Chapter 1 : Introduction to Database Concepts 1-1 to 1-14

Syllabus : Introduction to databases, History of database system, Benefits of Database system over traditional file system, relational databases, Three tier database architecture, Data independence

1.1 Introduction to Database 1-1
1.2 Overview of DBMS 1-2
1.2.1 History of Database System 1-3
1.3 Benefits of Database System over Traditional File System 1-3
1.4 Three Tier Database Architecture 1-5
1.5 Data Independence 1-7
1.5.1 Difference between Logical and Physical Data Independence 1-7
1.6 Database Users 1-8
1.7 Database Administrator (DBA) 1-8
1.7.1 Roles of DBA 1-9
1.7.2 Responsibilities of DBA 1-9
1.7.3 Skills Required for DBA 1-9
1.8 Database System Detailed Architecture / Structure 1-10
1.8.1 Query Processor Components 1-10
1.8.2 Storage Manager / Storage Management 1-11
1.8.3 Transaction Management 1-12
1.9 Relational Databases 1-12

Chapter 2 : Data Models 2-1 to 2-11

Syllabus : The importance of data models, Introduction to various data models (Hierarchical, Network, Relational, Entity relationship and object model), Basic building blocks, Business rules, Degrees of data abstraction

2.1 The Importance of Database Models 2-1
2.1.1 Benefits of Data Modeling 2-1
2.1.2 Basic Building Block of Data Model 2-2
2.2 Introduction to Various Data Models 2-3
2.2.1 Hierarchical Model 2-3
2.2.2 Network Model 2-5
2.2.3 Relational Model 2-6
2.2.4 Entity Relationship Model 2-7
2.2.5 Object Model 2-8
2.3 Comparison of All Data Models 2-9
2.4 Degrees of Data Abstraction 2-10

Chapter 3 : Entity Relationship Data Model 3-1 to 3-34

Syllabus : Database design and ER Model : overview, ER-Model and its Constraints, ER-Diagrams, ERD Issues, weak entity sets

3.1 Entity-Relationship (ER) Model - Overview 3-1
3.1.1 ER Diagrams 3-1
3.1.2 Entity 3-2
3.1.3 Attributes 3-3
3.2 Relationships 3-4
3.3 ER Model Constraints 3-4
3.4 Design Process 3-7
3.5 ER Design Issues 3-8
3.6 Extended Entity-Relationship (ER) Model 3-8
3.6.1 Specialization 3-9
3.6.2 Generalization 3-9
3.6.3 Attribute inheritance 3-10
3.6.4 Constraints and Characteristics of Specialization and Generalization 3-10
3.7 Aggregation 3-12
3.8 Conceptual Design using ER 3-13
3.9 Converting ER & EER Diagram into Tables 3-19
3.9.1 Entity to Tables 3-19
3.9.2 Attributes to Columns of Table 3-19
3.9.3 Relationships to Tables 3-20
3.9.4 Inheritance (Specialisation and Generalisation) to Tables 3-21
3.10 Solved Examples for EER and ER Model 3-23

Chapter 4 : Relational Database Model 4-1 to 4-11

Syllabus : Codd's rules, Relational Schemas, Introduction to UML Relational database model : Logical view of data, keys, integrity rules.

4.1 Relational Database : Logical View of Data 4-1
4.1.1 Relation / Relational Table 4-1
4.1.1(A) Attributes / Fields 4-2
4.1.1(B) Tuple / Records 4-2
4.1.1(C) Domain 4-2
4.2 Codd's Rules 4-2
4.2.1 Overview of Codd's Rule 4-3
4.2.2 Codd's Rule in Details 4-3
4.3 Key Concept 4-6
4.3.1 Types of Keys 4-6
4.4 Relational Integrity Rules 4-7
4.4.1 Types of Relational Integrity 4-7
4.5 Enterprise Constraints 4-8
4.5.1 Unique Constraint 4-9
4.5.2 Primary Key Constraint 4-9
4.6 Introduction to UML 4-9

Chapter 5 : Relational Algebra 5-1 to 5-9

Syllabus : Relational algebra : Introduction, Selection and projection, set operations, renaming, Joins, Division, syntax, semantics, Operators, Grouping and ungrouping

5.1 Relational Algebra 5-1
5.1.1 Basic Relational Algebra Operations 5-1
5.2 Selection Operation (σ) 5-1
5.3 Projection Operation (π) 5-2
5.4 Rename Operation (ρ) 5-2
5.5 SET Operation 5-3
5.5.1 Union Operator 5-3
5.5.2 Intersect Operator 5-4
5.5.3 Difference Operator 5-4
5.6 Cross Product Operation 5-5
5.7 Join Operation (⋈) 5-5
5.8 Relational Division Operator 5-7
5.9 Operator Precedence 5-8
5.10 Examples of Queries in Relational Algebraic using Symbols 5-8

Chapter 6 : Relational Calculus 6-1 to 6-7

Syllabus : Relational comparison, Calculus : Tuple relational calculus, Domain relational Calculus, calculus vs algebra, computational capabilities.

6.1 Introduction 6-1
6.2 Tuple Relational Calculus 6-1
6.2.1 Selection and Projection Operators (Relational Comparisons) 6-2
6.2.2 SET Operations 6-2
6.2.3 CROSS Product Operations (Product Operator) 6-4
6.2.4 JOIN Operations 6-4
6.2.5 Division Operator 6-5
6.3 Domain Relational Calculus 6-6
6.3.1 Example Queries 6-6
6.4 Calculus vs Algebra (Relational Algebra vs Relational Calculus) 6-7
6.5 Computational Capability 6-7

Chapter 7 : Relational Database Design 7-1 to 7-22

Syllabus : Relational Database design : features of good relational database design, atomic domain. Normalization methods : 1NF, 2NF, 3NF, BCNF, 4NF, 5NF

7.1 Functional Dependencies 7-1
7.1.1 Solved Examples on Functional Dependencies 7-2
7.1.2 Types of Functional Dependencies 7-3
7.2 FD Properties (Armstrong's Axioms/ Closures of FD) 7-5
7.3 Decomposition Using FD 7-6
7.3.1 Goals 7-7
7.3.2 Algorithm of Decomposition 7-8
7.3.2(A) Lossless-join Decomposition 7-8
7.3.2(B) Dependency Preservation 7-8
7.3.2(C) Repetition of Information 7-9

7.4 Normalization 7-10
7.4.1 Features of Good Relational Database Design..... 7-10
7.4.1(A) Purpose of Normalisation to Remove Pitfalls in Database Design..... 7-10
7.5 Keys and Attributes in Keys..... 7-12
7.6 First Normal Form (1NF) 7-14
7.7 Second Normal Form (2NF) 7-14
7.8 Third Normal Form (3NF) 7-17
7.9 Boyce Codd Normal Form (BCNF)..... 7-18
7.10 Fourth Normal Form (4NF) 7-19
7.11 Fifth Normal Form (5NF) and Join Dependency..... 7-20

Chapter 8 : Constraints 8-1 to 8-3

Syllabus : What is constraints, types of constrains, Integrity constraints

8.1 Relational Integrity Constraints 8-1
8.1.1 Types of Relational Integrity 8-1
8.2 Enterprise Constraints.....8-2
8.2.1 Unique Constraint.....8-3
8.2.2 Primary Key Constraint.....8-3

Chapter 9 : SQL 9-1 to 9-24

Syllabus : Data definition, Aggregate function, Null Values, Nested sub queries

9.1 Overview of SQL 9-1
9.1.1 Role of SQL.....9-1
9.2 Data Definition Language (DDL).....9-1
9.2.1 CREATE Statement 9-1
9.2.1(A) Create Table with Integrity Constraints.....9-2
9.2.2 Alter Table 9-4
9.2.3 Renaming Table 9-4
9.2.4 Truncating Table 9-5
9.2.5 Dropping Tables.....9-5
9.3 Viewing The Structure of a Table 9-5
9.4 Data Manipulation Language (DML).....9-5
9.5 SELECT Statement.....9-7
9.5.1 SELECT Clause - To Select all Columns.....9-7
9.5.2 SELECT Clause - To Select Specific Columns.....9-7
9.5.3 SELECT Clause - To Select Unique Records.....9-8
9.6 Ordering Query Results - ORDER BY Clause..... 9-8
9.7 Filtering Query Results using WHERE Operator 9-9
9.7.1 Row Selection - WHERE Clause..... 9-9
9.7.2 Arithmetic Operators 9-10
9.7.3 Comparison Operators 9-10
9.7.4 Logical Operators (AND, OR, NOT).....9-11
9.7.5 Range Searching Operators (BETWEEN) 9-11
9.7.6 Pattern Matching Operation – LIKE Operator.....9-11
9.7.7 Limit Clause - Restricting Rows in Result 9-13
9.8 Solved Problem 9-14
9.9 Aggregate Functions.....9-14
9.9.1 Types of Aggregate Functions.....9-14
9.9.2 Summary of Aggregate Functions 9-16
9.10 Concept of Sub Queries.....9-16
9.10.1 Independent Subquery.....9-16
9.10.2 Multiple Row Subquery.....9-17
9.11 Set Membership 9-18
9.11.1 Subquery with IN 9-18
9.11.2 Subquery with ANY.....9-18
9.11.3 Subquery with ALL.....9-19
9.11.4 Subquery with EXISTS Clause 9-19
9.11.5 Subquery with NOT EXISTS Clause 9-20
9.12 Correlated Sub Queries 9-20
9.13 Solved Examples 9-22

Chapter 10 : Advanced SQL 10-1 to 10-18

Syllabus : Joined relations, SQL Tools : MySQL, ORACLE 10G, POSTGRESQL

10.1 Inbuilt Functions in MySQL.....10-1
10.2 String Functions.....10-2
10.2.1 Case Manipulation Functions 10-2
10.2.2 Character Manipulation Functions 10-2
10.3 Arithmetic Functions 10-3
10.4 Date Time Functions 10-4

10.4.1 Conversion functions 10-5
10.4.2 Special Date Formats 10-5
10.5 MySQL SET Operations 10-5
10.5.1 UNION 10-6
10.5.2 Intersect 10-6
10.5.3 Except 10-6
10.5.4 Nesting SET Operations 10-7
10.6 GROUP BY Clause - Grouping Query Results 10-7
10.7 HAVING Clause – Filtering grouped Query Results 10-8
10.7.1 Apply Conditions with GROUP BY 10-8
10.8 GROUP BY and Aggregate Function 10-9
10.9 SQL Joining Tables 10-9
10.9.1 Cartesian Product / Cross Join 10-9
10.9.2 Inner Join 10-10
10.9.3 Outer Join 10-12
10.9.3(A) Left Outer Join 10-12
10.9.3(B) Right Outer Join 10-13
10.9.3(C) Full Outer Join 10-13
10.10 Solved Examples 10-14
10.11 Oracle 10G 10-16
10.12 PostgreSQL 10-17

Chapter 11 : Views 11-1 to 11-4

Syllabus : Introduction to views, data independence, security, updates on views, comparison between tables and views.

11.1 Introduction to Database Objects (Tables and Views) 11-1
11.2 Introduction to Views 11-1
11.2.1 Creating a Views 11-2
11.2.2 Dropping Views 11-3
11.2.3 Modifying a Views 11-3
11.2.4 Renaming Views 11-4
11.2.5 Updating Views 11-4
11.3 Advantages of Views (Comparison of Views and Tables) 11-4
11.4 Disadvantages of Views 11-5

Chapter 12 : Triggers 12-1 to 12-4

Syllabus : Triggers

12.1 Trigger 12-1
12.1.1 Components of Trigger (E-C-A Model) - How to Apply Trigger? 12-1
12.1.2 Trigger Syntax 12-1
12.1.3 Trigger Types 12-2
12.1.4 Trigger Example 12-2
12.1.5 Trigger Operations 12-3
12.1.6 Trigger Advantages \ Uses of Trigger 12-4
12.1.7 Trigger Disadvantages 12-4
12.1.8 Solution for Mutating Table Error 12-4

Chapter 13 : Transaction 13-1 to 13-13

Syllabus : Transaction management : ACID properties, serializability

13.1 Transaction 13-1
13.1.1 Concept of Transaction 13-1
13.1.2 Transaction Management Architecture 13-2
13.1.3 Working of Transaction Processing - Transaction State Diagram 13-3
13.1.3(A) Transaction States 13-4
13.1.4 Fundamental Properties of Transaction / ACID Properties 13-4
13.1.5 Transactions Schedules (Concept of Schedules) 13-6
13.2 Serial Schedule 13-6
13.2.1 Concurrent Schedule 13-7
13.3 Serializability/Serializable Schedule 13-9
13.3.1 Conflict Serializability 13-9
13.3.2 View Serializability 13-10
13.4 Precedence Graph 13-11
13.4.1 Solved Problems 13-12

Chapter 14 : Concurrency Control 14-1 to 14-14

Syllabus : Concurrency control, Lock based concurrency control (2PL, Deadlocks), Time stamping methods, optimistic methods

14.1 Need of Concurrency Control 14-1
14.2 Concurrency Control Schemes 14-3
14.3 Lock Based Concurrency Control 14-3
14.3.1 Working of Locking Protocol / Locking Scheduler / Locking Manager 14-4
14.3.2 Granting Locks 14-6
14.3.3 Rejecting Locks 14-6
14.4 Two-Phase Locking (2PL) Protocol 14-6
14.4.1 Modified Versions of Two-phase Locking Protocol 14-7
14.5 Deadlock 14-7
14.5.1 Approaches for Deadlock Prevention 14-8
14.5.2 Deadlock Detection and Recovery 14-9
14.6 Time Stamping Methods 14-11
14.7 Thomas' Write Rule 14-12
14.8 Optimistic Methods 14-13

Chapter 15 : Databases Recovery Management 15-1 to 15-10

Syllabus : Database recovery management

15.1 Database Recovery Concepts 15-1
15.2 Log-Based Recovery 15-1
15.2.1 Types of Transaction Log 15-2
15.2.2 Working of Log Based Protocol 15-2
15.2.3 Deferred-Modification Technique (REDO Algorithm) 15-2
15.2.4 Immediate-Modification Technique (UNDO Algorithm) 15-5
15.3 Recovery Related Structures – Checkpoint 15-7
15.3.1 Problems in This Approach 15-7
15.3.2 Need of Checkpoints 15-7
15.3.3 Working 15-8
15.3.4 Advantages 15-8
15.3.5 Disadvantages 15-8
15.4 Shadow Paging 15-9
15.4.1 Overview 15-9
15.4.2 Method 15-9
15.4.3 Process of Recovery 15-9
15.4.4 Advantages 15-9
15.4.5 Disadvantages 15-10
15.5 Query Optimization in SQL 15-10

Chapter 16 : Databases Recovery Management 16-1 to 16-7

Syllabus : Database recovery management

16.1 Database Security Issues 16-1
16.1.1 Threats to Databases 16-1
16.1.2 Security Levels 16-1
16.1.3 Security Mechanism 16-1
16.2 Access Control 16-2
16.3 Discretionary Access Control 16-3
16.3.1 Creating a User 16-3
16.3.2 Altering the User 16-4
16.3.3 Dropping a User 16-4
16.4 Database Privileges 16-4
16.4.1 System privileges 16-4
16.4.2 Object privileges 16-4
16.4.3 Ownership Privileges 16-5
16.4.4 Granting Privileges 16-5
16.4.5 Some other types of privileges 16-6
16.4.6 Revoking of Privileges 16-6
16.5 Viewing Privileges 16-7

❑❑❑
