

Module-1

Chapter 1 : Waste Water Generation, Collection and Conveyance 1-1 to 1-82

Syllabus : *Introduction : Domestic waste water, Industrial Wastewater and Storm water, Conservancy and Water carriage system, Systems of sewerage, Quantity and Quality of Wastewater.*

Need for Analysis, Characteristics of wastewater : Analysis of wastewater, Characteristics of wastewater and sampling, Composition, Biochemical characteristics, aerobic decomposition, anaerobic decomposition,

Waste Water Treatment and Flow diagram : Treatment processes : Objective, methods of treatment, flow sheets showing Preliminary, Primary, Secondary and Tertiary treatment. Waste Water Treatment Plant and Effluent Treatment Plants. Various combinations and options. Low-cost treatment plant..

1.1	Composition of Domestic and Industrial Sewage	1-1
1.1.1	Introduction.....	1-1
1.1.2	Composition of Sewage.....	1-1
1.1.3	Characteristics of Sewage.....	1-1
1.1.4	Physical Characteristics.....	1-2
1.1.5	Chemical Characteristics of Sewage.....	1-3
1.1.6	Biological Characteristics of Sewage	1-3
1.2	Process of Decomposition of Sewage.....	1-4
1.2.1	Introduction.....	1-4
1.2.2	Cycle of Nitrogen	1-4
1.2.3	Some Important Terms.....	1-6
1.3	Various Systems of Sanitation	1-6
1.3.1	Introduction.....	1-6
1.3.2	Conservancy System (Dry-System).....	1-7
1.3.3	Water-carriage System	1-8
1.3.4	Differences between the Conservancy System and the Water-carriage System	1-9
1.4	Sewerage Systems.....	1-9
1.4.1	Introduction.....	1-9
1.4.2	Combined System.....	1-9
1.4.3	Separate System.....	1-10

1.4.4	Partially Separate System.....	1-10
1.4.5	Comparison between the Combined and Separate Systems.....	1-11
1.5	Selection of the Proper Sewage System	1-11
1.5.1	Introduction.....	1-11
1.5.2	Factors to be Considered for the Selection of the Sewage System	1-11
1.5.3	Comparison between Domestic Sewage and Storm Water	1-12
1.6	Generation and Estimation of Community Sewage	1-13
1.6.1	Introduction.....	1-13
1.6.2	Sources of the Sanitary Sewage	1-13
1.7	Factors Affecting Sanitary Sewage	1-13
1.7.1	Introduction.....	1-13
1.7.2	Rate of Water Supply	1-14
1.7.3	Growth Rate of Population.....	1-14
1.7.4	Areas to be Served	1-14
1.7.5	Rate of Ground-Water Infiltration	1-14
1.7.6	Determination of Quantity of Sanitary Sewage	1-15
1.7.7	Flow Quantity Estimation of Sewage.....	1-15
1.7.8	Variation in Consumption of Water	1-16
1.7.9	Minimum Flow of Sewage	1-17
1.8	Storm Water Sewage	1-17
1.8.1	Introduction.....	1-17
1.8.2	Factors Affecting Storm-Water (Sewage).....	1-17
1.8.3	Measurement of Storm-Water.....	1-18
1.8.4	Example for Measurement of Storm Water by Rational Formula.....	1-18
1.8.5	Run-off Co-efficient	1-19
1.8.6	Use of Empirical Formulae to Calculate the Runoff Co-efficient	1-20
1.8.7	Intensity of Rainfall	1-21
1.8.8	Differences between Domestic Sewage and Storm Water Runoff	1-21
1.8.9	Time of Concentration for a Storm Water Drain	1-21

1.9	Types of Sewers	1-22	1.15.5	Flushing Tanks	1-41
1.9.1	Introduction.....	1-22	1.15.6	Grease and Oil Traps.....	1-41
1.9.2	Classification of the Sewers on the Basis of the Material.....	1-23	1.15.7	Inlets	1-41
1.9.3	Classification of Sewers on the Basis of Shapes	1-27	1.15.8	Inverted Siphons.....	1-42
1.10	Variation in Sewage Flow	1-30	1.15.9	Lamp Holes.....	1-42
1.10.1	Introduction.....	1-31	1.15.10	Manholes/Inspection Chambers	1-42
1.10.2	Flow Assumptions	1-31	1.15.11	Storm Water Regulator.....	1-43
1.10.3	Velocity of Flow.....	1-31	1.16	Effects of Change in of Life Style on Sewage Quality	1-44
1.11	Estimation of Waste Water Discharge or Sewage Discharge	1-31	1.17	Characteristic of Sewage	1-44
1.11.1	Introduction.....	1-31	1.17.1	Introduction.....	1-44
1.11.2	Estimate of Sanitary Sewage	1-31	1.17.2	Sampling Method of Sewage or Methods of sampling	1-45
1.12	Design of Sewers.....	1-32	1.17.3	Physical Analysis of the Sewage.....	1-45
1.12.1	Introduction.....	1-32	1.18	Chemical Analysis of the Sewage.....	1-47
1.12.2	Formation of Zones	1-32	1.18.1	Introduction.....	1-47
1.12.3	Arrangement of the Sewers	1-32	1.18.2	Chlorine	1-47
1.12.4	Quantity of Sewage.....	1-32	1.18.3	Fats Greases and Oils	1-48
1.12.5	Velocity of Sewage Flow.....	1-32	1.18.4	Nitrogen.....	1-48
1.12.6	Section of the Sewer	1-32	1.18.5	Oxygen.....	1-48
1.12.7	Gradient of the Region	1-32	1.18.6	pH Value	1-50
1.13	Hydraulic Formulae	1-32	1.18.7	Total Solids in the Sewages.....	1-51
1.13.1	Introduction.....	1-32	1.18.8	Biological Tests and Sewage.....	1-51
1.13.2	Factors Affecting the Flow of Sewage.....	1-33	1.18.9	Procedure of B.O.D. Test when the Seeding of Wastewater is Necessary	1-52
1.14	Basic Design Concepts for Sewers Designs.....	1-33	1.18.10	Aerobic and Anaerobic Decomposition	1-53
1.14.1	Manning's formula.....	1-33	1.18.11	Differences between an Aerobic and Anaerobic Decomposition.....	1-53
1.14.2	Hazen and Williams Formula.....	1-33	1.19	Sewage Treatment.....	1-53
1.14.3	Design Procedure of Sewer.....	1-33	1.19.1	Introduction.....	1-53
1.14.4	Self-Cleaning Velocity.....	1-34	1.19.2	Preliminary Treatment	1-54
1.14.5	Hydraulic Elements for the Design of Circular Sewer	1-34	1.19.3	Primary Treatments.....	1-54
1.15	Sewer Appurtenances	1-39	1.19.4	Secondary Treatments.....	1-54
1.15.1	Introduction.....	1-39	1.19.5	Tertiary Treatment.....	1-54
1.15.2	Catch Basin or Catch Pit.....	1-40	1.19.6	Difference between Preliminary Treatment and Primary Treatment.....	1-54
1.15.3	Clean-Outs	1-40	1.19.7	Pollution Due to Improper Disposal of Sewage ...	1-54
1.15.4	Drop Manholes	1-40			

<p>1.20 Introduction to Unit Operation and Processes 1-55</p> <p>1.20.1 Introduction..... 1-55</p> <p>1.20.2 Treatment of Sewage..... 1-55</p> <p>1.21 Physical Unit Operations for Waste Water Treatment..... 1-56</p> <p>1.21.1 Introduction..... 1-56</p> <p>1.21.2 Screening..... 1-56</p> <p>1.21.3 Purpose of Screening..... 1-56</p> <p>1.21.4 Types of Screens 1-56</p> <p>1.21.5 Bar Screen..... 1-57</p> <p>1.21.6 Fine Screen..... 1-57</p> <p>1.21.7 Communiters or Cutting Screens 1-57</p> <p>1.21.8 Other Type of Screens 1-57</p> <p>1.21.9 Theory of Screen Chamber..... 1-58</p> <p>1.21.10 Examples on Design of Screen Chamber 1-58</p> <p>1.22 Grit Chambers..... 1-60</p> <p>1.22.1 Introduction..... 1-60</p> <p>1.22.2 Need to Remove Grit..... 1-60</p> <p>1.22.3 Functions of Grit Chambers / The Purpose of Architecture..... 1-60</p> <p>1.22.4 Location of Grit Chambers..... 1-60</p> <p>1.22.5 Nature of Grit 1-60</p> <p>1.22.6 Sources of Grit 1-61</p> <p>1.22.7 Volume of the Grit..... 1-61</p> <p>1.22.8 Number of Grit Chambers 1-61</p> <p>1.22.9 Type of Grit Chambers..... 1-61</p> <p>1.22.10 Cleaning of the Grit Chambers..... 1-62</p> <p>1.23 Design Aspects of Grit Chamber 1-62</p> <p>1.23.1 Design Criteria..... 1-62</p> <p>1.23.2 Settling Velocities and Overflow Rate for Grit Removal (Temperature 10°C) 1-62</p> <p>1.23.3 Velocity of Flow..... 1-62</p> <p>1.24 Flotation Units..... 1-62</p> <p>1.24.1 Introduction..... 1-62</p> <p>1.24.2 Uniform Flow 1-63</p> <p>1.25 Sedimentation Tanks..... 1-63</p>	<p>1.25.1 Introduction..... 1-63</p> <p>1.25.2 Purpose of Sedimentation 1-63</p> <p>1.25.3 Theory of Sedimentation of Sewage 1-63</p> <p>1.25.4 Classification of Sedimentation Tanks..... 1-64</p> <p>1.26 Design of Primary Treatment Units of Sewage 1-64</p> <p>1.26.1 Design Factors of Screenings 1-64</p> <p>1.26.2 Design of Bar Screens 1-65</p> <p>1.26.3 Design of Grit Chamber..... 1-65</p> <p>1.26.3.1 Design Criteria for Grit Chambers 1-65</p> <p>1.26.4 Design of Sedimentation Tank..... 1-66</p> <p>1.27 Examples on Design of Grit Chamber 1-66</p> <p>1.28 Examples on Design of Sedimentation Tank..... 1-78</p> <p>1.29 Important Formulae 1-81</p>
--	---

Module-2

Chapter 2 : Introduction to Biological Treatment

2-1 to 2-47

Syllabus : *Overview of biological wastewater treatment, objectives of the treatment, role of microorganisms, types of biological processes for wastewater treatment, suspended and attached growth systems.*

2.1	Overview of Biological Wastewater Treatment.....	2-1
2.1.1	Introduction.....	2-1
2.1.2	Importance of Secondary Treatment	2-1
2.2	Biological Treatment Units	2-1
2.2.1	Introduction.....	2-1
2.2.2	Biological Units Used For The Secondary Treatment of Sewage.....	2-2
2.2.3	Principles of Biological Treatment	2-2
2.2.4	Role of Microorganisms In Sewage	2-2
2.2.5	Anaerobic Bacteria	2-3
2.2.6	Types of Algae in the Sewage	2-3
2.3	Activated Sludge Process [A.S.P]	2-4
2.3.1	Introduction.....	2-4
2.3.2	Properties of Activated Sludge.....	2-5
2.3.3	Process of Activated Sludge.....	2-5

2.3.4	Flow Chart of the Activated Sludge Process.....	2-5	2.7.5	Design Aspect of Trickling Filters	2-30
2.3.5	Operational Problems and Maintenance in ASP....	2-6	2.7.6	Advantages of Trickling Filters	2-31
2.4	Aeration Methods.....	2-6	2.7.7	Disadvantages of Trickling Filters	2-31
2.4.1	Introduction.....	2-6	2.7.8	Differences between Single Stage and Two Stage Tricking Filters	2-31
2.4.2	Diffused Air Aeration.....	2-7	2.8	Recirculation and Ventilation	2-32
2.4.3	Mechanical Aeration	2-9	2.8.1	Recirculation in Filters.....	2-32
2.4.4	Combination of Diffused Air Aeration and Mechanical Aeration	2-11	2.8.2	The Ventilation in the Water Treatment Plant.....	2-32
2.4.5	Advantages of Activated Sludge Process	2-12	2.8.3	Operational Problems of Trickling Filters.....	2-32
2.4.6	Disadvantages of Activated Sludge Process	2-12	2.8.4	Control Measures of Filters.....	2-32
2.4.7	Sludge Bulking / Sludge thickness.....	2-12	2.9	Anaerobic Filters	2-43
2.4.8	Factors Assisting the Process of Sludge Bulking	2-12	2.9.1	Introduction.....	2-43
2.4.9	Control Measures For Sludge Bulking.....	2-13	2.9.2	Anaerobic Filters [Theory].....	2-43
2.4.10	Important Terms in Activated Sludge Process (A.S.P).....	2-13	2.9.3	Factors Affecting the Design and Working of Up-flow Anaerobic Filters	2-43
2.4.11	Examples on Activated Sludge Process	2-13	2.10	Anaerobic Lagoons	2-43
2.5	Sequencing Batch-Reactors [SBRs]	2-25	2.10.1	Introduction.....	2-43
2.5.1	Introduction.....	2-25	2.10.2	Purpose of Anaerobic Lagoons.....	2-44
2.5.2	Advantages of SBRs.....	2-25	2.10.3	Working Process of Anaerobic Lagoons.....	2-44
2.5.3	Characteristics of SBRs	2-26	2.11	Up-flow Anaerobic Sludge Blanket Reactor (U.A.S.B.)	2-44
2.5.4	Continuous Flow System.....	2-26	2.11.1	Introduction.....	2-44
2.6	Design Guidelines for Sludge Blanket Reactor [SBR].....	2-27	2.11.2	Fields of use of UASB	2-44
2.6.1	Introduction.....	2-27	2.11.3	UASB Process	2-44
2.6.2	Screening Influent Waste-water	2-27	2.11.4	Features to be Noted of UASB Process.....	2-45
2.6.3	Influent-Flow Equalization	2-27	2.12	Secondary Treatment.....	2-45
2.6.4	Procedure to Determine B.O.D.	2-27	2.13	Treatability Index.....	2-45
2.6.5	Determination of C.O.D.....	2-28	2.13.1	Need to use Treatability Index	2-45
2.7	Trickling Filters.....	2-28	2.13.2	Treatability Index to Judge the Quality of Waste Water	2-45
2.7.1	Principles of Trickling Filters.....	2-29	2.14	Important Formulae.....	2-46
2.7.2	Types of Trickling Filters.....	2-29	2.15	Suspended and Attached Growth System.....	2-47
2.7.3	Material used for Trickling Filters Different T.F. Media.....	2-29	2.15.1	Introduction.....	2-47
2.7.4	Treatment Procedure of Sewage.....	2-30	2.15.2	Suspended Growth Process	2-47
			2.15.3	Attached Growth Process	2-47

Module-3

Chapter 3 : Microbial Growth Kinetics 3-1 to 3-7

Syllabus : *Microbial Growth Kinetics terminology, rate of utilization of soluble substrates, rate of biomass growth with soluble substrate, rate of oxygen uptake, effects of temperature, total volatile suspended solids and active biomass, net biomass yield and observed yield.*

Biotechnological remedies : Bio-fertilizers, Physical, chemical and Microbiological factors of composting, Health risk-Pathogens, Odor management, Microbial cell/enzyme technology, Adapted microorganisms, Biological removal of Nutrients.

3.1	Microbial Growth Kinetic Terminology.....	3-1
3.1.1	Introduction.....	3-1
3.1.2	Microbial Kinetic Growth.....	3-1
3.1.3	Rate of Soluble Substrate Utilization (K).....	3-2
3.1.4	Biomass Growth with Soluble Substrates	3-2
3.1.5	Rate of Oxygen Uptake.....	3-2
3.1.6	Net Biomass Yield and Observed Yield.....	3-2
3.2	Biotechnological Remedies.....	3-2
3.2.1	Introduction.....	3-2
3.2.2	Bio-Fertilizers	3-3
3.3	Composting.....	3-3
3.3.1	Introduction.....	3-3
3.3.2	Process of Composting.....	3-3
3.3.3	Factors Affecting Composting Process	3-4
3.3.4	Methods of Composting.....	3-4
3.3.5	Mechanical Composting	3-5
3.3.6	Vermi Composting.....	3-5
3.4	Health Risk / Hazards in Composting.....	3-6
3.4.1	Introduction.....	3-6
3.4.2	Biological Hazards of Composting	3-6
3.4.3	The Chemical Hazards of Compositing / Odour Generation	3-6
3.4.4	Odour Management.....	3-6
3.4.5	Microbial Cell / Enzyme Technology.....	3-7

Module-4

Chapter 4 : Aerobic Decomposition 4-1 to 4-25

Syllabus : *Aerobic Suspended Growth Biological Treatment Systems : Aerobic biological oxidation, process description, environmental factors, Modifications of ASP: Complete Mix activated sludge, Extended Aeration system, Oxidation Ditch systems, Oxygen activated sludge, Oxidation ponds, Stabilization ponds, Aerobic attached Growth Biological Treatment-Trickling Filter.*

Design of ASP : Trickling Filter, Oxidation Pond, Oxidation Ditch and Aerated lagoons.

4.1	Aerobic Suspended Growth Biological Treatment System.....	4-1
4.1.1	Introduction.....	4-1
4.1.2	Differences between the Suspended Growth and Attached Growth Processes	4-1
4.2	An Aerobic Biological Oxidation	4-1
4.2.1	Introduction.....	4-1
4.2.2	Aerobic Digestion.....	4-1
4.2.3	Advantages of Aerobic Digestion.....	4-2
4.2.4	Limitations of Aerobic Digestion	4-2
4.2.5	Effects of Aerobic Digestion on Environment.....	4-2
4.3	Modification of Activated Sludge Process (A.S.P.) ..	4-2
4.3.1	Introduction.....	4-2
4.3.2	Modification of A.S.P.	4-2
4.4	Oxidation Ponds.....	4-3
4.4.1	Introduction.....	4-3
4.4.2	Types of Ponds	4-4
4.4.3	Oxidation Ditch.....	4-6
4.4.4	Differences between Oxidation Pond and Oxidation Ditch.....	4-7
4.5	Design Criteria of the Ponds	4-7
4.5.1	Typical Design Parameters for Ponds	4-7
4.5.2	Construction Units.....	4-7
4.5.3	General Considerations	4-7

<p>4.5.4 Design Steps of Oxidation Pond4-8</p> <p>4.6 Comparison of Pond.....4-8</p> <p>4.6.1 Introduction.....4-8</p> <p>4.6.2 General Instructions for better Performance of the Oxidation Ponds4-8</p> <p>4.6.3 Advantages of Oxidation Ponds4-9</p> <p>4.6.4 Disadvantages of Oxidation Ponds4-9</p> <p>4.6.5 Photosynthetic Oxygen and Recommended BOD Loading4-9</p> <p>4.6.6 Detention Period (t)4-9</p> <p>4.7 Examples on Design of Oxidation Pond.....4-10</p> <p>4.8 Aerobic Attached Growth4-16</p> <p>4.9 Trickling Filers4-16</p> <p>4.10 Activated Sludge Process [A.S.P]4-17</p> <p>4.10 Introduction.....4-17</p> <p>4.10.2 Properties of Activated Sludge.....4-17</p> <p>4.10.3 Process of Activated Sludge.....4-17</p> <p>4.10.4 Flow Chart of the Activated Sludge Process.....4-17</p> <p>4.10.5 Operational Problems and Maintenance in ASP4-18</p> <p>4.10.6 Advantages of Activated Sludge Process4-19</p> <p>4.10.7 Disadvantages of Activated Sludge Process4-19</p> <p>4.10.8 Examples on Activated Sludge Process4-19</p>	<p>5.1.4 Dewatering of Sludge by Gravity Thickener.....5-2</p> <p>5.1.5 Design Parameters of an Anaerobic Digester5-3</p> <p>5.1.6 Capacity of the Digester.....5-3</p> <p>5.1.7 Examples on Design of Digester.....5-4</p> <p>5.2 Anaerobic Filters5-7</p> <p>5.2.1 Introduction.....5-7</p> <p>5.2.2 Anaerobic Filters [Theory].....5-7</p> <p>5.2.3 Factors Affecting the Design and Working of Up flow Anaerobic Filters5-7</p> <p>5.3 Anaerobic Lagoons5-7</p> <p>5.3.1 Introduction.....5-7</p> <p>5.3.2 Purpose of Anaerobic Lagoons.....5-8</p> <p>5.3.3 Working Process of Anaerobic Lagoons.....5-8</p> <p>5.3.4 Differences between Anaerobic and Aerobic Digestion5-8</p> <p>5.4 Up-flow Anaerobic Sludge Blanket Reactor (U.A.S.B.)5-8</p> <p>5.4.1 Introduction.....5-9</p> <p>5.4.2 Fields of use of UASB5-9</p> <p>5.4.3 UASB Process5-9</p> <p>5.4.4 Features to be Noted of UASB Process.....5-9</p> <p>5.4.5 Disadvantages of UASB Reactor.....5-10</p> <p>5.5 Energy Generation by the Anaerobic Digestion5-10</p> <p>5.5.1 Introduction.....5-10</p> <p>5.5.2 Disadvantages Anaerobic Digestion.....5-10</p> <p>5.5.3 Steps Inside the Anaerobic Digester5-10</p> <p>5.6 The Stuch Reactors5-10</p> <p>5.6.1 Introduction.....5-10</p> <p>5.6.2 Standard and High Rate Digestion.....5-11</p> <p>5.6.3 Advantages of High Rate Anaerobic Digestion5-11</p> <p>5.7 Design of anaerobic treatment units : Anaerobic Lagoons.....5-11</p>
---	---

Module-5

Chapter 5 : Anaerobic Decomposition 5-1 to 5-12

Syllabus : *Anaerobic Decomposition : Mechanism of anaerobic fermentation – a multistep process, Microbiology and Biochemistry of Anaerobic processes, Substrate inhibition, Stuck reactors, Standard rate, High rate and Multistage anoxic digesters. Introduction to UASB.*

Design of anaerobic treatment units : Anaerobic Lagoons

<p>5.1 Anaerobic Digestion.....5-1</p> <p>5.1.1 Introduction.....5-1</p> <p>5.1.2 Biological Process5-1</p> <p>5.1.3 Types of Anaerobic Digesters5-2</p>
--

Module-6

Chapter 6 : Natural and Biotechnological Methods of Removal Contamination 6-1 to 6-6

Syllabus : *Natural Treatment Systems: Development of natural treatment systems, Rapid infiltration systems, Overland Flow systems, constructed wetlands, Floating aquatic plant treatment systems. Introduction to engineering Fundamentals of Biotechnology. Heavy Metal Removal using advance treatment methods – Membrane filtration, Reverse Osmosis and Ion exchange.*

6.1	Natural Treatment System.....6-1	6.1.3	Overland Flow System6-2
6.1.1	Introduction.....6-1	6.1.4	Constructed Wetland System.....6-2
6.1.2	Rapid Infiltration System for Waste Water6-1	6.1.5	Floating Aquatic Plant Treatment System.....6-3
		6.2	Fundamentals of Biotechnology in Wastewater Treatment.....6-3
		6.2.1	Introduction.....6-3
		6.2.2	Heavy Metal Removal Using Advance Treatment Methods6-4
		6.2.3	Ion-exchange Method6-4
		6.2.4	Methods to Remove Iron and Manganese6-5
		6.2.5	Membrane Filtration Method.....6-5
		6.2.6	Reverse Osmosis.....6-6
