

**INDEX****UNIT I****Chapter 1 : Fundamental of Steel Structures****1-1 to 1-21****Syllabus :**

Steel as construction material.

Steel structures : Towers, Roof trusses, Water Tanks, Bridges, Gantry and Crane girders, Columns, Chimney, building frames etc.

Types, grades and strength of steel sections, Steel Table, IS 808-1989. Stress Strain graph for mild steel.

Loads acting on steel structures according to IS 875-1987 part I to IV.

Limit State Method of design : Meaning and types of limit states, loads, design criteria, limit states of strength, limit states of serviceability.

Factors of safety and load factors as per IS 800:2007.

1.1	Introduction	1-1
1.1.1	Advantages of Steel as Construction Material	1-1
1.1.2	Disadvantages of Steel as a Construction Material	1-2
1.2	Overview of Common Steel Structures.....	1-2
1.2.1	Steel Structures Can be Classified as	1-2
1.2.2	Steel Tower.....	1-2
1.2.3	Roof Trusses.....	1-3
1.2.4	Steel Water Tanks	1-3
1.2.5	Steel Bridges.....	1-3
1.2.6	Gantry and Crane Girders	1-4
1.2.7	Steel Columns or stanchion	1-4
1.2.8	Steel Chimney.....	1-4
1.2.9	Building Frames	1-5
1.3	Types of Sections used in Structural Design	1-6
1.3.2	Grades of Steel and Strength Characteristic	1-8
1.3.3	Use of Steel Table : IS 808, 1989.....	1-12
1.3.4	Typical Stress Strain Graph for Mild Steel and Salient Points in it.....	1-12
1.4	Types of Load coming on Steel Structures According to IS 875-1987 Part I to IV	1-13
1.4.1	Dead Load (IS 875 : 1987 part I)	1-13
1.4.2	Live Loads (IS 875 : 1987 part II)	1-14
1.4.3	Wind Loads (IS 875 : 1987 part III).....	1-14
1.4.4	Snow Loads	1-14
1.4.5	Loads due to Seismic Forces IS 1893 : 2002 and IS 875 Part V.....	1-14

1.5	Design of Structure	1-16
1.5.1	Objective of design of structure	1-16
1.5.2	Factors to considered in designing of steel structures.....	1-16
1.5.3	Method of Design	1-16
1.6	Working Stress Method (WSM).....	1-16
1.7	Limit State Design Method	1-16
1.7.1	Meaning and Definition.....	1-17
1.7.2	Types of Limit State Method.....	1-17
1.7.3	Limit State of Strength.....	1-17
1.7.4	Limit State of Serviceability	1-17
1.7.5	Loads	1-18
1.7.6	Partial Safety Factors.....	1-18
1.7.7	Partial Safety Factor for Load.....	1-18
1.7.8	Partial Safety Factors for Material Strength	1-19
1.8	IS Code List	1-19
1.9	MSBTE Questions and Answers	1-20

UNIT II**Chapter 2 : Design of Steel Connections 2-1 to 2-47****Syllabus :**

Type, use of bolts and joints : Black bolts and High strength bolts, modes of failure.

Specifications of bolt holes for bolted connections.

Strength of bolt in shear, tension, bearing and efficiency of joint.

Analysis and design of bolted joints for axially loaded plate, single and double angle members.

Welded connections : Butt and Fillet welds, size of weld, throat thickness.

Analysis and design of fillet welded joint for plate, single and double angle members subjected to axial load.

2.1	Introduction	2-1
2.1.1	Function of the Connection	2-1
2.1.2	Classification of Connections	2-1
2.1.3	Welded/Bolted Connection for Various Members Connection.....	2-2
2.2	Bolted Connection.....	2-2
2.2.1	Introduction	2-2

2.3	Black Bolts (IS 1363 , 2002).....	2-2	2.12	Welded Connection.....	2-29
2.3.1	Advantages of Black Bolted Connections Over Welded and Rivitted Connections.....	2-3	2.12.1	Introduction	2-29
2.3.2	Disadvantages of Black Bolted Connections	2-3	2.12.2	Advantages of Welded Connection	2-29
2.3.3	Important details for black bolt with example and commonly used bolt of grade 4.6	2-3	2.12.3	Disadvantages of Welded Connections.....	2-29
2.4	High Strength Bolts	2-3	2.13	Types of Welded Connections	2-29
2.4.1	High Strength Friction Grip (HSFG) (IS 3747)	2-4	2.13.1	Butt Weld	2-29
2.4.2	Advantages of HSFG Bolts Over Bearings Types Bolts	2-4	2.13.2	Fillet Weld	2-31
2.4.3	Disadvantages of HSFG Bolts over Black or Bearing Types of Bolts	2-4	2.14	Some Important IS Specifications as per (IS 816) for Design and Analysis of Fillet Welded Connection are as Follows	2-31
2.4.4	Important Details for HSFG	2-4	2.14.1	Size of Fillet Weld (S).....	2-31
2.5	Types of Joints and Failure Modes.....	2-4	2.14.2	Minimum Size of Weld	2-31
2.5.1	Types of Joints.....	2-4	2.14.3	Maximum Size of Fillet Weld is take as Least of	2-32
2.5.2	Types of Bolted Connection	2-4	2.14.4	Effective throat Thickness (t_t)	2-32
2.5.3	Assumptions in Design of Bolted Connections	2-4	2.14.5	Effective Length of Weld (L)	2-32
2.5.4	Types of Actions on the Fasteners.....	2-5	2.14.6	Intermitted Length	2-32
2.6	Terminology	2-5	2.14.7	Overlap Length in the Lap Joint.....	2-32
2.6.1	Pitch of the Bolts (P)	2-5	2.14.8	Side Fillet	2-32
2.6.2	Gauge Distance (g)	2-5	2.14.9	End Return.....	2-33
2.6.3	Edge Distance (e)	2-6	2.15	Design Strength of Plate (P).....	2-33
2.6.4	Tacking Bolts / Tacking Fasteners	2-6	2.16	Design Strength of Fillet Weld (P_{dw})	2-33
2.6.5	Permissible Values of Strength for Bolts	2-7	2.17	Steps for Analysis and Design of Fillet Weld.....	2-34
2.6.6	Different Partial Factors to be used and their Values.....	2-7	2.18	Examples on Welded Connection	2-35
2.6.7	Area of Cross – Section for Bolt	2-7	2.19	MSBTE Questions and Answers	2-45
2.6.8	Nominal Size of Bolt (d) and Diameter of Bolt Hole (do)	2-7	UNIT III		
2.7	Failure Modes of Bolted Connection/joint	2-7	Chapter 3 : Introduction to Limit State Method		
2.7.1	Failure of Bolt.....	2-8	3-1 to 3-6		
2.7.2	Failure of Plate.....	2-10	Syllabus :		
2.8	Design Tensile Strength of Plate	2-11	RCC : Functions of reinforcement, material properties, types of limit states, partial safety factors for material strength, characteristic strengths, characteristic load, design load as per IS 456 : 2000.		
2.9	Efficiency of Joint.....	2-12	Types of loads and combinations as per IS 875 : 2002.		
2.10	Bolt Value.....	2-12	3.1	Introduction	3-1
2.11	Steps for Designing.....	2-19	3.1.1	Definition of Reinforced Cement Concrete	3-1

3.1.2	Functions and Reinforcement.....	3-1
3.1.3	Grades of Concrete and Steel	3-1
3.2	Limit State	3-2
3.2.1	Types of Limit State	3-2
3.2.1.1	Limit State of Collapse	3-2
3.2.1.2	Limit State of Serviceability.....	3-2
3.3	Partial Safety Factors for Material Strength.....	3-3
3.4	Characteristic Strength and Design Strength.....	3-3
3.4.1	Characteristic Strength and Design Strength.....	3-3
3.5	Loading on Structures as Per IS 875.....	3-3
3.6	Characteristic Load and Design Load.....	3-5
3.7	MSBTE Questions and Answers	3-5

Chapter 4 : Analysis and Design of Singly Reinforced Rectangular Sections 4-1 to 4-33

Syllabus :

Limit State of collapse (flexure) : assumptions, steel, strain diagram and stress-strain relationship for concrete and block diagram for singly reinforced section, design parameters and constants, ultimate moment of resistance.

Under- reinforced, over-reinforced and balanced sections.

IS specifications regarding spacing, cover, minimum reinforcement, effective span in beams.

Analysis and design : determination of design constants, ultimate moment of resistance, ultimate load carrying capacity, design of rectangular sections.

4.1	Limit State of Collapse-Flexure	4-1
4.1.1	Assumptions in Design for the Limit State of Collapse in Flexure	4-1
4.1.2	Stress Strain Relationship for Concrete and Steel.....	4-1
4.1.3	Strain Diagram and Stress Block Diagram for Singly Reinforced Section	4-3
4.1.3.1	Total Compressive force (Cu).....	4-3
4.1.3.2	Limiting Moment of Resistance	4-4
4.2	Concept of Under Reinforced, Over Reinforced and Balanced Section	4-4
4.3	Types of Problems	4-5
4.4	Is Specifications Regarding Spacing Cover, Minimum Reinforcement Effective Span etc. in Beams	4-29

4.5	MSBTE Question and Answers	4-31
-----	----------------------------------	------

UNIT IV

Chapter 5 : Design of Shear Reinforcement and Bond 5-1 to 5-19

Syllabus :

Shear : Meaning of shear in beams and slabs. IS code specifications. Various forms of shear reinforcement. Use of bent up bars. Zones of minimum shear reinforcement. Numerical problems on design of shear reinforcement in beam.

Bond : Meaning of bond as per IS code provisions. Meaning and calculation of development length in tension and compression.

5.1	Introduction	5-1
5.2	Nominal Shear Stress (τ_v)	5-1
5.3	Design of Shear Strength of Concrete (Clause 40.2 of IS 456-2000)	5-1
5.3.1	Maximum Shear Stress (Clause 40.2.3 of IS 456-2000, page 72).....	5-2
5.3.2	Minimum Shear Reinforcement (Clause 26.5.1.6 of IS 456-2000, page 48).....	5-2
5.3.3	Maximum Spacing of Stirrups (Clause 26.5.1.5 of IS 456-2000).....	5-3
5.3.4	Forms of Shear Reinforcement	5-3
5.3.5	Design of Shear Reinforcement	5-3
5.4	Bond	5-4
5.5	Type of Bond.....	5-4
5.6	Bond Stress (τ_{bd}).....	5-4
5.6.1	Design Bond Stress for Plain Bars in Tension.....	5-4
5.6.2	Development Length L_d	5-4
5.6.3	Calculation of Development Length.....	5-4
5.6.4	Anchoring Reinforcing Bars.....	5-5
5.6.5	Lapping of Bars	5-5
5.6.6	Contribution of Bent Up Bar is Restricted to 50% in Shear Resistance	5-5
5.7	Examples	5-5
5.8	MSBTE Questions and Answers	5-17

**UNIT V****Chapter 6 : Design of Slabs****6-1 to 6-63****Syllabus :**

Slabs, support conditions, I.S. specifications regarding main steel, distribution steel, spacing and cover for reinforcement, effective span, minimum reinforcement.

Limit state of serviceability for slabs for deflection criteria only.

Design of one way and cantilever slab including development length check only.

Design of two – way slab with four edges discontinuous and provision of torsion reinforcement at corners (As per IS 456 : 2000, table no 26 case no 9 only.) Check for deflection only.

6.1	Introduction	6-1
6.2	One Way Slab.....	6-1
6.3	Two Way Slab.....	6-1
6.3.1	Support Condition.....	6-1
6.4	IS Specification Regarding Spacing and Cover for Reinforcement.....	6-1
6.5	Distribution Steel	6-1
6.6	Design of Simply Supported One Way Slab	6-2
6.7	Examples	6-3
6.8	Design of Cantilever Slab	6-25
6.9	Examples	6-25
6.10	Design of Two Way Slab	6-39
6.11	Examples	6-40
6.12	Design of Dog-legged Staircase	6-53
6.13	Examples	6-54
6.14	MSBTE Questions and Answers	6-61

UNIT VI**Chapter 7 : Design of Axially Loaded Short Columns and Footing****7-1 to 7-44****Syllabus :**

Limit state of collapse in compression, assumptions, effective length, slenderness ratio, short and long columns, and minimum eccentricity.

IS specifications for reinforcement in column.

Load analysis for a column : load on an axially loaded column from beams at a different floor levels in building.

Design of axially loaded short square and rectangular column.

Various RC footings : Isolated and sloped footings, combined footings, piles.

IS specification for reinforcement in footing.

Design of isolated square sloped footing: Flexural design with checks for one-way, two way shear and bond. (Problems on design of footing for bending moment only in theory examination paper.)

7.1	Assumptions in Limit State of Collapse - Compression Clause 38.1 and 39.1 of IS 456 : 2000 page No. 69 and 70.....	7-1
7.2	Column	7-1
7.3	Types of Column	7-1
7.3.1	Short Column	7-2
7.3.2	Long Column / Slender Column	7-2
7.3.3	Effective Length of Column	7-2
7.3.4	Minimum Eccentricity	7-3
7.4	Calculation of Ultimate Load Carrying Capacity of Axially Loaded Short Rectangular and Circular Column	7-3
7.5	Specification for Reinforcement in Column.....	7-4
7.5.1	Main Steel / Longitudinal Reinforcement	7-4
7.5.2	Transverse Reinforcement or Lateral Ties.....	7-4
7.6	Analysis and Design of Axially Loaded Columns	7-4
7.6.1	Examples	7-5
7.7	Footing / Foundation	7-22
7.8	Types of Footing	7-22
7.8.1	Isolated Footing.....	7-23
7.8.2	Combined Footing.....	7-23
7.8.3	Strap Footing / Cantilever Footing.....	7-23
7.8.4	Mat Foundation	7-23
7.9	Design Steps.....	7-23
7.10	MSBTE Questions and Answers	7-42
