Chapter 1 : Basics of Stress and Strain 1-1 to 1-15

Syllabus : Basics of stress and strain : 3 -D state of stress (Concept only) Normal/axial stresses: Tensile & compressive Stresses: Shear and complementary shear Strains: Linear, shear, lateral, thermal and volumetric. Hooke's law, Elastic Constants: Modulus of elasticity, Poisson's ratio, Modulus of rigidity and bulk modulus and relations between them with derivation.

1.1 Three Dimensional State of Stress.....1-2

1.2 Stress and Types of Stresses.....1-2

1.2.1 Stress 1-2

1.2.2 Types of Stresses 1-2

1.2.3 Difference Between Compressive Stress and Crushing Stress 1-7

1.2.4 Difference Between Bearing Pressure and Crushing Stress 1-8

1.2.5 Difference Between Torsional Shear Stress and Transverse Shear Stress 1-8

1.3 Strain and Types of Strains.....1-9

1.3.1 Strain 1-9

1.3.2 Types of Strains 1-9

1.4 Stress - Strain Diagram and Hooke's Law 1-10

1.5 Poisson's Ratio.....1-11

1.6 Volumetric Strain 1-11

1.7 Modulus of Elasticity and Modulus of Rigidity .1-11

1.8 Thermal Stress and Strain.....1-12

1.9 Bulk Modulus.....1-12

1.9.1 Relation Between Bulk Modulus (K), Modulus of Elasticity (E) and Modulus of Rigidity (G) 1-13

1.10 List of Formulae.....1-14

Chapter 2 : Moment of Inertia of Planer Cross Sections 2-1 to 2-7

Syllabus : Moment of inertia of planar cross -sections: Derivation of equation of moment of inertia of standard lamina using first principle, Parallel & perpendicular axes theorems, polar moment of inertia,

2.1 Moment of Inertia (Area Moment of Inertia) 2-2

2.2 Perpendicular and Parallel Axes Theorems.....2-2

2.2.1 Perpendicular Axis Theorem 2-2

2.2.2 Parallel Axis Theorem 2-3

2.3 Derivation of Moment of Inertia for Standard Lamina 2-3

2.3.1 Moment of inertia for Rectangular Section 2-3

2.3.2 Moment of Inertia of Circular Section 2-4

2.3.3 Moment of Inertia of Hollow Circular Section 2-4

2.3.4 Moment of Inertia of Triangular Section 2-4

2.3.5 Moment of Inertia of Semi-Circular Section 2-5

2.4 List of Formulae.....2-6

Chapter 3 : Flexural Stresses 3-1 to 3-10

Syllabus : Flexural stresses – Theory of simple bending, Assumptions, derivation of equation of bending, neutral axis, determination of bending stresses, section modulus of rectangular & circular (solid & hollow), I,T, Angle, channel sections

3.1 Theory of Simple Bending 3-2

3.1.1 Assumptions in Theory of Simple Bending 3-2

3.2 Derivation of Equation of Bending 3-2

3.3 Neutral Axis 3-3

3.4 Distribution of Bending Stress Across Section and Maximum Bending Stress 3-3

3.5 Section Modulus.....3-4

3.5.1 Section Modulus of Different Cross-Sections 3-4

3.6 List of Formulae.....3-10

Chapter 4 : Torsion 4-1 to 4-5

Syllabus : Torsion: Derivation of equation of torsion, Assumptions, application of theory of torsion equation to solid & hollow circular shaft, torsional rigidity

4.1 Equation of Torsion 4-2

4.1.1 Assumptions in Equation of Torsion 4-2

4.1.2 Derivation of Equation of Torsion 4-2

4.2 Application of Theory of Torsion Equation 4-3

4.2.1 Application of Theory of Torsion Equation to Solid Shaft 4-3

4.2.2 Application of Theory of Torsion Equation to Hollow Shaft 4-3

4.3 Torsional Rigidity....4-4

4.4 List of Formulae 4-5

Chapter 5 : Introduction to Machine Design 5-1 to 5-31

Syllabus : Introduction to Machine Design: Design procedure, Selection of preferred sizes, Aesthetic and Ergonomic considerations in Design, Manufacturing considerations in Design, Mechanical Properties of Materials, Effect of Alloying elements and heat treatment on properties of steels, Materials Selection in Machine Design, Standardization

5.1 Introduction to Machine Design 5-2

5.2 Design Procedure (Design Process) 5-2

5.3 Design Considerations....5-3

5.4 Aesthetic Considerations in Design....5-4

5.4.1 Aesthetics 5-4

5.4.2 Importance of Aesthetic Considerations in Design 5-4

5.4.3 Guidelines in Aesthetic Design 5-5

5.4.4 Aspects of Aesthetic Design 5-5

5.5 Ergonomic Considerations in Design 5-7

5.5.1 Ergonomics 5-7

5.5.2 Areas Covered Under Ergonomics 5-7

5.5.3 Communication between Man (User) and Machine 5-7

5.5.4 Working Environment 5-9

5.5.5 Practical Example of Ergonomics in Design 5-10

5.5.6 Ergonomics, Aesthetics and Performance 5-11

5.6 Manufacturing Considerations in Design (Principles to be Followed in Design for Manufacture) 5-11

5.7 Design Considerations for Castings 5-12

5.8 Design Considerations for Forgings 5-14

5.9 Standards and Codes in Design 5-15

5.9.1 Advantages of Standardization 5-15

5.9.2 Types (Categories) of Standards 5-15

5.10 Preferred Series 5-15

5.10.1 Advantages of Preferred Series 5-16

5.11 Factors Influencing Selection of Material 5-17

5.12 Mechanical Properties of Materials....5-18

5.13 Classification of Engineering Materials 5-21

5.14 Classification of Metals and their Alloys 5-22

5.15 Ferrous Alloys 5-22

5.15.1 Cast Iron 5-22

5.15.2 Alloy Cast Irons 5-23

5.15.3 Plain Carbon Steels 5-23

5.15.4 Alloy Steels 5-25

5.15.5 High Alloy Steels 5-28

5.15.6 Cast Steels 5-28

5.16 Non-Ferrous Metals and Alloys 5-28

5.16.1 Aluminium Alloys 5-29

5.16.2 Copper Alloys 5-29

5.16.3 Babbitts (White Metals) 5-30

5.17 Heat Treatment of Steels 5-30

5.18 Material Selection Process 5-31

Chapter 6 : Design Against Static Load

6-1 to 6-77

Syllabus : Design Against Static Load : Concepts of stresses and Strain, Combinations of Axial, Shear, Torsional and Bending loads; Theories of Failures: Distortion energy (von Mises), Maximum-Shear stress, Maximum Principal stress, Selection and Use of theories of failures; Factor of safety, Contact stresses, Crushing and Bearing stress. Application Problems: Eccentric Loading; Cotter and Knuckle Joints; Design and analysis of levers: Cranked, Bell crank, Foot, Rocker arm.

6.1 Types of Loads 6-2

6.2 Types of Stresses 6-2

6.2.1 Difference between Compressive Stress and Crushing Stress 6-6

6.2.2 Difference between Bearing Pressure and Crushing Stress 6-7

6.2.3 Difference between Torsional Shear Stress and Transverse Shear Stress 6-7

6.3 Types of Strains 6-8

6.4 Modulus of Elasticity and Modulus of Rigidity ... 6-8

6.5 Factor of Safety 6-9

6.5.1 Factors to be Considered in Selection of Factor of Safety 6-9

6.5.2 Guideline Values of Factor of Safety 6-9

6.6 Service Factor or Application Factor 6-10

6.7 Modes of Failure 6-12

6.8 Theories of Failure 6-12

6.9 Principal Stresses and Maximum Shear Stress ... 6-13

6.9.1 Principal (Normal) Stresses 6-13

6.9.2 Maximum Shear Stress 6-13

6.9.3 Summary of Principal (Normal) Stress and Maximum Shear Stress 6-14

6.9.4 Principal Stresses and Maximum Shear Stress By Mohr's Circle 6-14

6.10 Theories of Failure for Brittle Materials 6-14

6.10.1 Maximum Principal (Normal) Stress Theory (Rankine's Theory) 6-14

6.10.2 Coulomb-Mohr Theory 6-15

6.11 Theories of Failure for Ductile Materials 6-15

6.11.1 Maximum Shear Stress Theory (Tresca And Guest Theory) 6-15

6.11.2 Distortion Energy Theory (Von Mises And Hencky Theory) 6-16

6.11.3 Coulomb-Mohr Theory 6-17

6.12 Selection and Use of Theories of Failure 6-17

6.12.1 Selection of Theories of Failure for Design of Given Mechanical Component 6-18

6.13 Design of Simple Machine Elements 6-24

6.14 Eccentric Loading 6-24

6.14.1 Eccentricity About One Axis 6-24

6.14.2 Eccentricity About Two Axes 6-25

6.15 Cotter Joint (Socket And Spigot Joint) 6-29

6.15.1 Design of Cotter Joint 6-30

6.15.2 Summary of Design of Cotter Joint 6-33

6.15.3 Sleeve and Cotter Joint 6-44

6.15.4 Design of Sleeve and Cotter Joint 6-44

6.16 Knuckle Joint 6-46

6.16.1 Design of Knuckle Joint 6-47

6.16.2 Summary of Design of Knuckle Joint 6-49

6.16.3 Difference Between Cotter Joint and Knuckle Joint 6-50

6.17 Levers 6-61

6.17.1 Types of Levers 6-62

6.17.2 Design of Angular Lever (Rocker Arm for I.C. Engine) 6-63

6.17.3 Design of Bell Crank Lever 6-67

6.17.4 Design of Lever for Safety Valve 6-72

6.18 List of Formulae 6-75

Chapter 7 : Beams and Columns 7-1 to 7-26

Syllabus : Beams and Columns: Different types of supports / end conditions, Revision of Stresses in beams: Effect of Section, Orientation, and type of loading; Deflection of beams for different loading conditions. Compressive axial loading of columns and struts, Slenderness ratio, Compressive stress and Buckling of members, Effect of end conditions; Euler's Formula, Applications, validity and limitations; Rankine's Formula, stresses in curved beam

7.1 Introduction to Beams, Columns and Struts 7-2
7.1.1 Difference Between Beam, Column and Strut 7-2
7.2 Types of Supports (End Conditions) of Beam.....7-3
7.3 Types of Beams 7-3
7.4 Types of Loads on Beam 7-4
7.5 Types (Modes) of Failures of Beam 7-4
7.6 Stresses in Beams 7-5
7.6.1 Bending Stress in Beams 7-5
7.6.2 Effect of Section and Orientation on Bending Stress 7-7
7.6.3 Transverse Shear Stress in Beams 7-7
7.7 Deflection of Beam by Castigliano's Method 7-12
7.7.1 Strain Energy for Different Loads 7-12
7.8 Buckling of Columns.....7-16
7.8.1 Difference Between Compression Failure and Buckling Failure 7-16
7.9 Determination of Buckling or Critical Load.....7-16
7.9.1 Euler's Formula 7-16
7.9.2 J. B. Johnson's Formula 7-19
7.9.3 Rankine's Formula 7-19
7.10 List of Formulae 7-25

Chapter 8 : Shafts and Keys 8-1 to 8-34

Syllabus : Shafts and Keys: Design of solid and hollow circular shaft subjected to torque and combined loading for rigidity and stiffness; Design of Keys and splines.

8.1 Introduction to Shafts 8-2
8.1.1 Types of Shafts 8-2
8.1.2 Axle 8-2
8.1.3 Difference between Shaft, Spindle and Axle 8-3
8.1.4 Materials for Shafts 8-3
8.2 Design of Shaft.....8-3
8.3 Design of Shaft Based on Strength.....8-3
8.3.1 Design of Solid Shaft by Theories of Failures 8-3
8.3.2 Design of Hollow Shaft by Theories of Failure ...8-5
8.3.3 A.S.M.E. Code for Design of Shaft 8-5
8.3.4 Summary of Design of Shaft Based on Strength .8-6
8.4 Design of Shaft Based on Rigidity and Deflection 8-7
8.4.1 Design of Shaft Based on Torsional Rigidity 8-7
8.4.2 Design of Shaft Based on Lateral Rigidity 8-7
8.5 Advantages, Limitations and Applications of Hollow Shafts.....8-9
8.6 Design of Axle 8-9
8.7 Keys.....8-9
8.7.1 Functions of Key 8-9
8.8 Classification of Keys 8-10
8.8.1 Sunk Keys 8-10
8.8.2 Saddle Keys 8-11
8.8.3 Tangent Keys 8-11
8.8.4 Kennedy Keys 8-11
8.8.5 Round Keys and Taper Pins 8-11
8.8.6 Splines 8-12
8.9 Design of Sunk (Parallel and Taper) Keys 8-12
8.9.1 Procedure for Selection and Design of Sunk (Parallel and Taper) Keys 8-13
8.9.2 Factors to be Considered in Key Selection 8-13
8.10 Design of Kennedy Keys.....8-13
8.11 Design of Splines 8-14
8.11.1 Procedure for Selection and Design of Splines .8-14
8.12 Summary of Design of Keys 8-15
8.13 List of Formulae 8-33

Chapter 9 : Power Screws and Threaded Joints 9-1 to 9-67

Syllabus : Power Screws and Threaded Joints: Forms of thread, Single and Multiple threaded screw, Terminology of power screw, Torque requirement of lifting/lowering, Self-locking, Efficiency of threads, coefficient of friction, design of screw and nut. Basic types of screw fastening, Cap and Set screw, Bolt of Uniform strength, locking devices, Terminology of Screw thread, Bolted Joint: Simple and Eccentric loading, Torque requirement for bolt tightening.

9.1 Introduction 9-2
9.2 Terminology of Power Screw 9-2
9.3 Forms of Threads 9-3
9.4 Torque Analysis of Square Threads 9-5
9.4.1 Torque Required to Raise the Load Against Thread Friction 9-6
9.4.2 Torque Required to Lower the Load Against Thread Friction 9-7
9.4.3 Self-Locking and Over-Hauling Screws 9-8
9.4.4 Screw Efficiency of Square Threads 9-8
9.4.5 Parameters Affecting Screw Efficiency 9-8
9.5 Torque Analysis of Trapezoidal and Acme Threads 9-9
9.5.1 Torque Required to Raise and Lower the Load Against Thread Friction 9-9
9.5.2 Screw Efficiency of Trapezoidal and Acme Threads 9-9
9.6 Collar Friction Torque 9-10
9.7 Total Torque 9-10
9.8 Overall Efficiency of Power Screw 9-10
9.9 Coefficient of Friction 9-11
9.10 Multiple Threaded Screws 9-11
9.11 Stresses in Power Screws 9-16
9.11.1 Stresses in Screw Body 9-16
9.11.2 Stresses in Screw Threads 9-17
9.12 Summary of Stresses in Power Screws 9-18
9.13 Design of Screw Jack 9-21
9.14 Design of C-Clamp 9-29
9.15 Differential Screw 9-32
9.16 Compound Screw 9-33
9.17 Introduction to Threaded Joints 9-36
9.17.1 Purposes of Using Threaded Joints 9-37
9.17.2 Advantages of Threaded Joints 9-37
9.17.3 Limitations of Threaded Joints 9-37
9.17.4 Difference Between Power Screws and Screw Fasteners 9-37
9.18 Various Forms of Threads 9-37
9.19 I.S.O. Metric Screw Threads 9-38
9.20 Type of I.S.O. Metric Screw Threads 9-38
9.20.1 Coarse Threads 9-38
9.20.2 Fine Threads 9-38
9.21 Basic Types of Screw Fasteners 9-40
9.22 Locking Devices 9-41
9.23 Bolt of Uniform Strength 9-42
9.24 Torque Requirement for Bolt Tightening 9-43
9.25 Stresses in Screw Fasteners 9-43
9.25.1 Stresses in Screw Body 9-43
9.25.2 Stresses in Screw Threads 9-44
9.26 Eccentrically Loaded Bolted Joints 9-44
9.27 Eccentric Load in Plane of Bolts 9-44
9.27.1 Effect of Load at Offset from Centre of Gravity of Bolt System 9-45
9.27.2 Procedure for Design of Bolted Joints with Load in Plane of Bolts 9-45
9.28 Eccentric Load Perpendicular to Axes of Bolts 9-49
9.28.1 Effect of Load Perpendicular to Axes of Bolts 9-49
9.28.2 Procedure for Design of Bolted Joints with Load Perpendicular to Axes of Bolts 9-50
9.29 Eccentric Load Parallel to Axes of Bolts 9-52
9.29.1 Effect of Load Parallel to Axes of Bolts 9-52
9.29.2 Procedure for Design of Bolted Joints with Load Parallel to Axes of Bolts 9-52

9.30 Turn Buckle (Coupler) 9-55
9.30.1 Design of Turn Buckle (Coupler) 9-55
9.30.2 Summary of Design of Turn Buckle 9-58
9.31 Elastic Analysis of Bolted Joints Under Tension 9-61
9.31.1 Forces Acting on Each Bolt 9-61
9.31.2 Resultant Tensile Force on Bolt 9-61
9.31.3 Condition for Avoiding Joint Separation 9-62
9.31.4 Stiffnesses of Bolt and Connected Members 9-62
9.32 List of Formulae 9-65

Chapter 10 : Design Against Fluctuating Loads 10-1 to 10-41

Syllabus : Design Against Fluctuating Loads: Stress Concentration, Endurance limit and Fatigue failure, Factors affecting endurance limit, S-N Diagram, Design for reversed stresses and cumulative damage, Fluctuating stresses: Soderberg, Gerber, Goodman and Modified Goodman criteria, Combined stresses

10.1 Stress Concentration 10-2
10.1.1 Causes of Stress Concentration 10-2
10.1.2 Methods (Remedies) of Reducing Stress Concentration 10-2
10.2 Stress Concentration Factors 10-3
10.2.1 Theoretical (Geometric) Stress Concentration Factor (K_t) 10-3
10.2.2 Fatigue Stress Concentration Factor(K_f) 10-3
10.2.3 Notch Sensitivity (Q) 10-3
10.3 Fatigue Load and Fatigue Failure 10-4
10.4 Fluctuating Stresses 10-4
10.4.1 Special Cases of Fluctuating Stresses 10-4
10.4.2 Summary of Fluctuating Stresses 10-5
10.5 Endurance Strength, Endurance Limit and S-N Diagram 10-6
10.5.1 S-N Diagram 10-6
10.6 Relation Between Endurance Limit and Ultimate Tensile Strength of Material 10-7
10.7 Endurance Limit of Mechanical Component 10-7
10.7.1 Endurance Limit (Endurance Strength) Modifying Factors 10-7
10.7.2 Endurance Limit in Shear 10-8
10.8 Design of Components Subjected to Fatigue Loading 10-8
10.9 Design of Components Subjected to Completely Reversed Stresses ($\sigma_M = 0$) 10-9
10.9.1 Design of Components Subjected to Completely Reversed Stresses ($\sigma_m = 0$) for Infinite Life 10-9
10.9.2 Design of Components Subjected to Completely Reversed Stresses ($\sigma_m = 0$) for Finite Life 10-9
10.9.3 Design of Components with Cumulative Damage in Fatigue Failure – Miner's Equation 10-10
10.10 Design of Components Subjected to Fluctuating Stresses ($\sigma_M \neq 0$) for Infinite Life 10-18
10.10.1 Goodman Criterion (Goodman Line) 10-19
10.10.2 Soderberg Criterion (Soderberg Line) 10-19
10.10.3 Gerber Criterion (Gerber Parabola) 10-20
10.10.4 Comparison of Goodman Line, Soderberg Line and Gerber Parabola 10-20
10.11 Modified Goodman Diagram 10-20
10.11.1 Modified Goodman Diagram for Fluctuating Axial or Bending Stresses 10-20
10.11.2 Modified Goodman Diagram for Fluctuating Torsional Shear Stresses 10-21
10.12 Summary of Design of Components Subjected to Fluctuating Stresses ($\sigma_m \neq 0$) for Infinite Life 10-22
10.13 Design of Components Subjected to Fluctuating Stresses ($\sigma_m \neq 0$) for Finite Life 10-34
10.14 Fatigue Design of Components Under Combined Stresses 10-35
10.15 List of Formulae 10-39

❑❑❑
