation Tools	5-55
5.19 LTE-A Radio Network Architecture	5-41	5.31.1 Network Simulator 2	5-55
5.20 LTE-A Radio Protocol Architecture	5-42	5.31.2 Optimized Network Engineering Tool (OPNET)	5-55
5.21 Comparison of LTE and LTE-A	5-43	5.31.3 OMNeT++	5-56
5.22 Fifth Generation (5G)	5-43	5.31.4 GloMoSim	5-58
5.23 Opportunities in 5G Network	5-44	5.31.5 LTE-Sim	5-58
5.24 Challenges for 5G Networks	5-45	5.32 Mobility Models	5-58
5.25 Requirements for 5G Networks	5-45	5.32.1 Random-Based Mobility Model	5-59
5.26 Functional Architecture of 5G	5-46	5.32.2 Indoor Mobility Models	5-59
5.27 Open Wireless Architecture of 5G / Protocol Stack	5-47	5.32.3 Random Walk	5-59
5.28 Advantages of 5G Technology	5-48	5.32.4 Random Waypoint Model	5-60
5.28.1 Disadvantages of 5G Technology	5-48	5.33 Outdoor Mobility Models	5-61
5.28.2 Applications of 5G	5-48	5.33.1 Gauss-Markov Mobility Model	5-61
5.29 Wireless Local Area Network (WLAN)	5-48	5.34 Spatial Dependency Models	5-62
5.29.1 IEEE 802.11 FHSS	5-49	5.35 Geographic Restriction Model	5-62
5.29.2 IEEE 802.11 DSSS	5-50	5.36 Metrics of Mobility Models	5-62
5.29.3 IEEE 802.11 Infrared	5-51	5.37 Comparison of Various Mobile System Generations	5-63
		• Review Questions.....	5-64

Unit VI

Chapter 6 : Performance Analysis Issues 6-1 to 6-20

Syllabus : Introduction to network coding, Basic hamming code and Significance of information theory Interference suppression and Power control. MAC layer scheduling and Connection admission in mobile communication.

6.1	Network Coding	6-2	6.5.4	Centralized Power Control	6-12
6.1.1	Functions of Network Coding	6-2	6.5.5	Distributed Power Control	6-12
6.1.2	Types of Network Codes	6-2	6.5.6	Power Saving Mechanism	6-12
6.1.3	Applications of Network Coding	6-3	6.6	Medium Access Control (MAC)	6-13
6.1.4	Challenges	6-3	6.7	MAC Protocol Issues	6-13
6.2	Basic Hamming Code	6-3	6.7.1	Hidden Terminal Problem	6-13
6.2.1	Detection and Correction of Errors ...	6-6	6.7.2	Exposed Station Problem	6-14
6.3	Significance of Information Theory	6-9	6.7.3	Reliability	6-15
6.3.1	Applications of Information Theory	6-10	6.7.4	Collision Avoidance	6-15
6.4	Interference Suppression	6-11	6.7.5	Congestion Control	6-15
6.5	Power Control	6-11	6.7.6	Energy Efficiency	6-16
6.5.1	Power Control	6-11	6.7.7	Other MAC Issues	6-16
6.5.2	Open-loop Power Control	6-11	6.8	MAC Sub-layer	6-16
6.5.3	Closed Loop Power Control	6-12	6.8.1	RTS and CTS Messages	6-17
			6.8.2	The Retry Counters	6-17
			6.8.3	Different Time Intervals	6-17
			6.8.4	Distributed Co-ordination Function (DCF)	6-17
			6.8.5	Hidden Station Problem	6-19
			6.8.6	Point Co-ordinate Function (PDF) ...	6-19
				Review Questions.....	6-20
