

<b>Chapter 1 : Complex Functions</b>		<b>1-41</b>
1.1	Complex Numbers (Review) .....	1-1
1.2	Polar Form of Complex Numbers.....	1-2
1.2.1	Product and Division in Polar Form.....	1-3
1.2.2	De Moivre's Formula.....	1-3
1.3	Regions in the Complex Plane.....	1-9
1.4	Functions of a Complex Variable.....	1-10
1.5	Limits, Continuity .....	1-11
1.6	Derivative.....	1-12
1.6.1	Cauchy–Riemann Equations .....	1-13
1.6.2	Cauchy- Riemann Equations in Polar Form.....	1-16
1.7.	Analytic Functions.....	1-18
1.8.	Harmonic Functions.....	1-23
1.9	Elementary Analytic Functions .....	1-29
1.10	Conformal Mapping .....	1-38
1.10.1	Möbius Transformation.....	1-39
<b>Chapter 2 Complex Integration</b>		<b>2-1 to 2-29</b>
2.1	Contour Integrals (Line Integrals).....	2-1
2.1.1	Upper Bounds for Contour Integrals.....	2-7
2.1.2	Path Independence of Line Integral .....	2-9
2.2	Cauchy – Goursat Theorem .....	2-11
2.3.	Cauchy Integral Formula.....	2-12
2.4.1	Extension of Cauchy Integral Formula.....	2-15
2.5	Liouville's Theorem.....	2-18
2.6	Maximum Modulus Theorem.....	2-18
2.7	Sequence .....	2-19
2.8	Series.....	2-19
2.9	Power Series.....	2-22
2.9.1	Determination of the Radius of convergence from the coefficients.....	2-22
2.10	Functions Given by Power Series.....	2-24
2.11	Taylor and Maclaurin Series.....	2-24

<b>Chapter 3 : Laurent Series and Singularities</b>		<b>3-1 to 3-28</b>
3.1	Laurent series.....	3-1
3.2	Singularities.....	3-6
3.3	Zeros of Analytic Functions.....	3-7
3.4	Residue.....	3-8
3.5	Cauchy's Residue Theorem .....	3-12
3.6	Residue Integration of Real Integrals.....	3-19
3.6.1	Improper Integrals of Real Functions .....	3-19
3.6.2	Method to evaluate improper integrals of certain type .....	3-20
3.6.3	Definite Integrals Involving Sines and Cosines .....	3-24
<b>Chapter 4 First Order Partial Differential Equations</b>		<b>4-1 to 4-28</b>
4.1	Partial Differential Equation.....	4-1
4.1.1	Formation of Partial Differential Equation.....	4-1
4.2	Lagrange's method for the solution of the quasi – linear first order partial differential equation of the form $Pp + Qq = R$ .....	4-6
4.3	Nonlinear Partial Differential Equations of First Order .....	4-15
4.4	Standard Forms of Nonlinear Partial Differential Equations of First Order.....	4-20
<b>Chapter 5 : Higher Order Partial Differential Equations</b>		<b>5-1 to 5-36</b>
5.1	Homogeneous Linear Partial Differential Equations and their Solutions.....	5-1
5.1.1	Superposition Principle.....	5-1
5.2	Solution of Non-homogeneous Linear Partial Differential Equations.....	5-3
5.2.1	General Method for Finding P.I.....	5-10
5.3	Method of Separation of Variables.....	5-13
5.4	Classification of Second Order PDE.....	5-15
5.5	Modeling: Wave Equation .....	5-16
5.5.1	D'Alembert's Solution of the Wave Equation.....	5-22
5.5.2	D'Alembert's Solution satisfying the Initial conditions.....	5-23
5.6	Modeling: Heat Equation.....	5-25
5.7	Modeling: Laplace Equation Steady-State Two-Dimensional Heat Flow .....	5-34
<b>Appendix : Images of Regions Under Conformal Mapping.....</b>		<b>A-1 to A-6</b>
