# **INDEX**

# **UNIT I**

#### Chapter 1: Fundamental of Steel Structures

1-1 to 1-21

Syllabus:	Syl	labus	1
-----------	-----	-------	---

Steel as construction material.

Steel structures: Towers, Roof trusses, Water Tanks, Bridges, Gantry and Crane girders, Columns, Chimney, building frames

Types, grades and strength of steel sections, Steel Table, IS 808-1989. Stress Strain graph for mild steel.

Loads acting on steel structures according to IS 875-1987 part I to IV

Limit State Method of design: Meaning and types of limit states, loads, design criteria, limit states of strength, limit states of serviceability.

Factors of safety and load factors as per IS 800:2007.

1.1	Introduction1-1
1.1.1	Advantages of Steel as Construction Material1-1
1.1.2	Disadvantages of Steel as a Construction Material1-2
1.2	Overview of Common Steel Structures1-2
1.2.1	Steel Structures Can be Classified as1-2
1.2.2	Steel Tower1-2
1.2.3	Roof Trusses1-3
1.2.4	Steel Water Tanks1-3
1.2.5	Steel Bridges1-3
1.2.6	Gantry and Crane Girders1-4
1.2.7	Steel Columns or stanchion1-4
1.2.8	Steel Chimney1-4
1.2.9	Building Frames1-5
1.3	Types of Sections used in Structural Design1-6
1.3.2	Grades of Steel and Strength Characteristic1-8
1.3.3	Use of Steel Table : IS 808, 19891-12
1.3.4	Typical Stress Strain Graph for Mild Steel
	and Salient Points in it1-12
1.4	Types of Load coming on Steel Structures
	According to IS 875-1987 Part I to IV1-13
1.4.1	Dead Load (IS 875 : 1987 part I)1-13
1.4.2	Live Loads (IS 875 : 1987 part II)1-14
1.4.3	Wind Loads (IS 875 : 1987 part III)1-14
1.4.4	Snow Loads1-14
1.4.5	Loads due to Seismic Forces IS 1893 : 2002
	and IS 875 Part V1-14

	LINIT TT	
1.9	MSBTE Questions and Answers	1-20
1.8	IS Code List	1-19
1.7.8	Partial Safety Factors for Material Strength	1-19
1.7.7	Partial Safety Factor for Load	1-18
1.7.6	Partial Safety Factors	1-18
1.7.5	Loads	1-18
1.7.4	Limit State of Serviceability	1-17
1.7.3	Limit State of Strength	1-17
1.7.2	Types of Limit State Method	1-17
1.7.1	Meaning and Definition	1-17
1.7	Limit State Design Method	1-16
1.6	Working Stress Method (WSM)	1-16
1.5.3	Method of Design	1-16
	steel structures	1-16
1.5.2	Factors to considered in designing of	
1.5.1	Objective of design of structure	1-16
1.5	Design of Structure	1-16

# UNIT II

# Chapter 2 : Design of Steel Connections

2-1 to 2-47

## Syllabus :

Type, use of bolts and joints: Black bolts and High strength bolts, modes of failure.

Specifications of bolt holes for bolted connections.

Strength of bolt in shear, tension, bearing and efficiency of joint.

Analysis and design of bolted joints for axially loaded plate, single and double angle members.

Welded connections: Butt and Fillet welds, size of weld, throat thickness.

Analysis and design of fillet welded joint for plate, single and double angle members subjected to axial load.

2.1	Introduction	2-1
2.1.1	Function of the Connection	2-1
2.1.2	Classification of Connections	2-1
2.1.3	Welded/Bolted Connection for Various Members	
	Connection	2-2
2.2	Bolted Connection	2-2
2.2.1	Introduction	2-2

2.3	Black Bolts (IS 1363 , 2002)2-2
2.3.1	Advantages of Black Bolted Connections  Over Welded and Rivitted Connections2-3
2.3.2	Disadvantages of Black Bolted Connections2-3
2.3.3	Important details for black bolt with example and commonly used bolt of grade 4.62-3
2.4	High Strength Bolts2-3
2.4.1	High Strength Friction Grip (HSFG) (IS 3747)2-4
2.4.2	Advantages of HSFG Bolts Over Bearings Types Bolts2-4
2.4.3	Disadvantages of HSFG Bolts over Black or Bearing Types of Bolts2-4
2.4.4	Important Details for HSFG2-4
2.5	Types of Joints and Failure Modes2-4
2.5.1	Types of Joints2-4
2.5.2	Types of Bolted Connection2-4
2.5.3	Assumptions in Design of Bolted Connections2-4
2.5.4	Types of Actions on the Fasterners2-5
2.6	Terminology2-5
2.6.1	Pitch of the Bolts (P)2-5
2.6.2	Gauge Distance (g)2-5
2.6.3	Edge Distance (e)2-6
2.6.4	Tacking Bolts / Tacking Fasteners2-6
2.6.5	Permissible Values of Strength for Bolts2-7
2.6.6	Different Partial Factors to be used and their Values2-7
2.6.7	Area of Cross – Section for Bolt2-7
2.6.8	Nominal Size of Bolt (d) and Diameter of Bolt Hole (do)
2.7	Failure Modes of Bolted Connection/joint2-7
2.7.1	Failure of Bolt2-8
2.7.2	Failure of Plate2-10
2.8	Design Tensile Strength of Plate2-11
2.9	Efficiency of Joint2-12
2.10	Bolt Value2-12
2.11	Steps for Designing2-19

2.12	Welded Connection	2-29
2.12.1	Introduction	2-29
2.12.2	Advantages of Welded Connection	2-29
2.12.3	Disadvantages of Welded Connections	2-29
2.13	Types of Welded Connections	2-29
2.13.1	Butt Weld	2-29
2.13.2	Fillet Weld	2-31
2.14	Some Important IS Specifications as per (IS 816) for Design and Analysis of Fillet Welded Connection are as Follows	2-31
2.14.1	Size of Fillet Weld (S)	2-31
2.14.2	Minimum Size of Weld	2-31
2.14.3	Maximum Size of Fillet Weld is take as Least of	2-32
2.14.4	Effective throat Thickness (t <sub>t</sub> )	2-32
2.14.5	Effective Length of Weld (L)	2-32
2.14.6	Intermitted Length	2-32
2.14.7	Overlap Length in the Lap Joint	2-32
2.14.8	Side Fillet	2-32
2.14.9	End Return	2-33
2.15	Design Strength of Plate (P)	2-33
2.16	Design Strength of Fillet Weld (P <sub>dw)</sub>	2-33
2.17	Steps for Analysis and Design of Fillet Weld	2-34
2.18	Examples on Welded Connection	2-35
2.19	MSBTE Questions and Answers	2-45
	UNIT III	

# **Chapter 3: Introduction to Limit State Method**

3-1 to 3-6

### Syllabus:

RCC: Functions of reinforcement, material properties, types of limit states, partial safety factors for material strength, characteristic strengths, characteristic load, design load as per IS 456: 2000.

Types of loads and combinations as per IS 875 : 2002.

3.1	Introduction	3-1
3.1.1	Definition of Reinforced Cement Concrete	3-1

3.1.2	Functions and Reinforcement	.3-1
3.1.3	Grades of Concrete and Steel	.3-1
3.2	Limit State	.3-2
3.2.1	Types of Limit State	.3-2
3.2.1.1	Limit State of Collapse	.3-2
3.2.1.2	Limit State of Serviceability	.3-2
3.3	Partial Safety Factors for Material Strength	.3-3
3.4	Characteristic Strength and Design Strength	.3-3
3.4.1	Characteristic Strength and Design Strength	.3-3
3.5	Loading on Structures as Per IS 875	.3-3
3.6	Characteristic Load and Design Load	.3-5
3.7	MSBTE Questions and Answers	.3-5

# Chapter 4: Analysis and Design of Singly Reinforced Rectangular Sections 4-1 to 4-33

### Syllabus:

Limit State of collapse (flexure): assumptions, steel, strain diagram and stress-strain relationship for concrete and block diagram for singly reinforced section, design parameters and constants, ultimate moment of resistance.

Under- reinforced, over-reinforced and balanced sections.

IS specifications regarding spacing, cover, minimum reinforcement, effective span in beams.

Analysis and design : determination of design constants, ultimate moment of resistance, ultimate load carrying capacity, design of rectangular sections.

4.1	Limit State of Collapse-Flexure4-1
4.1.1	Assumptions in Design for the Limit  State of Collapse in Flexure4-1
4.1.2	Stress Strain Relationship for Concrete and Steel4-1
4.1.3	Strain Diagram and Stress Block Diagram for Singly Reinforced Section4-3
4.1.3.1	Total Compressive force (Cu)4-3
4.1.3.2	Limiting Moment of Resistance4-4
4.2	Concept of Under Reinforced, Over Reinforced and Balanced Section4-4
4.3	Types of Problems4-5
4.4	Is Specifications Regarding Spacing Cover, Minimum Reinforcement Effective Span etc. in Beams4-29

4.5 MSBTE Question and Answers ......4-31

UNIT IV

# Chapter 5: Design of Shear Reinforcement and Bond 5-1 to 5-19

#### Syllabus:

3

**Shear**: Meaning of shear in beams and slabs. IS code specifications. Various forms of shear reinforcement. Use of bent up bars. Zones of minimum shear reinforcement. Numerical problems on design of shear reinforcement in beam.

**Bond**: Meaning of bond as per IS code provisions. Meaning and calculation of development length in tension and compression.

5.1	Introduction5-1
5.2	Nominal Shear Stress $(\tau_{_{\boldsymbol{v}}})$ 5-1
5.3	Design of Shear Strength of Concrete (Clause 40.2 of IS 456-2000)5-1
5.3.1	Maximum Shear Stress (Clause 40.2.3 of IS 456–2000, page 72)5-2
5.3.2	Minimum Shear Reinforcement (Clause 26.5.1.6 of IS 456-2000, page 48)5-2
5.3.3	Maximum Spacing of Stirrups (Clause 26.5.1.5 of IS 456–2000)5-3
5.3.4	Forms of Shear Reinforcement5-3
5.3.5	Design of Shear Reinforcement5-3
5.4	Bond5-4
5.5	Type of Bond5-4
5.6	Bond Stress $(\tau_{bd})$
5.6.1	Design Bond Stress for Plain Bars in Tension5-4
5.6.2	Development Length Ld5-4
5.6.3	Calculation of Development Length5-4
5.6.4	Anchoring Reinforcing Bars5-5
5.6.5	Lapping of Bars5-5
5.6.6	Contribution of Bent Up Bar is Restricted to 50% in Shear Resistance5-5
5.7	Examples5-5
5.8	MSBTE Questions and Answers5-17

## UNIT V

#### Chapter 6: Design of Slabs

6-1 to 6-63

#### Syllabus:

Slabs, support conditions, I.S. specifications regarding main steel, distribution steel, spacing and cover for reinforcement, effective span, minimum reinforcement.

Limit state of serviceability for slabs for deflection criteria only.

Design of one way and cantilever slab including development length check only.

Design of two – way slab with four edges discontinuous and provision of torsion reinforcement at corners (As per IS 456 : 2000, table no 26 case no 9 only.) Check for deflection only.

6.1	Introduction6	<b>i-1</b>
6.2	One Way Slab6	3-1
6.3	Two Way Slab6	ò-1
6.3.1	Support Condition6	i-1
6.4	IS Specification Regarding Spacing and Cover for Reinforcement6	6-1
6.5	Distribution Steel6	3-1
6.6	Design of Simply Supported One Way Slab6	j-2
6.7	Examples6	3-3
6.8	Design of Cantilever Slab6-	25
6.9	Examples6-	25
6.10	Design of Two Way Slab6-	39
6.11	Examples6-	40
6.12	Design of Dog-legged Staircase6-	53
6.13	Examples6-	54
6.14	MSBTE Questions and Answers6-	61

# **UNIT VI**

# Chapter 7 : Design of Axially Loaded Short Columns and Footing 7-1 to 7-44

## Syllabus :

Limit state of collapse in compression, assumptions, effective length, slenderness ratio, short and long columns, and minimum eccentricity.

IS specifications for reinforcement in column.

Load analysis for a column : load on an axially loaded column from beams at a different floor levels in building.

Design of axially loaded short square and rectangular column.

Various RC footings: Isolated and sloped footings, combined footings, piles.

IS specification for reinforcement in footing.

Design of isolated square sloped footing: Flexural design with checks for one-way, two way shear and bond. (Problems on design of footing for bending moment only in theory examination paper.)

7.1	Assumptions in Limit State of Collapse - Compression Clause 38.1 and 39.1 of IS 456 : 2000	
	page No. 69 and 70	.7-1
7.2	Column	.7-1
7.3	Types of Column	.7-1
7.3.1	Short Column	.7-2
7.3.2	Long Column / Slender Column	.7-2
7.3.3	Effective Length of Column	.7-2
7.3.4	Minimum Eccentricity	.7-3
7.4	Calculation of Ultimate Load Carrying Capacity of Axially Loaded Short Rectangular and	
	Circular Column	
7.5	Specification for Reinforcement in Column	.7-4
7.5.1	Main Steel / Longitudinal Reinforcement	.7-4
7.5.2	Transverse Reinforcement or Lateral Ties	.7-4
7.6	Analysis and Design of Axially Loaded Columns	.7-4
7.6.1	Examples	.7-5
7.7	Footing / Foundation	7-22
7.8	Types of Footing	7-22
7.8.1	Isolated Footing	7-23
7.8.2	Combined Footing	7-23
7.8.3	Strap Footing / Cantilever Footing	7-23
7.8.4	Mat Foundation7	7-23
7.9	Design Steps	7-23
7.10	MSBTE Questions and Answers	7-42
	П	ПГ
