

2.1.5	Refraction .....	2-4	3.1	Introduction to Optical Network.....	3-2
2.1.6	Refractive Index .....	2-4	3.1.1	Need of Optical Networks .....	3-2
2.1.7	Snell's Law.....	2-5	3.1.2	Advantages of Optical Networks .....	3-2
2.1.8	Dispersion, Diffraction, Absorption and Scattering .....	2-6	3.2	An Optical Network Components / Elements .....	3-2
2.2	Critical Angle ( $\theta_c$ ) .....	2-6	3.3	Optical Amplifiers .....	3-3
2.3	Acceptance Angle and Acceptance Cone .....	2-7	3.3.1	Working Principle of Optical Amplifier .....	3-3
2.3.1	Acceptance Angle $\theta_{in (max)}$ .....	2-7	3.3.2	Features of Optical Amplifiers .....	3-3
2.3.2	Acceptance Cone .....	2-8	3.3.3	Applications of Optical Amplifiers .....	3-3
2.3.3	Relation between $\theta_{in (max)}$ and $\theta_c$ .....	2-8	3.4	Types of Optical Amplifiers .....	3-4
2.3.4	Total Internal Reflection .....	2-9	3.4.1	Erbium-doped Fiber Amplifier (EDFA) .....	3-4
2.4	Numerical Aperture (NA) .....	2-9	3.4.2	Semiconductor Optical Amplifier (SOA) .....	3-5
2.5	Principle of Light Propagation in Optical Fibers .....	2-10	3.4.3	Raman Optical Amplifier .....	3-5
2.5.1	Solved Examples .....	2-10	3.4.4	Comparison of Optical Amplifiers .....	3-5
2.6	Splicing Techniques .....	2-13	3.5	Optical Splitter .....	3-6
2.6.1	Splicing Techniques .....	2-14	3.5.1	Types of Optical Splitters .....	3-6
2.6.2	Fusion Splice .....	2-14	3.5.2	Features of Splitters .....	3-6
2.6.3	Mechanical Splice .....	2-15	3.5.3	Applications of Splitters .....	3-6
2.6.4	Comparison of Fusion Versus Mechanical Splice .....	2-16	3.5.4	Advantages of Splitters .....	3-7
2.6.5	V-Grooved Splices .....	2-17	3.5.5	Disadvantages .....	3-7
2.6.6	Elastic Tube Splice .....	2-18	3.6	Optical Switches .....	3-7
2.6.7	Comparison of V-Groove and Elastic Tube Splices .....	2-18	3.6.1	Types of Optical Switches .....	3-7
2.7	Losses in Optical Fibers .....	2-18	3.6.2	Features of Optical Switch .....	3-7
2.7.1	Classification of Losses .....	2-19	3.6.3	Applications of Optical Switches .....	3-7
2.7.2	Power Loss Due to Attenuation .....	2-19	3.6.4	Advantages of Optical Switches .....	3-8
2.7.3	Absorption Losses .....	2-20	3.6.5	Disadvantages of Optical Switches .....	3-8
2.7.4	Scattering Losses .....	2-20	3.7	Synchronous Optical Network (SONET) .....	3-8
2.7.5	Radiation Losses .....	2-20	3.7.1	Architecture .....	3-8
2.7.6	Coupling Losses .....	2-21	3.7.2	Synchronous Transport Signals .....	3-8
2.7.7	Dispersion Loss .....	2-22	3.7.3	SONET Devices .....	3-9
2.8	Optical Time Domain Reflectometer (OTDR) .....	2-23	3.7.4	Terminals .....	3-9
2.8.1	Measurement of Fiber Attenuation .....	2-24	3.8	Connections .....	3-9
2.8.2	Advantages of OTDR .....	2-25	3.9	SONET Layers .....	3-9
2.8.3	OTDR Specifications .....	2-25	3.9.1	Layer .....	3-10
2.8.4	Applications of OTDR.....	2-26	3.9.2	Line Layer .....	3-10
	• <b>Review Questions</b> .....	<b>2-26</b>	3.9.3	Section Layer .....	3-10
			3.9.4	Photonic Layer .....	3-10
			3.9.5	Relationship between Devices and Layers .....	3-10

**Unit – III**

**Chapter 3 : Optical Network 3-1 to 3-22**

**Syllabus :** Optical network components use and features : Amplifiers, Splitter, Optical switches, WDM : Basic concept, Features. SONET/SDH: Architecture and hierarchy, Ethernet standards of optical network features: IEEE 802.3j, 802.3y, 802.3z.

3.10	SONET Frames .....	3-11
3.10.1	Frame, Byte and Bit Transmission .....	3-11
3.10.2	STS-1 Frame Format .....	3-11
3.11	Overheads .....	3-12
3.11.1	Section Overheads .....	3-12
3.11.2	Line Overheads .....	3-13
3.11.3	Synchronous Payload Envelope (SPE) .....	3-13

3.11.4	Encapsulation	3-14	4.1	Satellite Communication	4-2
3.12	Frame Transmission	3-14	4.1.1	Communication using Satellites	4-2
3.12.1	STS-1	3-14	4.1.2	Principle of Satellite Communication	4-2
3.12.2	Virtual Tributaries	3-14	4.1.3	Block Diagram (Model) of a Satellite Communication System	4-2
3.13	SONET Networks	3-15	4.1.4	Benefits of Satellite Communication	4-3
3.14	Applications of SONET	3-16	4.2	Basic Concepts	4-3
3.15	High Bit Rate Services (STS Multiplexing)	3-16	4.2.1	The Space Segment	4-3
3.16	Wavelength Division Multiplexing (WDM)	3-17	4.2.2	The Earth Segment	4-4
3.16.1	DWDM (Dense WDM)	3-18	4.2.3	Active & Passive Satellites	4-4
3.16.2	Features of Wavelength Division Multiplexing (WDM)	3-18	4.2.4	Passive Satellite	4-4
3.16.3	Advantages of WDM	3-18	4.2.5	Active Satellites	4-4
3.16.4	Disadvantages of WDM	3-19	4.2.6	Comparison of Active and Passive Satellites	4-5
3.16.5	Applications of Wavelength Division Multiplexing	3-19	4.3	Satellite Orbits	4-5
3.17	Ethernet Standards of Optical Network	3-19	4.3.1	Types of Satellite Orbits	4-5
3.18	Physical Layer Implementation of Standard Ethernet	3-19	4.3.2	Geosynchronous Orbit	4-5
3.18.1	Specifications of 802.3j	3-20	4.3.3	Geostationary Orbit	4-6
3.19	Physical Layer Implementation of Fast Ethernet	3-20	4.3.4	Comparison of Geostationary and Geosynchronous Orbits	4-6
3.19.1	Specifications of 802.3u	3-21	4.3.5	Polar Orbits	4-7
3.20	Physical Layer Implementation of Gigabit Ethernet	3-21	4.3.6	Inclined Orbits	4-7
3.20.1	Specifications of 1000 Base-SX (Short wave fibre)	3-21	4.3.7	LEO Orbits	4-7
3.20.2	Specifications of 1000 Base LX (Long Wave Fiber)	3-22	4.3.8	MEO Orbits	4-7
3.20.3	Specifications of 1000 Base CX (Copper STP)	3-22	4.3.9	HEO Orbits	4-7
3.21	Comparison of Ethernet Standards of Optical Network	3-22	4.3.10	Van Allen Radiation Belts	4-8
	<b>Review Questions</b>	<b>3-22</b>	4.4	Types of Satellites	4-8

**Unit – IV**

**Chapter 4 : Overview of Satellite Systems 4-1 to 4-26**

**Syllabus :** Working principle, Concepts and basic components of Satellite system: Earth segment, Space segment, Active and passive satellite, Geostationary and geosynchronous satellites, Frequency allocations for satellite services, Uplink and downlink frequency, Satellite frequency bands, Basic terminologies used in satellite communication : Latitude, Longitude, look angle, Elevation angle, Station keeping, Propagation delay time, Velocity, Look angle and foot print. Communication satellite orbits and its types : LEO, MEO, Elliptical orbit and GEO, Parameters and characteristics of various orbits, Kepler's law, Apogee and Perigee heights, Orbit perturbations, Effects of a non spherical earth, Atmospheric drag, Effect of eclipse on satellite motion.

4.1	Satellite Communication	4-2
4.1.1	Communication using Satellites	4-2
4.1.2	Principle of Satellite Communication	4-2
4.1.3	Block Diagram (Model) of a Satellite Communication System	4-2
4.1.4	Benefits of Satellite Communication	4-3
4.2	Basic Concepts	4-3
4.2.1	The Space Segment	4-3
4.2.2	The Earth Segment	4-4
4.2.3	Active & Passive Satellites	4-4
4.2.4	Passive Satellite	4-4
4.2.5	Active Satellites	4-4
4.2.6	Comparison of Active and Passive Satellites	4-5
4.3	Satellite Orbits	4-5
4.3.1	Types of Satellite Orbits	4-5
4.3.2	Geosynchronous Orbit	4-5
4.3.3	Geostationary Orbit	4-6
4.3.4	Comparison of Geostationary and Geosynchronous Orbits	4-6
4.3.5	Polar Orbits	4-7
4.3.6	Inclined Orbits	4-7
4.3.7	LEO Orbits	4-7
4.3.8	MEO Orbits	4-7
4.3.9	HEO Orbits	4-7
4.3.10	Van Allen Radiation Belts	4-8
4.4	Types of Satellites	4-8
4.4.1	Nonsynchronous Satellites	4-8
4.4.2	Geostationary (GEO) Satellites	4-8
4.4.3	Geosynchronous Satellites	4-9
4.4.4	Near Synchronous Satellites	4-10
4.4.5	Comparison of Non Synchronous and Synchronous Satellites	4-10
4.5	Satellite Frequency Plans and Allocations	4-10
4.5.1	Uplink Frequency	4-10
4.5.2	Downlink Frequency	4-11
4.6	Basic Terminology used in Satellite Communication	4-13
4.6.1	Latitude and Longitude	4-13
4.6.2	Antenna Look Angles	4-14
4.6.3	Station Keeping	4-15
4.6.4	Satellite Antenna Radiation Patterns Footprints	4-15
4.6.5	Path Loss	4-16

4.6.6	Signal Attenuation .....	4-16	5.3.2	Parabolic Dish Antennas .....	5-5
4.6.7	Velocity .....	4-16	5.3.3	LNA .....	5-6
4.6.8	Propagation Delay .....	4-17	5.3.4	Power Subsystem .....	5-7
4.7	LEO, MEO and GEO Satellites .....	4-17	5.3.5	Telemetry Tracking and Command (TTAC) Subsystem .....	5-7
4.7.1	LEO Satellites .....	4-17	5.3.6	Attitude Control .....	5-8
4.7.2	The MEO Satellites .....	4-18	5.3.7	Spinning Satellite Stabilization .....	5-9
4.7.3	Geostationary (GEO) Satellites .....	4-19	5.3.8	Momentum Wheel Stabilization .....	5-9
4.7.4	Comparison of LEO, MEO and GEO Satellites .....	4-19	5.3.9	Station Keeping .....	5-10
4.8	Kepler's Laws .....	4-19	5.3.10	Thermal Control .....	5-11
4.8.1	Kepler's First Law .....	4-20	5.4	Satellite Transponder .....	5-11
4.8.2	Kepler's Second Law .....	4-20	5.4.1	Single Conversion Transponder .....	5-12
4.8.3	Kepler's Third Law .....	4-20	5.4.2	A Double Conversion Transponder .....	5-13
4.8.4	Apogee Height ( $h_a$ ) .....	4-21	5.4.3	Regenerative Transponder .....	5-14
4.8.5	Perigee Height ( $h_p$ ) .....	4-21	5.5	Space Link .....	5-14
4.9	Orbit Perturbations .....	4-22	5.5.1	Uplink Model .....	5-14
4.9.1	Effects of a Nonspherical Earth .....	4-22	5.5.2	Satellite Downlink Model .....	5-15
4.9.2	Atmospheric Drag .....	4-23	5.5.3	Effective Isotropic Radiated Power (EIRP) .....	5-16
4.10	Earth Eclipse of Satellite .....	4-24	5.6	Transmission Losses .....	5-16
4.11	Features of Satellite System .....	4-25	5.6.1	Free Space Transmission Loss (FSL) .....	5-17
4.12	Applications of Satellite Communication .....	4-25	5.6.2	Feeder Losses .....	5-17
	• <b>Review Questions</b> .....	<b>4-25</b>	5.6.3	Antenna Misalignment Losses .....	5-17
			5.6.4	Fixed Atmospheric Losses .....	5-18
			5.6.5	Ionospheric Losses .....	5-18
			5.7	Various Satellite Systems .....	5-19
			5.8	Satellite Applications .....	5-19
			5.8.1	Radio and TV Broadcasting .....	5-19
			5.8.2	Remote Sensing Satellites .....	5-20
			5.8.3	Weather Forecasting .....	5-20
			5.8.4	Scientific Satellites .....	5-20
			5.8.5	Military Satellites .....	5-20
			5.8.6	Navigation .....	5-20
			5.8.7	Applications for Mobile Communication .....	5-20
			5.9	GPS (Global Positioning System) .....	5-21
			5.9.1	GPS Transmitter .....	5-22
			5.9.2	The C/A Code .....	5-22
			5.9.3	GPS Receiver .....	5-23
			5.10	VSAT (Very Small Aperture Terminals) .....	5-23
			5.11	Comparison of Satellite Communication and Fiber Optic Communication .....	5-29
				• <b>Review Questions</b> .....	<b>5-30</b>

**Unit – V**

**Chapter 5 : Satellite Segments and Services 5-1 to 5-30**

**Syllabus :** Satellite earth station : Block diagram, Antenna subsystem, LNA, Power subsystem, Telemetry tracking and command (TTAC) subsystem, Attitude control, Spinning satellite stabilization, Momentum wheel stabilization, Station keeping, Thermal control, Transponder: Single, Double conversion and regenerative type, Space link : Equivalent Isotropic Radiated Power (EIRP), Transmission losses: Free space transmission loss, Feeder losses, Antenna misalignment losses, Fixed atmospheric and ionosphere losses, Satellite Applications: GPS: Global positioning system (GPS) : Concept, Working principle, Transmitter and receiver, VSAT: Overview, Architecture, Working principle, Applications.

5.1	Satellite Communication System .....	5-2
5.2	Satellite Earth Station (or Ground Station) .....	5-2
5.2.1	Receiver Section .....	5-3
5.2.2	Transmitter Subsystem .....	5-3
5.2.3	Direct Broadcast Satellite (DBS) .....	5-4
5.3	Earth Station Subsystems .....	5-4
5.3.1	Antenna Subsystem .....	5-4
