

**Unit – I****Chapter 1 : Network Layer & Protocols 1-1 to 1-47**

Syllabus : IP Addressing : Address Space, Notations, Classfull addressing, Classless addressing, Network Address Translation (NAT). Internet Protocol (IP) : Datagram Format, Fragmentation, Options. ICMPv4 : Messages, Debugging Tools, ICMP Checksum. Mobile IP : Addressing, Agents, Three Phases, Inefficiency in Mobile IP. Virtual Private Network : VPN technology.

1.1	Network Layer	1-2	1.3.17	Solved Examples	1-11
1.1.1	Position of Network Layer	1-2	1.4	Classless Addressing in IPv4	1-14
1.1.2	Network Layer Duties	1-2	1.4.1	Variable Length Blocks	1-14
1.2	IPv4 Addresses	1-3	1.4.2	The Slash Notation (CIDR Notation)	1-15
1.2.1	Uniqueness of IP Addresses	1-3	1.4.3	Network Mask	1-16
1.2.2	Address Space	1-3	1.4.4	Extracting the Block Information	1-16
1.2.3	Notation	1-3	1.4.5	Block Allocation	1-18
1.2.4	IPv4 Address Format	1-3	1.4.6	Relation to Classful Addressing	1-18
1.3	Classful Addressing	1-4	1.4.7	Subnetting	1-19
1.3.1	IPv4 Address Classes	1-4	1.4.8	Designing Subnets	1-19
1.3.2	Formats of Various Classes	1-4	1.4.9	Finding Information about Each Network	1-19
1.3.3	How to Recognize Classes ?	1-5	1.4.10	Address Aggregation	1-20
1.3.4	Two Level Addressing	1-5	1.5	Special Addresses	1-21
1.3.5	Extracting Information in a Block	1-6	1.5.1	Special Blocks	1-21
1.3.6	Network Address	1-6	1.5.2	All Zeros Address	1-21
1.3.7	Network Mask or Default Mask	1-7	1.5.3	All One Address-Limited Broadcast Address	1-21
1.3.8	Default Masks for Different Classes	1-7	1.5.4	Loopback Address	1-21
1.3.9	Finding Network Address using Default Mask	1-8	1.5.5	Private Addresses	1-21
1.3.10	Three Level Addressing : Subnetting	1-8	1.5.6	Multicast Addresses	1-22
1.3.11	Special IP Addresses	1-9	1.5.7	Special Addresses in Each Block	1-22
1.3.12	Limitations of IPv4	1-9	1.5.8	Network Address	1-22
1.3.13	Classless Addressing	1-10	1.5.9	Direct Broadcast Address	1-22
1.3.14	Supernetting	1-10	1.6	NAT – Network Address Translation	1-22
1.3.15	Who Decides the IP Addresses ?	1-10	1.7	Internet Protocol Version 4 (IPv4)	1-23
1.3.16	Registered and Unregistered Addresses	1-11	1.7.1	Position of IP	1-23
			1.7.2	Internet Protocol (IP)	1-23
			1.7.3	Datagrams	1-24
			1.7.4	IPv4 Header Format	1-24
			1.8	Fragmentation	1-27
			1.8.1	Maximum Transfer Unit (MTU)	1-27
			1.8.2	Fields Related to Fragmentation	1-28
			1.9	Options 1-28	
			1.9.1	Format	1-28
			1.10	Option Types	1-29

1.10.1	No Operation Option	1-29	1.17	I-Scheme Questions and Answers.....	1-47
1.10.2	End of Option Option	1-30		• Review Questions	1-46
1.10.3	Record-Route Option	1-30	Unit – II		
1.10.4	Strict-Source-Route Option	1-30	<hr/>		
1.10.5	Loose-Source-Root Option	1-31	Chapter 2 : Next Generation IP 2-1 to 2-13		
1.10.6	Time Stamp Option	1-31	<hr/>		
1.11	ICMPv4 (Internet Control Message Protocol)	1-31	Syllabus : IPv6 Addressing : Representation, Address space, Address space allocation, Autoconfiguration, Renumbering. Transition from IPv4 to IPv6 : Dual stack, Tunneling, Header translation. IPv6 protocol : Packet format, Extension header.		
1.11.1	ICMP Encapsulation	1-32	2.1	IPv6 Addressing	2-2
1.11.2	ICMP Messages	1-32	2.1.1	IPv6 Address	2-2
1.11.3	Message Format	1-32	2.1.2	Notations	2-2
1.12	Error Reporting Messages (ICMPv4)	1-32	2.1.3	Abbreviation	2-2
1.12.1	Destination Unreachable	1-33	2.2	Address Space	2-3
1.12.2	Source Quench Error Message	1-34	2.2.1	Three Address Types	2-3
1.12.3	Time Exceeded Error Message	1-35	2.2.2	Broadcasting and Multicasting	2-4
1.12.4	Parameter Problem Error Message	1-35	2.3	Address Space Allocation	2-4
1.12.5	Redirection Error Message	1-35	2.3.1	The First Section	2-4
1.13	Query Messages (ICMPv4)	1-36	2.3.2	Second Section	2-5
1.13.1	Echo Request and Reply	1-36	2.3.3	Algorithm	2-5
1.13.2	Timestamp Request and Reply	1-37	2.3.4	Assigned or Reserved Blocks	2-6
1.13.3	Deprecated Messages	1-37	2.3.5	Unspecified Address	2-6
1.13.4	Checksum	1-38	2.3.6	Loopback Address	2-6
1.14	Debugging Tools	1-38	2.3.7	Difference between Loopback Address of IPv4 and IPv6	2-6
1.14.1	Ping	1-38	2.3.8	Embedded IPv4 Addresses	2-6
1.14.2	Traceroute or Tracert	1-39	2.3.9	Compatible Address	2-6
1.15	Mobile IP	1-41	2.3.10	A Mapped Address	2-7
1.15.1	Addressing	1-41	2.3.11	Calculation of Checksum	2-7
1.15.1.1	Addressing in Stationary Hosts	1-41	2.4	Autoconfiguration	2-7
1.15.1.2	Mobile Hosts	1-41	2.5	Renumbering	2-7
1.15.2	Agents	1-41	2.5.1	Migrating to IPv6 (Compatibility to IPv4)	2-8
1.15.3	Three Phases	1-42	2.5.2	Comparison between IPv4 and IPv6	2-8
1.15.4	Transparency	1-44	2.6	Transition from IPv4 to IPv6	2-9
1.15.5	Inefficiency in Mobile IP	1-44	2.6.1	Transition Strategies	2-9
1.15.6	Remedy	1-45			
1.16	Virtual Private Networking (VPN)	1-46			

2.6.2	Use of IP Addresses	2-10	3.5	Distance Vector Routing Algorithm	3-6
2.7	IPv6 (Next Generation IP)	2-10	3.5.1	Disadvantages	3-8
2.7.1	IPv6 Packet Format	2-10	3.5.2	Looping in Distance Vector Routing Protocol	3-8
2.7.2	Payload	2-11	3.5.3	Count to Infinity Problem	3-9
2.8	Extension Headers	2-12	3.5.4	Split Horizon Algorithm	3-10
2.9	I-Scheme Questions and Answers	2-13	3.6	Link State Routing	3-10
	• Review Questions	2-12	3.6.1	Comparison of Link State Routing and Distance Vector Routing	3-11

Unit – III

Chapter 3 : Unicast & Multicast Routing Protocols

3-1 to 3-44

Syllabus : Introduction : Inter-domain, Intra-domain Routing. Routing Algorithms : Distance vector Routing, Bellman-Ford algorithm, Link State Routing, Path Vector Routing. Unicast Routing Protocols : Internet Structure, Routing Information Protocol (RIP), Open Shortest Path First (OSPF), Border Gateway Protocol Version 4 (BGP4). Introduction : Unicast, Multicast and Broadcast. Intradomain Multicast Protocols : Multicast Distance Vector (DVMRP), Multicast Link State (MOSPF), Protocol Independent Multicast (PIM).

3.1	Routing	3-2	3.7	Least Cost Algorithms	3-12
3.1.1	Types of Routing	3-2	3.8	Bellman-Ford Algorithm	3-13
3.1.2	Intra and Interdomain Routing	3-2	3.9	Path Vector Routing	3-16
3.1.3	Unicast Routing	3-2	3.9.1	Path Vector Messages	3-16
3.1.4	Broadcast Routing	3-3	3.9.2	Loop Prevention	3-17
3.1.5	Multicast Routing	3-3	3.9.3	Path Attributes	3-17
3.2	Routing Algorithms	3-3	3.10	Unicast Routing Protocols	3-17
3.2.1	Desired Properties of a Routing Algorithm	3-4	3.10.1	Routing	3-17
3.2.2	Types of Routing Algorithms	3-4	3.10.2	Cost or Metric	3-17
3.2.3	Optimality Principle	3-4	3.10.3	Routing Tables	3-18
3.3	Static Algorithms	3-4	3.11	Routing Protocols	3-18
3.3.1	Shortest Path Routing	3-4	3.11.1	Unicast Routing Protocols	3-18
3.3.2	Flooding	3-5	3.12	RIP (Routing Information Protocol)	3-18
3.3.3	Flow Based Routing	3-5	3.12.1	RIP Updating Algorithm	3-19
3.4	Dynamic Routing Algorithms	3-6	3.12.2	Initializing the Routing Table	3-19
			3.12.3	Updating the Routing Table	3-19
			3.12.4	RIP Operation	3-19
			3.12.5	RIP Message Format	3-20
			3.13	Request and Response Messages (RIP)	3-20
			3.13.1	Request Message	3-20
			3.13.2	Response Message	3-21
			3.13.3	Timers in RIP	3-21
			3.13.4	RIP Version 2	3-22
			3.13.5	Problems in RIP	3-23
			3.14	OSPF	3-23
			3.14.1	Features of OSPF	3-25

3.14.2	Metric	3-26	3.17.1	Unicasting	3-37
3.14.3	Types of Links	3-26	3.17.2	Multicasting	3-37
3.14.4	Virtual Link	3-27	3.17.3	Broadcasting	3-38
3.14.5	Graphical Representation	3-27	3.17.4	Multiple Unicasting Versus Multicasting	3-38
3.14.6	Link State Advertisements (LSAs)	3-27	3.17.5	Emulation of Multicasting with Unicasting	3-39
3.14.7	OSPF Packet Types	3-28	3.17.6	Applications of Multicasting	3-39
3.14.8	Link State Update Packet	3-29	3.18	Intradomain Routing Protocols	3-39
3.14.9	General LSA Header	3-29	3.19	MOSPF	3-39
3.14.10	Router Link LSA	3-30	3.20	Multicast Distance Vector : DVMRP	3-39
3.14.11	Router Link Packet	3-30	3.21	Core Based Tree (CBT) Protocol	3-42
3.14.12	Network Link LSA	3-30	3.22	PIM (Protocol Independent Multicast)	3-42
3.14.13	Summary Link to Network LSA	3-31	3.23	MBONE (Multicast Backbone)	3-43
3.14.14	Summary Link to AS Boundary Router LSA	3-31	3.24	I-Scheme Questions and Answers.....	3-44
3.14.15	External Link LSA	3-32		• Review Questions	3-43
3.14.16	Other Packets	3-32			
3.14.17	Encapsulation	3-32			
3.14.18	Comparison between RIP and OSPF	3-32			
3.15	Border Gateway Protocol (BGP)	3-33			
3.15.1	Types of Autonomous Systems	3-33			
3.15.2	CIDR	3-33			
3.15.3	Path Attributes	3-33			
3.15.4	Types of Attributes	3-34			
3.16	BGP Sessions	3-34			
3.16.1	External and Internal BGP	3-34			
3.16.2	Types of Messages	3-34			
3.16.3	Packet Format	3-34			
3.16.4	Open Message	3-35			
3.16.5	The Update Message	3-35			
3.16.6	Keepalive Message	3-36			
3.16.7	Notification Message	3-36			
3.16.8	Encapsulation	3-36			
3.16.9	How does BGP Solve the Count to Infinity Problem ?	3-36			
3.17	Multicast Routing Protocols	3-37			

Unit - IV

Chapter 4 : Transport Layer Protocols 4-1 to 4-48

Syllabus : User Datagram Protocol : User Datagram, UDP Services, UDP Applications. Transmission Control Protocol : TCP Services, TCP features, Segment, A TCP Connection, State Transition Diagram, Windows in TCP, Flow Control, Error Control, TCP Congestion Control, TCP Timers, Options. SCTP : SCTP Services, SCTP Features, Packet Format, An SCTP Association, Flow Control, Error Control.

4.1	Introduction	4-2
4.2	Transport Layer Duties and Functionalities	4-2
4.3	User Datagram Protocol (UDP)	4-3
4.3.1	Responsibilities of UDP	4-3
4.3.2	Advantages of UDP	4-3
4.3.3	User Datagram	4-4
4.3.4	UDP Pseudo Header	4-5
4.4	UDP Services	4-6
4.4.1	Process to Process Communication	4-6
4.4.2	Connectionless Services	4-6
4.4.3	Flow and Error Control	4-6

4.4.4	Checksum	4-7	4.11.1	TCP Connection Establishment	4-17
4.4.5	Congestion Control	4-7	4.11.2	Connection Termination Protocol [Connection Release]	4-18
4.4.6	Encapsulation and Decapsulation	4-7	4.11.3	TCP Connection Management	4-18
4.4.7	Queuing	4-7	4.11.4	TCP Connection Release	4-19
4.4.8	Multiplexing and Demultiplexing	4-8	4.12	TCP State Transition Diagram	4-19
4.4.9	Comparison of UDP and Generic Simple Protocol	4-9	4.13	Windows in TCP	4-21
4.5	UDP Applications	4-9	4.13.1	Send Window	4-21
4.6	UDP Features	4-9	4.13.2	Receive Window	4-22
4.6.1	Connectionless Service	4-9	4.14	Flow Control in TCP	4-23
4.6.2	Lack of Error Control	4-9	4.14.1	Opening and Closing Windows	4-23
4.6.3	Lack of Congestion Control	4-9	4.14.2	Shrinking of Windows	4-23
4.6.4	Typical Applications of UDP	4-10	4.14.3	An Example of Flow Control	4-24
4.7	Transmission Control Protocol (TCP)	4-10	4.14.4	Silly Window Syndrome	4-25
4.7.1	Relationship Between TCP and IP	4-10	4.14.5	Nagle's Algorithm	4-25
4.7.2	Ports and Sockets	4-11	4.15	Network Layer Congestion	4-25
4.8	TCP Services	4-12	4.15.1	Congestion	4-26
4.8.1	Process to Process Communication	4-12	4.15.2	Need of Congestion Control	4-27
4.8.2	Stream Delivery Service	4-12	4.15.3	Causes of Congestion	4-27
4.8.3	Sending and Receiving Buffers	4-12	4.15.4	Difference between Congestion Control and Flow Control	4-27
4.8.4	Bytes and Segments	4-13	4.15.5	Principle of Congestion Control	4-27
4.8.5	Full Duplex Service	4-13	4.15.6	Congestion Prevention Policies	4-28
4.8.6	Connection Oriented Service	4-13	4.16	TCP Congestion Control	4-30
4.8.7	Reliable Service	4-13	4.16.1	Slow Start Algorithm	4-31
4.9	Features of TCP	4-13	4.16.2	Internet Congestion Control Algorithm	4-31
4.9.1	Numbering System	4-13	4.16.3	Congestion Avoidance (Additive Increase)	4-32
4.9.2	Flow Control	4-14	4.17	TCP Timers	4-32
4.9.3	Error Control	4-14	4.17.1	Jacobson's Algorithm	4-33
4.9.4	Congestion Control	4-14	4.17.2	Karn's Algorithm	4-33
4.10	The TCP Protocol	4-14	4.17.3	Other Timers in TCP	4-34
4.10.1	TCP Segment	4-15	4.18	Options 4-34	
4.10.2	The TCP Segment Header	4-15	4.18.1	End of Option (EOP)	4-35
4.10.3	Checksum	4-17			
4.10.4	Encapsulation	4-17			
4.11	A TCP Connection	4-17			

4.18.2	No Operation (NOP)	4-35	4.23.3	An SCTP Association	4-43
4.18.3	Maximum Segment Size (MSS)	4-35	4.23.4	Flow Control	4-45
4.18.4	Window Scale Factor	4-35	4.23.5	Error Control	4-45
4.18.5	Timestamp	4-36	4.23.6	Congestion Control	4-46
4.18.6	SACK-Permitted and SACK Options	4-36	4.24	I-Scheme Solved Examples	4-47
4.19	Comparison of UDP and TCP	4-37	4.25	I-Scheme Questions and Answers.....	4-47
4.20	Stream Control Transmission Protocol (SCTP)	4-37		• Review Questions	4-46
4.20.1	UDP Performance for Internet Applications	4-38	Unit – V		
4.20.2	TCP Performance for Internet Applications	4-38	<hr/>		
4.20.3	SCTP Performance for Internet Applications	4-38	Chapter 5 : Application Layer 5-1 to 5-56		
4.21	SCTP Services	4-38	Syllabus : World Wide Web and HTTP. File Transfer. FTP and TFTP Electronic Mail : Architecture. Web-based mail, Email security, SMTP, POP, IMAP and MIME, SNMP. DNS-concept of Domain name space, DNS operation, DHCP-Static and Dynamic Allocation, DHCP operation, Remote Login : TELNET and SSH.		
4.21.1	Process to Process Communication	4-39	5.1	Introduction	5-2
4.21.2	Multiple Streams	4-39	5.1.1	Position of Application Layer	5-2
4.21.3	Multihoming	4-39	5.2	Standard Client Server Applications	5-3
4.21.4	Full Duplex Communication	4-39	5.3	World Wide Web (WWW)	5-3
4.21.5	Connection Oriented Service	4-40	5.3.1	Web from the Users Side	5-3
4.21.6	Reliable Service	4-40	5.3.2	Web from the Servers Side	5-5
4.22	SCTP Features	4-40	5.3.3	WWW Architecture	5-5
4.22.1	Transmission Sequence Number (TSN)	4-40	5.3.4	Browser (Web Client)	5-5
4.22.2	Stream Identifier (SI)	4-40	5.3.5	Server	5-6
4.22.3	Stream Sequence Number (SSN)	4-40	5.3.6	Uniform Resource Locator (URL)	5-6
4.22.4	Packets	4-40	5.3.7	Cookies : User-Server Interaction	5-6
4.22.5	Acknowledgement Number	4-41	5.4	Web Documents	5-7
4.22.6	Flow Control	4-41	5.4.1	Static Documents	5-7
4.22.7	Error Control	4-41	5.4.2	HTML (Hypertext Markup Language)	5-7
4.22.8	Congestion Control	4-41	5.4.3	Dynamic Document	5-7
4.23	Packet Format	4-41	5.4.4	Common Gateway Interface (CGI)	5-8
4.23.1	General Header	4-41	5.4.5	Active Documents	5-8
4.23.2	Chunks	4-42	5.5	HTTP (Hypertext Transfer Protocol)	5-9
			5.5.1	Principle of HTTP Operation	5-9
			5.5.2	The Web and HTTP	5-9

5.5.3	Non-persistent and Persistent Connection	5-10	5.9.2	Message Formats	5-22
5.5.4	HTTP Messages	5-11	5.10	MIME – Multipurpose Internet Mail Extensions	5-23
5.5.5	Request Message	5-11	5.10.1	Principle of MIME	5-23
5.5.6	Methods (Request Type)	5-12	5.11	Message Transfer Agent : SMTP	5-25
5.5.7	Response Message	5-12	5.11.1	Commands and Responses	5-26
5.5.8	Headers	5-13	5.11.2	SMTP (Simple Mail Transfer Protocol)	5-26
5.6	Proxy Server	5-13	5.11.3	Components of E-mail System	5-27
5.6.1	HTTP Security	5-14	5.11.4	SMTP Commands	5-27
5.7	File Transfer Protocol (FTP)	5-14	5.11.5	SMTP Operation	5-27
5.7.1	Communication in FTP	5-15	5.11.6	Comparison of HTTP and SMTP	5-28
5.7.2	File Types	5-15	5.12	Message Access Agent : POP and IMAP	5-28
5.7.3	Data Structure	5-15	5.12.1	POP 3	5-28
5.7.4	Transmission Mode	5-15	5.12.2	IMAP4	5-29
5.7.5	File Transfer	5-16	5.12.3	Comparison of IMAP and POP 3	5-29
5.7.6	FTP Commands	5-16	5.13	Introduction to Network Management	5-29
5.7.7	Anonymous FTP	5-16	5.14	Network Management and its Infrastructure	5-30
5.7.8	Security for FTP	5-16	5.14.1	Introduction	5-30
5.8	TFTP	5-17	5.14.2	Principle Components of a Network Management Architecture	5-30
5.8.1	TFTP Messages	5-17	5.14.3	Managing an Internet	5-30
5.8.2	RRQ Message	5-17	5.14.4	Danger of Hidden Failures	5-31
5.8.3	WRQ Message	5-17	5.14.5	Infrastructure for Network Management	5-31
5.8.4	Data Message	5-18	5.15	Simple Network Management Protocol (SNMP)	5-31
5.8.5	ACK (Acknowledge) Message	5-18	5.15.1	Concept	5-31
5.8.6	ERROR Message	5-18	5.15.2	Managers and Agents	5-32
5.8.7	Connection	5-19	5.15.3	Management Components	5-32
5.8.8	Termination of Connection	5-19	5.16	Structure of Management Information (SMI)	5-32
5.8.9	Data Transfer Phase	5-19	5.16.1	Name	5-33
5.8.10	UDP Ports	5-20	5.16.2	Type	5-33
5.8.11	Security	5-20	5.16.3	Encoding Method	5-33
5.8.12	Applications of TFTP	5-20	5.17	Management Information Base (MIB)	5-33
5.8.13	Advantages	5-20	5.18	Simple Network Management Protocol (SNMP)	5-34
5.8.14	Disadvantages	5-20			
5.8.15	Comparison of FTP and TFTP	5-20			
5.9	Electronic Mail	5-21			
5.9.1	E-mail Architecture and Services	5-21			

5.18.1	Format	5-35	5.25	Host Configuration : DHCP	5-43
5.19	Domain Name System (DNS)	5-36	5.25.1	Previously used Protocols	5-44
5.19.1	How does DNS Work ?	5-37	5.25.2	DHCP	5-44
5.19.2	Name Space	5-37	5.25.3	Advantages of DHCP	5-45
5.19.3	Flat Name Space	5-37	5.25.4	Components of DHCP	5-45
5.19.4	Hierarchical Name Space	5-37	5.25.5	DHCP Operation	5-45
5.20	Domain Name Space	5-37	5.25.6	DHCP Operation on Different Networks	5-46
5.21	Distribution of Name Space	5-38	5.25.7	UDP Ports	5-46
5.21.1	Hierarchy of Name Servers	5-39	5.25.8	Using TFTP	5-47
5.22	DNS in the Internet	5-40	5.25.9	Error Control	5-47
5.22.1	Generic Domains	5-40	5.25.10	Optimizations in DHCP	5-47
5.22.2	Country Domain	5-40	5.25.11	Packet Format	5-47
5.22.3	Inverse Domain	5-40	5.26	Remote Login : TELNET and SSH	5-49
5.23	Name Address Resolution	5-40	5.26.1	TELNET	5-49
5.23.1	Recursive Resolution	5-41	5.26.2	Network Virtual Terminal (NVT)	5-50
5.23.2	Iterative Resolution	5-41	5.26.3	Security Problems of TELNET	5-50
5.23.3	The DNS Message Format	5-42	5.26.4	Secure Shell (SSH)	5-50
